  Message: You have enabled the binary log, but you haven't provided the mandatory server-id. Please refer to the proper server start-up parameters documentation

  ER_BINLOG_NEEDS_SERVERID was added in 8.0.2.

- Error: 10165 SQLSTATE: HY000 (ER_RPL_CANT_MAKE_PATHS)

  Message: Unable to create replication path names: out of memory or path names too long (path name exceeds %d or file name exceeds %d).

  ER_RPL_CANT_MAKE_PATHS was added in 8.0.2.

- Error: 10166 SQLSTATE: HY000 (ER_CANT_INITIALIZE_GTID)

  Message: Failed to initialize GTID structures.

  ER_CANT_INITIALIZE_GTID was added in 8.0.2.

- Error: 10167 SQLSTATE: HY000 (ER_CANT_INITIALIZE_EARLY_PLUGINS)

  Message: Failed to initialize early plugins.

  ER_CANT_INITIALIZE_EARLY_PLUGINS was added in 8.0.2.

- Error: 10168 SQLSTATE: HY000 (ER_CANT_INITIALIZE_BUILTIN_PLUGINS)

  Message: Failed to initialize builtin plugins.

  ER_CANT_INITIALIZE_BUILTIN_PLUGINS was added in 8.0.2.

- Error: 10169 SQLSTATE: HY000 (ER_CANT_INITIALIZE_DYNAMIC_PLUGINS)

  Message: Failed to initialize dynamic plugins.

  ER_CANT_INITIALIZE_DYNAMIC_PLUGINS was added in 8.0.2.

- Error: 10170 SQLSTATE: HY000 (ER_PERFSCHEMA_INIT_FAILED)

  Message: Performance schema disabled (reason: init failed).

  ER_PERFSCHEMA_INIT_FAILED was added in 8.0.2.

- Error: 10171 SQLSTATE: HY000 (ER_STACKSIZE_UNEXPECTED)

  Message: Asked for %lu thread stack, but got %ld

  ER_STACKSIZE_UNEXPECTED was added in 8.0.2.

- Error: 10172 SQLSTATE: HY000 (ER_CANT_SET_DATADIR)

  Message: failed to set datadir to %s

ER_CANT_SET_DATADIR was added in 8.0.2.

- Error: 10173 SQLSTATE: HY000 (ER_CANT_STAT_DATADIR)

  Message: Can't read data directory's stats (%d): %s. Assuming that it's not owned by the same user/group

  ER_CANT_STAT_DATADIR was added in 8.0.2.

- Error: 10174 SQLSTATE: HY000 (ER_CANT_CHOWN_DATADIR)

  Message: Can't change data directory owner to %s

  ER_CANT_CHOWN_DATADIR was added in 8.0.2.

- Error: 10175 SQLSTATE: HY000 (ER_CANT_SET_UP_PERSISTED_VALUES)

  Message: Setting persistent options failed.

  ER_CANT_SET_UP_PERSISTED_VALUES was added in 8.0.2.

- Error: 10176 SQLSTATE: HY000 (ER_CANT_SAVE_GTIDS)

  Message: Failed to save the set of Global Transaction Identifiers of the last binary log into the mysql.gtid_executed table while the server was shutting down. The next server restart will make another attempt to save Global Transaction Identifiers into the table.

  ER_CANT_SAVE_GTIDS was added in 8.0.2.

- Error: 10177 SQLSTATE: HY000 (ER_AUTH_CANT_SET_DEFAULT_PLUGIN)

  Message: Can't start server: Invalid value for --default-authentication-plugin

  ER_AUTH_CANT_SET_DEFAULT_PLUGIN was added in 8.0.2.

- Error: 10178 SQLSTATE: HY000 (ER_CANT_JOIN_SHUTDOWN_THREAD)

  Message: Could not join %sthread. error:%d

  ER_CANT_JOIN_SHUTDOWN_THREAD was added in 8.0.2.

- Error: 10179 SQLSTATE: HY000 (ER_CANT_HASH_DO_AND_IGNORE_RULES)

  Message: An error occurred while building do_table and ignore_table rules to hashes for global replication filter.

  ER_CANT_HASH_DO_AND_IGNORE_RULES was added in 8.0.2.

- Error: 10180 SQLSTATE: HY000 (ER_CANT_OPEN_CA)

  Message: Error opening CA certificate file

  ER_CANT_OPEN_CA was added in 8.0.2.

- Error: 10181 SQLSTATE: HY000 (ER_CANT_ACCESS_CAPATH)

  Message: Error accessing directory pointed by --ssl-capath

  ER_CANT_ACCESS_CAPATH was added in 8.0.2.

- Error: 10182 SQLSTATE: HY000 (ER_SSL_TRYING_DATADIR_DEFAULTS)

  Message: Found %s, %s and %s in data directory. Trying to enable SSL support using them.

ER_SSL_TRYING_DATADIR_DEFAULTS was added in 8.0.2.

- Error: 10183 SQLSTATE: HY000 (ER_AUTO_OPTIONS_FAILED)

  Message: Failed to create %s(file: '%s', errno %d)

  ER_AUTO_OPTIONS_FAILED was added in 8.0.2.

- Error: 10184 SQLSTATE: HY000 (ER_CANT_INIT_TIMER)

  Message: Failed to initialize timer component (errno %d).

  ER_CANT_INIT_TIMER was added in 8.0.2.

- Error: 10185 SQLSTATE: HY000 (ER_SERVERID_TOO_LARGE)

  Message: server-id configured is too large to represent with server-id-bits configured.

  ER_SERVERID_TOO_LARGE was added in 8.0.2.

- Error: 10186 SQLSTATE: HY000 (ER_DEFAULT_SE_UNAVAILABLE)

  Message: Default%s storage engine (%s) is not available

  ER_DEFAULT_SE_UNAVAILABLE was added in 8.0.2.

- Error: 10187 SQLSTATE: HY000 (ER_CANT_OPEN_ERROR_LOG)

  Message: Could not open file '%s' for error logging%s%s

  ER_CANT_OPEN_ERROR_LOG was added in 8.0.2.

- Error: 10188 SQLSTATE: HY000 (ER_INVALID_ERROR_LOG_NAME)

  Message: Invalid log file name after expanding symlinks: '%s'

  ER_INVALID_ERROR_LOG_NAME was added in 8.0.2.

- Error: 10189 SQLSTATE: HY000 (ER_RPL_INFINITY_DENIED)

  Message: using --replicate-same-server-id in conjunction with --log-slave-updates is impossible, it would lead to infinite loops in this server.

  ER_RPL_INFINITY_DENIED was added in 8.0.2.

- Error: 10190 SQLSTATE: HY000 (ER_RPL_INFINITY_IGNORED)

  Message: using --replicate-same-server-id in conjunction with --log-slave-updates would lead to infinite loops in this server. However this will be ignored as the --log-bin option is not defined.

  ER_RPL_INFINITY_IGNORED was added in 8.0.2.

- Error: 10191 SQLSTATE: HY000 (ER_NDB_TABLES_NOT_READY)

  Message: NDB : Tables not available after %lu seconds. Consider increasing --ndb-wait-setup value

  ER_NDB_TABLES_NOT_READY was added in 8.0.2.

- Error: 10192 SQLSTATE: HY000 (ER_TABLE_CHECK_INTACT)

  Message: %s

  ER_TABLE_CHECK_INTACT was added in 8.0.2.

- Error: 10193 SQLSTATE: HY000 (ER_DD_TABLESPACE_NOT_FOUND)

  Message: Unable to start server. The data dictionary tablespace '%s' does not exist.

  ER_DD_TABLESPACE_NOT_FOUND was added in 8.0.2.

- Error: 10194 SQLSTATE: HY000 (ER_DD_TRG_CONNECTION_COLLATION_MISSING)

  Message: Connection collation is missing for trigger of table %s. Using default connection collation.

  ER_DD_TRG_CONNECTION_COLLATION_MISSING was added in 8.0.2.

- Error: 10195 SQLSTATE: HY000 (ER_DD_TRG_DB_COLLATION_MISSING)

  Message: Database collation is missing for trigger of table %s. Using Default character set.

  ER_DD_TRG_DB_COLLATION_MISSING was added in 8.0.2.

- Error: 10196 SQLSTATE: HY000 (ER_DD_TRG_DEFINER_OOM)

  Message: Error in Memory allocation for Definer %s for Trigger.

  ER_DD_TRG_DEFINER_OOM was added in 8.0.2.

- Error: 10197 SQLSTATE: HY000 (ER_DD_TRG_FILE_UNREADABLE)

  Message: Error in reading %s.TRG file.

  ER_DD_TRG_FILE_UNREADABLE was added in 8.0.2.

- Error: 10198 SQLSTATE: HY000 (ER_TRG_CANT_PARSE)

  Message: Error in parsing Triggers from %s.TRG file.

  ER_TRG_CANT_PARSE was added in 8.0.2.

- Error: 10199 SQLSTATE: HY000 (ER_DD_TRG_CANT_ADD)

  Message: Error in creating DD entry for Trigger %s.%s

  ER_DD_TRG_CANT_ADD was added in 8.0.2.

- Error: 10200 SQLSTATE: HY000 (ER_DD_CANT_RESOLVE_VIEW)

  Message: Resolving dependency for the view '%s.%s' failed. View is no more valid to use

  ER_DD_CANT_RESOLVE_VIEW was added in 8.0.2.

- Error: 10201 SQLSTATE: HY000 (ER_DD_VIEW_WITHOUT_DEFINER)

  Message: %s.%s has no definer (as per an old view format). Current user is used as definer. Please recreate the view.

  ER_DD_VIEW_WITHOUT_DEFINER was added in 8.0.2.

- Error: 10202 SQLSTATE: HY000 (ER_PLUGIN_INIT_FAILED)

  Message: Plugin '%s' init function returned error.

  ER_PLUGIN_INIT_FAILED was added in 8.0.2.

- Error: 10203 SQLSTATE: HY000 (ER_RPL_TRX_DELEGATES_INIT_FAILED)

  Message: Initialization of transaction delegates failed. Please report a bug.

ER_RPL_TRX_DELEGATES_INIT_FAILED was added in 8.0.2.

- Error: 10204 SQLSTATE: HY000 (ER_RPL_BINLOG_STORAGE_DELEGATES_INIT_FAILED)

  Message: Initialization binlog storage delegates failed. Please report a bug.

  ER_RPL_BINLOG_STORAGE_DELEGATES_INIT_FAILED was added in 8.0.2.
- Error: 10205 SQLSTATE: HY000 (ER_RPL_BINLOG_TRANSMIT_DELEGATES_INIT_FAILED)

  Message: Initialization of binlog transmit delegates failed. Please report a bug.

  ER_RPL_BINLOG_TRANSMIT_DELEGATES_INIT_FAILED was added in 8.0.2.
- Error: 10206 SQLSTATE: HY000 (ER_RPL_BINLOG_RELAY_DELEGATES_INIT_FAILED)

  Message: Initialization binlog relay IO delegates failed. Please report a bug.

  ER_RPL_BINLOG_RELAY_DELEGATES_INIT_FAILED was added in 8.0.2.
- Error: 10207 SQLSTATE: HY000 (ER_RPL_PLUGIN_FUNCTION_FAILED)

  Message: Run function '...' in plugin '%s' failed

  ER_RPL_PLUGIN_FUNCTION_FAILED was added in 8.0.2.
- Error: 10208 SQLSTATE: HY000 (ER_SQL_HA_READ_FAILED)

  Message: mysql_ha_read: Got error %d when reading table '%s'

  ER_SQL_HA_READ_FAILED was added in 8.0.2.
- Error: 10209 SQLSTATE: HY000 (ER_SR_BOGUS_VALUE)

  Message: Stored routine '%s'.'%s': invalid value in column %s.

  ER_SR_BOGUS_VALUE was added in 8.0.2.
- Error: 10210 SQLSTATE: HY000 (ER_SR_INVALID_CONTEXT)

  Message: Invalid creation context '%s.%s'.

  ER_SR_INVALID_CONTEXT was added in 8.0.2.
- Error: 10211 SQLSTATE: HY000 (ER_READING_TABLE_FAILED)

  Message: Got error %d when reading table '%s'

  ER_READING_TABLE_FAILED was added in 8.0.2.
- Error: 10212 SQLSTATE: HY000 (ER_DES_FILE_WRONG_KEY)

  Message: load_des_file: Found wrong key_number: %c

  ER_DES_FILE_WRONG_KEY was added in 8.0.2.
- Error: 10213 SQLSTATE: HY000 (ER_CANT_SET_PERSISTED)

  Message: Failed to set persisted options.

  ER_CANT_SET_PERSISTED was added in 8.0.2.
- Error: 10214 SQLSTATE: HY000 (ER_JSON_PARSE_ERROR)

Message: JSON parsing error

`ER_JSON_PARSE_ERROR` was added in 8.0.2.

- Error: `10215` SQLSTATE: `HY000` (`ER_CONFIG_OPTION_WITHOUT_GROUP`)

  Message: Found option without preceding group in config file

  `ER_CONFIG_OPTION_WITHOUT_GROUP` was added in 8.0.2.

- Error: `10216` SQLSTATE: `HY000` (`ER_VALGRIND_DO_QUICK_LEAK_CHECK`)

  Message: VALGRIND_DO_QUICK_LEAK_CHECK

  `ER_VALGRIND_DO_QUICK_LEAK_CHECK` was added in 8.0.2.

- Error: `10217` SQLSTATE: `HY000` (`ER_VALGRIND_COUNT_LEAKS`)

  Message: VALGRIND_COUNT_LEAKS reports %lu leaked bytes for query '%.*s'

  `ER_VALGRIND_COUNT_LEAKS` was added in 8.0.2.

- Error: `10218` SQLSTATE: `HY000` (`ER_LOAD_DATA_INFILE_FAILED_IN_UNEXPECTED_WAY`)

  Message: LOAD DATA INFILE in the slave SQL Thread can only read from --slave-load-tmpdir. Please, report a bug.

  `ER_LOAD_DATA_INFILE_FAILED_IN_UNEXPECTED_WAY` was added in 8.0.2.

- Error: `10219` SQLSTATE: `HY000` (`ER_UNKNOWN_ERROR_NUMBER`)

  Message: Got unknown error: %d

  `ER_UNKNOWN_ERROR_NUMBER` was added in 8.0.2.

- Error: `10220` SQLSTATE: `HY000` (`ER_UDF_CANT_ALLOC_FOR_STRUCTURES`)

  Message: Can't allocate memory for udf structures

  `ER_UDF_CANT_ALLOC_FOR_STRUCTURES` was added in 8.0.2.

- Error: `10221` SQLSTATE: `HY000` (`ER_UDF_CANT_ALLOC_FOR_FUNCTION`)

  Message: Can't alloc memory for udf function: '%s'

  `ER_UDF_CANT_ALLOC_FOR_FUNCTION` was added in 8.0.2.

- Error: `10222` SQLSTATE: `HY000` (`ER_UDF_INVALID_ROW_IN_FUNCTION_TABLE`)

  Message: Invalid row in mysql.func table for function '%s'

  `ER_UDF_INVALID_ROW_IN_FUNCTION_TABLE` was added in 8.0.2.

- Error: `10223` SQLSTATE: `HY000` (`ER_UDF_CANT_OPEN_FUNCTION_TABLE`)

  Message: Can't open the mysql.func table. Please run mysql_upgrade to create it.

  `ER_UDF_CANT_OPEN_FUNCTION_TABLE` was added in 8.0.2.

- Error: `10224` SQLSTATE: `HY000` (`ER_XA_RECOVER_FOUND_TRX_IN_SE`)

  Message: Found %d prepared transaction(s) in %s

  `ER_XA_RECOVER_FOUND_TRX_IN_SE` was added in 8.0.2.

- Error: 10225 SQLSTATE: HY000 (ER_XA_RECOVER_FOUND_XA_TRX)

  Message: Found %d prepared XA transactions

  ER_XA_RECOVER_FOUND_XA_TRX was added in 8.0.2.

- Error: 10226 SQLSTATE: HY000 (ER_XA_IGNORING_XID)

  Message: ignore xid %s

  ER_XA_IGNORING_XID was added in 8.0.2.

- Error: 10227 SQLSTATE: HY000 (ER_XA_COMMITTING_XID)

  Message: commit xid %s

  ER_XA_COMMITTING_XID was added in 8.0.2.

- Error: 10228 SQLSTATE: HY000 (ER_XA_ROLLING_BACK_XID)

  Message: rollback xid %s

  ER_XA_ROLLING_BACK_XID was added in 8.0.2.

- Error: 10229 SQLSTATE: HY000 (ER_XA_STARTING_RECOVERY)

  Message: Starting crash recovery...

  ER_XA_STARTING_RECOVERY was added in 8.0.2.

- Error: 10230 SQLSTATE: HY000 (ER_XA_NO_MULTI_2PC_HEURISTIC_RECOVER)

  Message: --tc-heuristic-recover rollback strategy is not safe on systems with more than one 2-phase-commit-capable storage engine. Aborting crash recovery.

  ER_XA_NO_MULTI_2PC_HEURISTIC_RECOVER was added in 8.0.2.

- Error: 10231 SQLSTATE: HY000 (ER_XA_RECOVER_EXPLANATION)

  Message: Found %d prepared transactions! It means that mysqld was not shut down properly last time and critical recovery information (last binlog or %s file) was manually deleted after a crash. You have to start mysqld with --tc-heuristic-recover switch to commit or rollback pending transactions.

  ER_XA_RECOVER_EXPLANATION was added in 8.0.2.

- Error: 10232 SQLSTATE: HY000 (ER_XA_RECOVERY_DONE)

  Message: Crash recovery finished.

  ER_XA_RECOVERY_DONE was added in 8.0.2.

- Error: 10233 SQLSTATE: HY000 (ER_TRX_GTID_COLLECT_REJECT)

  Message: Failed to collect GTID to send in the response packet!

  ER_TRX_GTID_COLLECT_REJECT was added in 8.0.2.

- Error: 10234 SQLSTATE: HY000 (ER_SQL_AUTHOR_DEFAULT_ROLES_FAIL)

  Message: MYSQL.DEFAULT_ROLES couldn't be updated for authorization identifier %s

  ER_SQL_AUTHOR_DEFAULT_ROLES_FAIL was added in 8.0.2.

- Error: 10235 SQLSTATE: HY000 (ER_SQL_USER_TABLE_CREATE_WARNING)

Message: Following users were specified in CREATE USER IF NOT EXISTS but they already exist. Corresponding entry in binary log used default authentication plugin '%s' to rewrite authentication information (if any) for them: %s

`ER_SQL_USER_TABLE_CREATE_WARNING` was added in 8.0.2.

- Error: `10236` SQLSTATE: `HY000` (`ER_SQL_USER_TABLE_ALTER_WARNING`)

  Message: Following users were specified in ALTER USER IF EXISTS but they do not exist. Corresponding entry in binary log used default authentication plugin '%s' to rewrite authentication information (if any) for them: %s

  `ER_SQL_USER_TABLE_ALTER_WARNING` was added in 8.0.2.

- Error: `10237` SQLSTATE: `HY000` (`ER_ROW_IN_WRONG_PARTITION_PLEASE_REPAIR`)

  Message: Table '%s' corrupted: row in wrong partition: %s -- Please REPAIR the table!

  `ER_ROW_IN_WRONG_PARTITION_PLEASE_REPAIR` was added in 8.0.2.

- Error: `10238` SQLSTATE: `HY000` (`ER_MYISAM_CRASHED_ERROR_IN_THREAD`)

  Message: Got an error from thread_id=%u, %s:%d

  `ER_MYISAM_CRASHED_ERROR_IN_THREAD` was added in 8.0.2.

- Error: `10239` SQLSTATE: `HY000` (`ER_MYISAM_CRASHED_ERROR_IN`)

  Message: Got an error from unknown thread, %s:%d

  `ER_MYISAM_CRASHED_ERROR_IN` was added in 8.0.2.

- Error: `10240` SQLSTATE: `HY000` (`ER_TOO_MANY_STORAGE_ENGINES`)

  Message: Too many storage engines!

  `ER_TOO_MANY_STORAGE_ENGINES` was added in 8.0.2.

- Error: `10241` SQLSTATE: `HY000` (`ER_SE_TYPECODE_CONFLICT`)

  Message: Storage engine '%s' has conflicting typecode. Assigning value %d.

  `ER_SE_TYPECODE_CONFLICT` was added in 8.0.2.

- Error: `10242` SQLSTATE: `HY000` (`ER_TRX_WRITE_SET_OOM`)

  Message: Out of memory on transaction write set extraction

  `ER_TRX_WRITE_SET_OOM` was added in 8.0.2.

- Error: `10243` SQLSTATE: `HY000` (`ER_HANDLERTON_OOM`)

  Message: Unable to allocate memory for plugin '%s' handlerton.

  `ER_HANDLERTON_OOM` was added in 8.0.2.

- Error: `10244` SQLSTATE: `HY000` (`ER_CONN_SHM_LISTENER`)

  Message: Shared memory setting up listener

  `ER_CONN_SHM_LISTENER` was added in 8.0.2.

- Error: `10245` SQLSTATE: `HY000` (`ER_CONN_SHM_CANT_CREATE_SERVICE`)

Message: Can't create shared memory service: %s. : %s

ER_CONN_SHM_CANT_CREATE_SERVICE was added in 8.0.2.

- Error: 10246 SQLSTATE: HY000 (ER_CONN_SHM_CANT_CREATE_CONNECTION)

  Message: Can't create shared memory connection: %s. : %s

  ER_CONN_SHM_CANT_CREATE_CONNECTION was added in 8.0.2.

- Error: 10247 SQLSTATE: HY000 (ER_CONN_PIP_CANT_CREATE_EVENT)

  Message: Can't create event, last error=%u

  ER_CONN_PIP_CANT_CREATE_EVENT was added in 8.0.2.

- Error: 10248 SQLSTATE: HY000 (ER_CONN_PIP_CANT_CREATE_PIPE)

  Message: Can't create new named pipe!: %s

  ER_CONN_PIP_CANT_CREATE_PIPE was added in 8.0.2.

- Error: 10249 SQLSTATE: HY000 (ER_CONN_PER_THREAD_NO_THREAD)

  Message: Can't create thread to handle new connection(errno= %d)

  ER_CONN_PER_THREAD_NO_THREAD was added in 8.0.2.

- Error: 10250 SQLSTATE: HY000 (ER_CONN_TCP_NO_SOCKET)

  Message: Failed to create a socket for %s '%s': errno: %d.

  ER_CONN_TCP_NO_SOCKET was added in 8.0.2.

- Error: 10251 SQLSTATE: HY000 (ER_CONN_TCP_CREATED)

  Message: Server socket created on IP: '%s'.

  ER_CONN_TCP_CREATED was added in 8.0.2.

- Error: 10252 SQLSTATE: HY000 (ER_CONN_TCP_ADDRESS)

  Message: Server hostname (bind-address): '%s'; port: %d

  ER_CONN_TCP_ADDRESS was added in 8.0.2.

- Error: 10253 SQLSTATE: HY000 (ER_CONN_TCP_IPV6_AVAILABLE)

  Message: IPv6 is available.

  ER_CONN_TCP_IPV6_AVAILABLE was added in 8.0.2.

- Error: 10254 SQLSTATE: HY000 (ER_CONN_TCP_IPV6_UNAVAILABLE)

  Message: IPv6 is not available.

  ER_CONN_TCP_IPV6_UNAVAILABLE was added in 8.0.2.

- Error: 10255 SQLSTATE: HY000 (ER_CONN_TCP_ERROR_WITH_STRERROR)

  Message: Can't create IP socket: %s

  ER_CONN_TCP_ERROR_WITH_STRERROR was added in 8.0.2.

- Error: 10256 SQLSTATE: HY000 (ER_CONN_TCP_CANT_RESOLVE_HOSTNAME)

  Message: Can't start server: cannot resolve hostname!

  ER_CONN_TCP_CANT_RESOLVE_HOSTNAME was added in 8.0.2.

- Error: 10257 SQLSTATE: HY000 (ER_CONN_TCP_IS_THERE_ANOTHER_USING_PORT)

  Message: Do you already have another mysqld server running on port: %d ?

  ER_CONN_TCP_IS_THERE_ANOTHER_USING_PORT was added in 8.0.2.

- Error: 10258 SQLSTATE: HY000 (ER_CONN_UNIX_IS_THERE_ANOTHER_USING_SOCKET)

  Message: Do you already have another mysqld server running on socket: %s ?

  ER_CONN_UNIX_IS_THERE_ANOTHER_USING_SOCKET was added in 8.0.2.

- Error: 10259 SQLSTATE: HY000 (ER_CONN_UNIX_PID_CLAIMED_SOCKET_FILE)

  Message: Another process with pid %d is using unix socket file.

  ER_CONN_UNIX_PID_CLAIMED_SOCKET_FILE was added in 8.0.2.

- Error: 10260 SQLSTATE: HY000 (ER_CONN_TCP_CANT_RESET_V6ONLY)

  Message: Failed to reset IPV6_V6ONLY flag (error: %d). The server will listen to IPv6 addresses only.

  ER_CONN_TCP_CANT_RESET_V6ONLY was added in 8.0.2.

- Error: 10261 SQLSTATE: HY000 (ER_CONN_TCP_BIND_RETRY)

  Message: Retrying bind on TCP/IP port %u

  ER_CONN_TCP_BIND_RETRY was added in 8.0.2.

- Error: 10262 SQLSTATE: HY000 (ER_CONN_TPC_BIND_FAIL)

  Message: Can't start server: Bind on TCP/IP port: %s

  ER_CONN_TPC_BIND_FAIL was added in 8.0.2, removed after 8.0.11.

- Error: 10262 SQLSTATE: HY000 (ER_CONN_TCP_BIND_FAIL)

  Message: Can't start server: Bind on TCP/IP port: %s

  ER_CONN_TCP_BIND_FAIL was added in 8.0.12.

- Error: 10263 SQLSTATE: HY000 (ER_CONN_TCP_IP_NOT_LOGGED)

  Message: Fails to print out IP-address.

  ER_CONN_TCP_IP_NOT_LOGGED was added in 8.0.2.

- Error: 10264 SQLSTATE: HY000 (ER_CONN_TCP_RESOLVE_INFO)

  Message: - '%s' resolves to '%s';

  ER_CONN_TCP_RESOLVE_INFO was added in 8.0.2.

- Error: 10265 SQLSTATE: HY000 (ER_CONN_TCP_START_FAIL)

  Message: Can't start server: listen() on TCP/IP port: %s

ER_CONN_TCP_START_FAIL was added in 8.0.2.

- Error: 10266 SQLSTATE: HY000 (ER_CONN_TCP_LISTEN_FAIL)

  Message: listen() on TCP/IP failed with error %d

  ER_CONN_TCP_LISTEN_FAIL was added in 8.0.2.

- Error: 10267 SQLSTATE: HY000 (ER_CONN_UNIX_PATH_TOO_LONG)

  Message: The socket file path is too long (> %u): %s

  ER_CONN_UNIX_PATH_TOO_LONG was added in 8.0.2.

- Error: 10268 SQLSTATE: HY000 (ER_CONN_UNIX_LOCK_FILE_FAIL)

  Message: Unable to setup unix socket lock file.

  ER_CONN_UNIX_LOCK_FILE_FAIL was added in 8.0.2.

- Error: 10269 SQLSTATE: HY000 (ER_CONN_UNIX_NO_FD)

  Message: Can't start server: UNIX Socket : %s

  ER_CONN_UNIX_NO_FD was added in 8.0.2.

- Error: 10270 SQLSTATE: HY000 (ER_CONN_UNIX_NO_BIND_NO_START)

  Message: Can't start server : Bind on unix socket: %s

  ER_CONN_UNIX_NO_BIND_NO_START was added in 8.0.2.

- Error: 10271 SQLSTATE: HY000 (ER_CONN_UNIX_LISTEN_FAILED)

  Message: listen() on Unix socket failed with error %d

  ER_CONN_UNIX_LISTEN_FAILED was added in 8.0.2.

- Error: 10272 SQLSTATE: HY000 (ER_CONN_UNIX_LOCK_FILE_GIVING_UP)

  Message: Unable to create unix socket lock file %s after retries.

  ER_CONN_UNIX_LOCK_FILE_GIVING_UP was added in 8.0.2.

- Error: 10273 SQLSTATE: HY000 (ER_CONN_UNIX_LOCK_FILE_CANT_CREATE)

  Message: Could not create unix socket lock file %s.

  ER_CONN_UNIX_LOCK_FILE_CANT_CREATE was added in 8.0.2.

- Error: 10274 SQLSTATE: HY000 (ER_CONN_UNIX_LOCK_FILE_CANT_OPEN)

  Message: Could not open unix socket lock file %s.

  ER_CONN_UNIX_LOCK_FILE_CANT_OPEN was added in 8.0.2.

- Error: 10275 SQLSTATE: HY000 (ER_CONN_UNIX_LOCK_FILE_CANT_READ)

  Message: Could not read unix socket lock file %s.

  ER_CONN_UNIX_LOCK_FILE_CANT_READ was added in 8.0.2.

- Error: 10276 SQLSTATE: HY000 (ER_CONN_UNIX_LOCK_FILE_EMPTY)

Message: Unix socket lock file is empty %s.

`ER_CONN_UNIX_LOCK_FILE_EMPTY` was added in 8.0.2.

- Error: `10277` SQLSTATE: `HY000` (`ER_CONN_UNIX_LOCK_FILE_PIDLESS`)

  Message: Invalid pid in unix socket lock file %s.

  `ER_CONN_UNIX_LOCK_FILE_PIDLESS` was added in 8.0.2.

- Error: `10278` SQLSTATE: `HY000` (`ER_CONN_UNIX_LOCK_FILE_CANT_WRITE`)

  Message: Could not write unix socket lock file %s errno %d.

  `ER_CONN_UNIX_LOCK_FILE_CANT_WRITE` was added in 8.0.2.

- Error: `10279` SQLSTATE: `HY000` (`ER_CONN_UNIX_LOCK_FILE_CANT_DELETE`)

  Message: Could not remove unix socket lock file %s errno %d.

  `ER_CONN_UNIX_LOCK_FILE_CANT_DELETE` was added in 8.0.2.

- Error: `10280` SQLSTATE: `HY000` (`ER_CONN_UNIX_LOCK_FILE_CANT_SYNC`)

  Message: Could not sync unix socket lock file %s errno %d.

  `ER_CONN_UNIX_LOCK_FILE_CANT_SYNC` was added in 8.0.2.

- Error: `10281` SQLSTATE: `HY000` (`ER_CONN_UNIX_LOCK_FILE_CANT_CLOSE`)

  Message: Could not close unix socket lock file %s errno %d.

  `ER_CONN_UNIX_LOCK_FILE_CANT_CLOSE` was added in 8.0.2.

- Error: `10282` SQLSTATE: `HY000` (`ER_CONN_SOCKET_SELECT_FAILED`)

  Message: mysqld: Got error %d from select

  `ER_CONN_SOCKET_SELECT_FAILED` was added in 8.0.2.

- Error: `10283` SQLSTATE: `HY000` (`ER_CONN_SOCKET_ACCEPT_FAILED`)

  Message: Error in accept: %s

  `ER_CONN_SOCKET_ACCEPT_FAILED` was added in 8.0.2.

- Error: `10284` SQLSTATE: `HY000` (`ER_AUTH_RSA_CANT_FIND`)

  Message: RSA %s key file not found: %s. Some authentication plugins will not work.

  `ER_AUTH_RSA_CANT_FIND` was added in 8.0.2.

- Error: `10285` SQLSTATE: `HY000` (`ER_AUTH_RSA_CANT_PARSE`)

  Message: Failure to parse RSA %s key (file exists): %s: %s

  `ER_AUTH_RSA_CANT_PARSE` was added in 8.0.2.

- Error: `10286` SQLSTATE: `HY000` (`ER_AUTH_RSA_CANT_READ`)

  Message: Failure to read key file: %s

  `ER_AUTH_RSA_CANT_READ` was added in 8.0.2.

- Error: 10287 SQLSTATE: HY000 (ER_AUTH_RSA_FILES_NOT_FOUND)

  Message: RSA key files not found. Some authentication plugins will not work.

  ER_AUTH_RSA_FILES_NOT_FOUND was added in 8.0.2.

- Error: 10288 SQLSTATE: HY000 (ER_CONN_ATTR_TRUNCATED)

  Message: Connection attributes of length %lu were truncated (%d bytes lost) for connection %llu, user %s@%s (as %s), auth: %s

  ER_CONN_ATTR_TRUNCATED was added in 8.0.2.

- Error: 10289 SQLSTATE: HY000 (ER_X509_CIPHERS_MISMATCH)

  Message: X509 ciphers mismatch: should be '%s' but is '%s'

  ER_X509_CIPHERS_MISMATCH was added in 8.0.2.

- Error: 10290 SQLSTATE: HY000 (ER_X509_ISSUER_MISMATCH)

  Message: X509 issuer mismatch: should be '%s' but is '%s'

  ER_X509_ISSUER_MISMATCH was added in 8.0.2.

- Error: 10291 SQLSTATE: HY000 (ER_X509_SUBJECT_MISMATCH)

  Message: X509 subject mismatch: should be '%s' but is '%s'

  ER_X509_SUBJECT_MISMATCH was added in 8.0.2.

- Error: 10292 SQLSTATE: HY000 (ER_AUTH_CANT_ACTIVATE_ROLE)

  Message: Failed to activate default role %s for %s

  ER_AUTH_CANT_ACTIVATE_ROLE was added in 8.0.2.

- Error: 10293 SQLSTATE: HY000 (ER_X509_NEEDS_RSA_PRIVKEY)

  Message: Could not generate RSA private key required for X509 certificate.

  ER_X509_NEEDS_RSA_PRIVKEY was added in 8.0.2.

- Error: 10294 SQLSTATE: HY000 (ER_X509_CANT_WRITE_KEY)

  Message: Could not write key file: %s

  ER_X509_CANT_WRITE_KEY was added in 8.0.2.

- Error: 10295 SQLSTATE: HY000 (ER_X509_CANT_CHMOD_KEY)

  Message: Could not set file permission for %s

  ER_X509_CANT_CHMOD_KEY was added in 8.0.2.

- Error: 10296 SQLSTATE: HY000 (ER_X509_CANT_READ_CA_KEY)

  Message: Could not read CA key file: %s

  ER_X509_CANT_READ_CA_KEY was added in 8.0.2.

- Error: 10297 SQLSTATE: HY000 (ER_X509_CANT_READ_CA_CERT)

  Message: Could not read CA certificate file: %s

ER_X509_CANT_READ_CA_CERT was added in 8.0.2.

- Error: 10298 SQLSTATE: HY000 (ER_X509_CANT_CREATE_CERT)

  Message: Could not generate X509 certificate.

  ER_X509_CANT_CREATE_CERT was added in 8.0.2.

- Error: 10299 SQLSTATE: HY000 (ER_X509_CANT_WRITE_CERT)

  Message: Could not write certificate file: %s

  ER_X509_CANT_WRITE_CERT was added in 8.0.2.

- Error: 10300 SQLSTATE: HY000 (ER_AUTH_CANT_CREATE_RSA_PAIR)

  Message: Could not generate RSA Private/Public key pair

  ER_AUTH_CANT_CREATE_RSA_PAIR was added in 8.0.2.

- Error: 10301 SQLSTATE: HY000 (ER_AUTH_CANT_WRITE_PRIVKEY)

  Message: Could not write private key file: %s

  ER_AUTH_CANT_WRITE_PRIVKEY was added in 8.0.2.

- Error: 10302 SQLSTATE: HY000 (ER_AUTH_CANT_WRITE_PUBKEY)

  Message: Could not write public key file: %s

  ER_AUTH_CANT_WRITE_PUBKEY was added in 8.0.2.

- Error: 10303 SQLSTATE: HY000 (ER_AUTH_SSL_CONF_PREVENTS_CERT_GENERATION)

  Message: Skipping generation of SSL certificates as options related to SSL are specified.

  ER_AUTH_SSL_CONF_PREVENTS_CERT_GENERATION was added in 8.0.2.

- Error: 10304 SQLSTATE: HY000 (ER_AUTH_USING_EXISTING_CERTS)

  Message: Skipping generation of SSL certificates as certificate files are present in data directory.

  ER_AUTH_USING_EXISTING_CERTS was added in 8.0.2.

- Error: 10305 SQLSTATE: HY000 (ER_AUTH_CERTS_SAVED_TO_DATADIR)

  Message: Auto generated SSL certificates are placed in data directory.

  ER_AUTH_CERTS_SAVED_TO_DATADIR was added in 8.0.2.

- Error: 10306 SQLSTATE: HY000 (ER_AUTH_CERT_GENERATION_DISABLED)

  Message: Skipping generation of SSL certificates as --auto_generate_certs is set to OFF.

  ER_AUTH_CERT_GENERATION_DISABLED was added in 8.0.2.

- Error: 10307 SQLSTATE: HY000 (ER_AUTH_RSA_CONF_PREVENTS_KEY_GENERATION)

  Message: Skipping generation of RSA key pair through %s as options related to RSA keys are specified.

  ER_AUTH_RSA_CONF_PREVENTS_KEY_GENERATION was added in 8.0.2.

- Error: 10308 SQLSTATE: HY000 (ER_AUTH_KEY_GENERATION_SKIPPED_PAIR_PRESENT)

Message: Skipping generation of RSA key pair through %s as key files are present in data directory.

ER_AUTH_KEY_GENERATION_SKIPPED_PAIR_PRESENT was added in 8.0.2.

- Error: 10309 SQLSTATE: HY000 (ER_AUTH_KEYS_SAVED_TO_DATADIR)

  Message: Auto generated RSA key files through %s are placed in data directory.

  ER_AUTH_KEYS_SAVED_TO_DATADIR was added in 8.0.2.

- Error: 10310 SQLSTATE: HY000 (ER_AUTH_KEY_GENERATION_DISABLED)

  Message: Skipping generation of RSA key pair as %s is set to OFF.

  ER_AUTH_KEY_GENERATION_DISABLED was added in 8.0.2.

- Error: 10311 SQLSTATE: HY000 (ER_AUTHCACHE_PROXIES_PRIV_SKIPPED_NEEDS_RESOLVE)

  Message: 'proxies_priv' entry '%s@%s %s@%s' ignored in --skip-name-resolve mode.

  ER_AUTHCACHE_PROXIES_PRIV_SKIPPED_NEEDS_RESOLVE was added in 8.0.2.

- Error: 10312 SQLSTATE: HY000 (ER_AUTHCACHE_PLUGIN_MISSING)

  Message: The plugin '%.*s' used to authenticate user '%s'@'%.*s' is not loaded. Nobody can currently login using this account.

  ER_AUTHCACHE_PLUGIN_MISSING was added in 8.0.2.

- Error: 10313 SQLSTATE: HY000 (ER_AUTHCACHE_PLUGIN_CONFIG)

  Message: The plugin '%s' is used to authenticate user '%s'@'%.*s', %s configured. Nobody can currently login using this account.

  ER_AUTHCACHE_PLUGIN_CONFIG was added in 8.0.2.

- Error: 10315 SQLSTATE: HY000 (ER_AUTHCACHE_USER_SKIPPED_NEEDS_RESOLVE)

  Message: 'user' entry '%s@%s' ignored in --skip-name-resolve mode.

  ER_AUTHCACHE_USER_SKIPPED_NEEDS_RESOLVE was added in 8.0.2.

- Error: 10316 SQLSTATE: HY000 (ER_AUTHCACHE_USER_TABLE_DODGY)

  Message: Fatal error: mysql.user table is damaged. Please run mysql_upgrade.

  ER_AUTHCACHE_USER_TABLE_DODGY was added in 8.0.2.

- Error: 10317 SQLSTATE: HY000 (ER_AUTHCACHE_USER_IGNORED_DEPRECATED_PASSWORD)

  Message: User entry '%s'@'%s' has a deprecated pre-4.1 password. The user will be ignored and no one can login with this user anymore.

  ER_AUTHCACHE_USER_IGNORED_DEPRECATED_PASSWORD was added in 8.0.2.

- Error: 10318 SQLSTATE: HY000 (ER_AUTHCACHE_USER_IGNORED_NEEDS_PLUGIN)

  Message: User entry '%s'@'%s' has an empty plugin value. The user will be ignored and no one can login with this user anymore.

  ER_AUTHCACHE_USER_IGNORED_NEEDS_PLUGIN was added in 8.0.2.

- Error: 10319 SQLSTATE: HY000 (ER_AUTHCACHE_USER_IGNORED_INVALID_PASSWORD)

Message: Found invalid password for user: '%s@%s'; Ignoring user

ER_AUTHCACHE_USER_IGNORED_INVALID_PASSWORD was added in 8.0.2.

- Error: 10320 SQLSTATE: HY000 (ER_AUTHCACHE_EXPIRED_PASSWORD_UNSUPPORTED)

  Message: 'user' entry '%s@%s' has the password ignore flag raised, but its authentication plugin doesn't support password expiration. The user id will be ignored.

  ER_AUTHCACHE_EXPIRED_PASSWORD_UNSUPPORTED was added in 8.0.2.

- Error: 10321 SQLSTATE: HY000 (ER_NO_SUPER_WITHOUT_USER_PLUGIN)

  Message: Some of the user accounts with SUPER privileges were disabled because of empty mysql.user.plugin value. If you are upgrading from MySQL 5.6 to MySQL 5.7 it means we were not able to substitute for empty plugin column. Probably because of pre 4.1 password hash. If your account is disabled you will need to: 1. Stop the server and restart it with --skip-grant-tables. 2. Run mysql_upgrade. 3. Restart the server with the parameters you normally use. For complete instructions on how to upgrade MySQL to a new version please see the 'Upgrading MySQL' section from the MySQL manual

  ER_NO_SUPER_WITHOUT_USER_PLUGIN was added in 8.0.2.

- Error: 10322 SQLSTATE: HY000 (ER_AUTHCACHE_DB_IGNORED_EMPTY_NAME)

  Message: Found an entry in the 'db' table with empty database name; Skipped

  ER_AUTHCACHE_DB_IGNORED_EMPTY_NAME was added in 8.0.2.

- Error: 10323 SQLSTATE: HY000 (ER_AUTHCACHE_DB_SKIPPED_NEEDS_RESOLVE)

  Message: 'db' entry '%s %s@%s' ignored in --skip-name-resolve mode.

  ER_AUTHCACHE_DB_SKIPPED_NEEDS_RESOLVE was added in 8.0.2.

- Error: 10324 SQLSTATE: HY000 (ER_AUTHCACHE_DB_ENTRY_LOWERCASED_REVOKE_WILL_FAIL)

  Message: 'db' entry '%s %s@%s' had database in mixed case that has been forced to lowercase because lower_case_table_names is set. It will not be possible to remove this privilege using REVOKE.

  ER_AUTHCACHE_DB_ENTRY_LOWERCASED_REVOKE_WILL_FAIL was added in 8.0.2.

- Error: 10325 SQLSTATE: HY000 (ER_AUTHCACHE_TABLE_PROXIES_PRIV_MISSING)

  Message: Missing system table mysql.proxies_priv; please run mysql_upgrade to create it

  ER_AUTHCACHE_TABLE_PROXIES_PRIV_MISSING was added in 8.0.2.

- Error: 10326 SQLSTATE: HY000 (ER_AUTHCACHE_CANT_OPEN_AND_LOCK_PRIVILEGE_TABLES)

  Message: Fatal error: Can't open and lock privilege tables: %s

  ER_AUTHCACHE_CANT_OPEN_AND_LOCK_PRIVILEGE_TABLES was added in 8.0.2.

- Error: 10327 SQLSTATE: HY000 (ER_AUTHCACHE_CANT_INIT_GRANT_SUBSYSTEM)

  Message: Fatal: can't initialize grant subsystem - '%s'

  ER_AUTHCACHE_CANT_INIT_GRANT_SUBSYSTEM was added in 8.0.2.

- Error: 10328 SQLSTATE: HY000 (ER_AUTHCACHE_PROCS_PRIV_SKIPPED_NEEDS_RESOLVE)

  Message: 'procs_priv' entry '%s %s@%s' ignored in --skip-name-resolve mode.

  ER_AUTHCACHE_PROCS_PRIV_SKIPPED_NEEDS_RESOLVE was added in 8.0.2.

- Error: 10329 SQLSTATE: HY000 (ER_AUTHCACHE_PROCS_PRIV_ENTRY_IGNORED_BAD_ROUTINE_TYPE)

  Message: 'procs_priv' entry '%s' ignored, bad routine type

  ER_AUTHCACHE_PROCS_PRIV_ENTRY_IGNORED_BAD_ROUTINE_TYPE was added in 8.0.2.

- Error: 10330 SQLSTATE: HY000 (ER_AUTHCACHE_TABLES_PRIV_SKIPPED_NEEDS_RESOLVE)

  Message: 'tables_priv' entry '%s %s@%s' ignored in --skip-name-resolve mode.

  ER_AUTHCACHE_TABLES_PRIV_SKIPPED_NEEDS_RESOLVE was added in 8.0.2.

- Error: 10331 SQLSTATE: HY000 (ER_USER_NOT_IN_EXTRA_USERS_BINLOG_POSSIBLY_INCOMPLETE)

  Message: Failed to add %s in extra_users. Binary log entry may miss some of the users.

  ER_USER_NOT_IN_EXTRA_USERS_BINLOG_POSSIBLY_INCOMPLETE was added in 8.0.2.

- Error: 10332 SQLSTATE: HY000 (ER_DD_SCHEMA_NOT_FOUND)

  Message: Unable to start server. The data dictionary schema '%s' does not exist.

  ER_DD_SCHEMA_NOT_FOUND was added in 8.0.2.

- Error: 10333 SQLSTATE: HY000 (ER_DD_TABLE_NOT_FOUND)

  Message: Unable to start server. The data dictionary table '%s' does not exist.

  ER_DD_TABLE_NOT_FOUND was added in 8.0.2.

- Error: 10334 SQLSTATE: HY000 (ER_DD_SE_INIT_FAILED)

  Message: Failed to initialize DD Storage Engine

  ER_DD_SE_INIT_FAILED was added in 8.0.2.

- Error: 10335 SQLSTATE: HY000 (ER_DD_ABORTING_PARTIAL_UPGRADE)

  Message: Found partially upgraded DD. Aborting upgrade and deleting all DD tables. Start the upgrade process again.

  ER_DD_ABORTING_PARTIAL_UPGRADE was added in 8.0.2.

- Error: 10336 SQLSTATE: HY000 (ER_DD_FRM_EXISTS_FOR_TABLE)

  Message: Found .frm file with same name as one of the Dictionary Tables.

  ER_DD_FRM_EXISTS_FOR_TABLE was added in 8.0.2.

- Error: 10337 SQLSTATE: HY000 (ER_DD_CREATED_FOR_UPGRADE)

  Message: Created Data Dictionary for upgrade

  ER_DD_CREATED_FOR_UPGRADE was added in 8.0.2.

- Error: 10338 SQLSTATE: HY000 (ER_ERRMSG_CANT_FIND_FILE)

Message: Can't find error-message file '%s'. Check error-message file location and 'lc-messages-dir' configuration directive.

`ER_ERRMSG_CANT_FIND_FILE` was added in 8.0.2.

- Error: `10339` SQLSTATE: `HY000` (`ER_ERRMSG_LOADING_55_STYLE`)

  Message: Using pre 5.5 semantics to load error messages from %s. If this is not intended, refer to the documentation for valid usage of --lc-messages-dir and --language parameters.

  `ER_ERRMSG_LOADING_55_STYLE` was added in 8.0.2.

- Error: `10340` SQLSTATE: `HY000` (`ER_ERRMSG_MISSING_IN_FILE`)

  Message: Error message file '%s' had only %d error messages, but it should contain at least %d error messages. Check that the above file is the right version for this program!

  `ER_ERRMSG_MISSING_IN_FILE` was added in 8.0.2.

- Error: `10341` SQLSTATE: `HY000` (`ER_ERRMSG_OOM`)

  Message: Not enough memory for messagefile '%s'

  `ER_ERRMSG_OOM` was added in 8.0.2.

- Error: `10342` SQLSTATE: `HY000` (`ER_ERRMSG_CANT_READ`)

  Message: Can't read from messagefile '%s'

  `ER_ERRMSG_CANT_READ` was added in 8.0.2.

- Error: `10343` SQLSTATE: `HY000` (`ER_TABLE_INCOMPATIBLE_DECIMAL_FIELD`)

  Message: Found incompatible DECIMAL field '%s' in %s; Please do "ALTER TABLE `%s` FORCE" to fix it!

  `ER_TABLE_INCOMPATIBLE_DECIMAL_FIELD` was added in 8.0.2.

- Error: `10344` SQLSTATE: `HY000` (`ER_TABLE_INCOMPATIBLE_YEAR_FIELD`)

  Message: Found incompatible YEAR(x) field '%s' in %s; Please do "ALTER TABLE `%s` FORCE" to fix it!

  `ER_TABLE_INCOMPATIBLE_YEAR_FIELD` was added in 8.0.2.

- Error: `10345` SQLSTATE: `HY000` (`ER_INVALID_CHARSET_AND_DEFAULT_IS_MB`)

  Message: '%s' had no or invalid character set, and default character set is multi-byte, so character column sizes may have changed

  `ER_INVALID_CHARSET_AND_DEFAULT_IS_MB` was added in 8.0.2.

- Error: `10346` SQLSTATE: `HY000` (`ER_TABLE_WRONG_KEY_DEFINITION`)

  Message: Found wrong key definition in %s; Please do "ALTER TABLE `%s` FORCE " to fix it!

  `ER_TABLE_WRONG_KEY_DEFINITION` was added in 8.0.2.

- Error: `10347` SQLSTATE: `HY000` (`ER_CANT_OPEN_FRM_FILE`)

  Message: Unable to open file %s

  `ER_CANT_OPEN_FRM_FILE` was added in 8.0.2.

- Error: 10348 SQLSTATE: HY000 (ER_CANT_READ_FRM_FILE)

  Message: Error in reading file %s

  ER_CANT_READ_FRM_FILE was added in 8.0.2.

- Error: 10349 SQLSTATE: HY000 (ER_TABLE_CREATED_WITH_DIFFERENT_VERSION)

  Message: Table '%s' was created with a different version of MySQL and cannot be read

  ER_TABLE_CREATED_WITH_DIFFERENT_VERSION was added in 8.0.2.

- Error: 10350 SQLSTATE: HY000 (ER_VIEW_UNPARSABLE)

  Message: Unable to read view %s

  ER_VIEW_UNPARSABLE was added in 8.0.2.

- Error: 10351 SQLSTATE: HY000 (ER_FILE_TYPE_UNKNOWN)

  Message: File %s has unknown type in its header.

  ER_FILE_TYPE_UNKNOWN was added in 8.0.2.

- Error: 10352 SQLSTATE: HY000 (ER_INVALID_INFO_IN_FRM)

  Message: Incorrect information in file %s

  ER_INVALID_INFO_IN_FRM was added in 8.0.2.

- Error: 10353 SQLSTATE: HY000 (ER_CANT_OPEN_AND_LOCK_PRIVILEGE_TABLES)

  Message: Can't open and lock privilege tables: %s

  ER_CANT_OPEN_AND_LOCK_PRIVILEGE_TABLES was added in 8.0.2.

- Error: 10354 SQLSTATE: HY000 (ER_AUDIT_PLUGIN_DOES_NOT_SUPPORT_AUDIT_AUTH_EVENTS)

  Message: Plugin '%s' cannot subscribe to MYSQL_AUDIT_AUTHORIZATION events. Currently not supported.

  ER_AUDIT_PLUGIN_DOES_NOT_SUPPORT_AUDIT_AUTH_EVENTS was added in 8.0.2.

- Error: 10355 SQLSTATE: HY000 (ER_AUDIT_PLUGIN_HAS_INVALID_DATA)

  Message: Plugin '%s' has invalid data.

  ER_AUDIT_PLUGIN_HAS_INVALID_DATA was added in 8.0.2.

- Error: 10356 SQLSTATE: HY000 (ER_TZ_OOM_INITIALIZING_TIME_ZONES)

  Message: Fatal error: OOM while initializing time zones

  ER_TZ_OOM_INITIALIZING_TIME_ZONES was added in 8.0.2.

- Error: 10357 SQLSTATE: HY000 (ER_TZ_CANT_OPEN_AND_LOCK_TIME_ZONE_TABLE)

  Message: Can't open and lock time zone table: %s trying to live without them

  ER_TZ_CANT_OPEN_AND_LOCK_TIME_ZONE_TABLE was added in 8.0.2.

- Error: 10358 SQLSTATE: HY000 (ER_TZ_OOM_LOADING_LEAP_SECOND_TABLE)

Message: Fatal error: Out of memory while loading mysql.time_zone_leap_second table

`ER_TZ_OOM_LOADING_LEAP_SECOND_TABLE` was added in 8.0.2.

- Error: `10359` SQLSTATE: `HY000` (`ER_TZ_TOO_MANY_LEAPS_IN_LEAP_SECOND_TABLE`)

  Message: Fatal error: While loading mysql.time_zone_leap_second table: too much leaps

  `ER_TZ_TOO_MANY_LEAPS_IN_LEAP_SECOND_TABLE` was added in 8.0.2.

- Error: `10360` SQLSTATE: `HY000` (`ER_TZ_ERROR_LOADING_LEAP_SECOND_TABLE`)

  Message: Fatal error: Error while loading mysql.time_zone_leap_second table

  `ER_TZ_ERROR_LOADING_LEAP_SECOND_TABLE` was added in 8.0.2.

- Error: `10361` SQLSTATE: `HY000` (`ER_TZ_UNKNOWN_OR_ILLEGAL_DEFAULT_TIME_ZONE`)

  Message: Fatal error: Illegal or unknown default time zone '%s'

  `ER_TZ_UNKNOWN_OR_ILLEGAL_DEFAULT_TIME_ZONE` was added in 8.0.2.

- Error: `10362` SQLSTATE: `HY000` (`ER_TZ_CANT_FIND_DESCRIPTION_FOR_TIME_ZONE`)

  Message: Can't find description of time zone '%.*s'

  `ER_TZ_CANT_FIND_DESCRIPTION_FOR_TIME_ZONE` was added in 8.0.2.

- Error: `10363` SQLSTATE: `HY000` (`ER_TZ_CANT_FIND_DESCRIPTION_FOR_TIME_ZONE_ID`)

  Message: Can't find description of time zone '%u'

  `ER_TZ_CANT_FIND_DESCRIPTION_FOR_TIME_ZONE_ID` was added in 8.0.2.

- Error: `10364` SQLSTATE: `HY000` (`ER_TZ_TRANSITION_TYPE_TABLE_TYPE_TOO_LARGE`)

  Message: Error while loading time zone description from mysql.time_zone_transition_type table: too big transition type id

  `ER_TZ_TRANSITION_TYPE_TABLE_TYPE_TOO_LARGE` was added in 8.0.2.

- Error: `10365` SQLSTATE: `HY000` (`ER_TZ_TRANSITION_TYPE_TABLE_ABBREVIATIONS_EXCEED_SPACE`)

  Message: Error while loading time zone description from mysql.time_zone_transition_type table: not enough room for abbreviations

  `ER_TZ_TRANSITION_TYPE_TABLE_ABBREVIATIONS_EXCEED_SPACE` was added in 8.0.2.

- Error: `10366` SQLSTATE: `HY000` (`ER_TZ_TRANSITION_TYPE_TABLE_LOAD_ERROR`)

  Message: Error while loading time zone description from mysql.time_zone_transition_type table

  `ER_TZ_TRANSITION_TYPE_TABLE_LOAD_ERROR` was added in 8.0.2.

- Error: `10367` SQLSTATE: `HY000` (`ER_TZ_TRANSITION_TABLE_TOO_MANY_TRANSITIONS`)

  Message: Error while loading time zone description from mysql.time_zone_transition table: too much transitions

  `ER_TZ_TRANSITION_TABLE_TOO_MANY_TRANSITIONS` was added in 8.0.2.

- Error: `10368` SQLSTATE: `HY000` (`ER_TZ_TRANSITION_TABLE_BAD_TRANSITION_TYPE`)

Message: Error while loading time zone description from mysql.time_zone_transition table: bad transition type id

ER_TZ_TRANSITION_TABLE_BAD_TRANSITION_TYPE was added in 8.0.2.

- Error: 10369 SQLSTATE: HY000 (ER_TZ_TRANSITION_TABLE_LOAD_ERROR)

  Message: Error while loading time zone description from mysql.time_zone_transition table

  ER_TZ_TRANSITION_TABLE_LOAD_ERROR was added in 8.0.2.

- Error: 10370 SQLSTATE: HY000 (ER_TZ_NO_TRANSITION_TYPES_IN_TIME_ZONE)

  Message: loading time zone without transition types

  ER_TZ_NO_TRANSITION_TYPES_IN_TIME_ZONE was added in 8.0.2.

- Error: 10371 SQLSTATE: HY000 (ER_TZ_OOM_LOADING_TIME_ZONE_DESCRIPTION)

  Message: Out of memory while loading time zone description

  ER_TZ_OOM_LOADING_TIME_ZONE_DESCRIPTION was added in 8.0.2.

- Error: 10372 SQLSTATE: HY000 (ER_TZ_CANT_BUILD_MKTIME_MAP)

  Message: Unable to build mktime map for time zone

  ER_TZ_CANT_BUILD_MKTIME_MAP was added in 8.0.2.

- Error: 10373 SQLSTATE: HY000 (ER_TZ_OOM_WHILE_LOADING_TIME_ZONE)

  Message: Out of memory while loading time zone

  ER_TZ_OOM_WHILE_LOADING_TIME_ZONE was added in 8.0.2.

- Error: 10374 SQLSTATE: HY000 (ER_TZ_OOM_WHILE_SETTING_TIME_ZONE)

  Message: Fatal error: Out of memory while setting new time zone

  ER_TZ_OOM_WHILE_SETTING_TIME_ZONE was added in 8.0.2.

- Error: 10375 SQLSTATE: HY000 (ER_SLAVE_SQL_THREAD_STOPPED_UNTIL_CONDITION_BAD)

  Message: Slave SQL thread is stopped because UNTIL condition is bad(%s:%llu).

  ER_SLAVE_SQL_THREAD_STOPPED_UNTIL_CONDITION_BAD was added in 8.0.2.

- Error: 10376 SQLSTATE: HY000 (ER_SLAVE_SQL_THREAD_STOPPED_UNTIL_POSITION_REACHED)

  Message: Slave SQL thread stopped because it reached its UNTIL position %llu

  ER_SLAVE_SQL_THREAD_STOPPED_UNTIL_POSITION_REACHED was added in 8.0.2.

- Error: 10377 SQLSTATE: HY000 (ER_SLAVE_SQL_THREAD_STOPPED_BEFORE_GTIDS_ALREADY_APPLIED)

  Message: Slave SQL thread stopped because UNTIL SQL_BEFORE_GTIDS %s is already applied

  ER_SLAVE_SQL_THREAD_STOPPED_BEFORE_GTIDS_ALREADY_APPLIED was added in 8.0.2.

- Error: 10378 SQLSTATE: HY000 (ER_SLAVE_SQL_THREAD_STOPPED_BEFORE_GTIDS_REACHED)

Message: Slave SQL thread stopped because it reached UNTIL SQL_BEFORE_GTIDS %s

ER_SLAVE_SQL_THREAD_STOPPED_BEFORE_GTIDS_REACHED was added in 8.0.2.

- Error: 10379 SQLSTATE: HY000 (ER_SLAVE_SQL_THREAD_STOPPED_AFTER_GTIDS_REACHED)

  Message: Slave SQL thread stopped because it reached UNTIL SQL_AFTER_GTIDS %s

  ER_SLAVE_SQL_THREAD_STOPPED_AFTER_GTIDS_REACHED was added in 8.0.2.

- Error: 10380 SQLSTATE: HY000 (ER_SLAVE_SQL_THREAD_STOPPED_GAP_TRX_PROCESSED)

  Message: Slave SQL thread stopped according to UNTIL SQL_AFTER_MTS_GAPS as it has processed all gap transactions left from the previous slave session.

  ER_SLAVE_SQL_THREAD_STOPPED_GAP_TRX_PROCESSED was added in 8.0.2.

- Error: 10381 SQLSTATE: HY000 (ER_GROUP_REPLICATION_PLUGIN_NOT_INSTALLED)

  Message: Group Replication plugin is not installed.

  ER_GROUP_REPLICATION_PLUGIN_NOT_INSTALLED was added in 8.0.2.

- Error: 10382 SQLSTATE: HY000 (ER_GTID_ALREADY_ADDED_BY_USER)

  Message: The transaction owned GTID is already in the %s table, which is caused by an explicit modifying from user client.

  ER_GTID_ALREADY_ADDED_BY_USER was added in 8.0.2.

- Error: 10383 SQLSTATE: HY000 (ER_FAILED_TO_DELETE_FROM_GTID_EXECUTED_TABLE)

  Message: Failed to delete the row: '%s' from the gtid_executed table.

  ER_FAILED_TO_DELETE_FROM_GTID_EXECUTED_TABLE was added in 8.0.2.

- Error: 10384 SQLSTATE: HY000 (ER_FAILED_TO_COMPRESS_GTID_EXECUTED_TABLE)

  Message: Failed to compress the gtid_executed table.

  ER_FAILED_TO_COMPRESS_GTID_EXECUTED_TABLE was added in 8.0.2.

- Error: 10385 SQLSTATE: HY000 (ER_FAILED_TO_COMPRESS_GTID_EXECUTED_TABLE_OOM)

  Message: Failed to compress the gtid_executed table, because it is failed to allocate the THD.

  ER_FAILED_TO_COMPRESS_GTID_EXECUTED_TABLE_OOM was added in 8.0.2.

- Error: 10386 SQLSTATE: HY000 (ER_FAILED_TO_INIT_THREAD_ATTR_FOR_GTID_TABLE_COMPRESSION)

  Message: Failed to initialize thread attribute when creating compression thread.

  ER_FAILED_TO_INIT_THREAD_ATTR_FOR_GTID_TABLE_COMPRESSION was added in 8.0.2.

- Error: 10387 SQLSTATE: HY000 (ER_FAILED_TO_CREATE_GTID_TABLE_COMPRESSION_THREAD)

  Message: Can not create thread to compress gtid_executed table (errno= %d)

  ER_FAILED_TO_CREATE_GTID_TABLE_COMPRESSION_THREAD was added in 8.0.2.

- Error: 10388 SQLSTATE: HY000 (ER_FAILED_TO_JOIN_GTID_TABLE_COMPRESSION_THREAD)

Message: Could not join gtid_executed table compression thread. error:%d

ER_FAILED_TO_JOIN_GTID_TABLE_COMPRESSION_THREAD was added in 8.0.2.

- Error: 10389 SQLSTATE: HY000 (ER_NPIPE_FAILED_TO_INIT_SECURITY_DESCRIPTOR)

  Message: Can't start server : Initialize security descriptor: %s

  ER_NPIPE_FAILED_TO_INIT_SECURITY_DESCRIPTOR was added in 8.0.2.

- Error: 10390 SQLSTATE: HY000 (ER_NPIPE_FAILED_TO_SET_SECURITY_DESCRIPTOR)

  Message: Can't start server : Set security descriptor: %s

  ER_NPIPE_FAILED_TO_SET_SECURITY_DESCRIPTOR was added in 8.0.2.

- Error: 10391 SQLSTATE: HY000 (ER_NPIPE_PIPE_ALREADY_IN_USE)

  Message: Can't start server : Named Pipe "%s" already in use.

  ER_NPIPE_PIPE_ALREADY_IN_USE was added in 8.0.2.

- Error: 10392 SQLSTATE: HY000 (ER_NDB_SLAVE_SAW_EPOCH_LOWER_THAN_PREVIOUS_ON_START)

  Message: NDB Slave : At SQL thread start applying epoch %llu/%llu (%llu) from Master ServerId %u which is lower than previously applied epoch %llu/%llu (%llu). Group Master Log : %s Group Master Log Pos : %llu. Check slave positioning.

  ER_NDB_SLAVE_SAW_EPOCH_LOWER_THAN_PREVIOUS_ON_START was added in 8.0.2.

- Error: 10393 SQLSTATE: HY000 (ER_NDB_SLAVE_SAW_EPOCH_LOWER_THAN_PREVIOUS)

  Message: NDB Slave : SQL thread stopped as applying epoch %llu/%llu (%llu) from Master ServerId %u which is lower than previously applied epoch %llu/%llu (%llu). Group Master Log : %s Group Master Log Pos : %llu

  ER_NDB_SLAVE_SAW_EPOCH_LOWER_THAN_PREVIOUS was added in 8.0.2.

- Error: 10394 SQLSTATE: HY000 (ER_NDB_SLAVE_SAW_ALREADY_COMMITTED_EPOCH)

  Message: NDB Slave : SQL thread stopped as attempted to reapply already committed epoch %llu/%llu (%llu) from server id %u. Group Master Log : %s Group Master Log Pos : %llu.

  ER_NDB_SLAVE_SAW_ALREADY_COMMITTED_EPOCH was added in 8.0.2.

- Error: 10395 SQLSTATE: HY000 (ER_NDB_SLAVE_PREVIOUS_EPOCH_NOT_COMMITTED)

  Message: NDB Slave : SQL thread stopped as attempting to apply new epoch %llu/%llu (%llu) while lower received epoch %llu/%llu (%llu) has not been committed. Master server id : %u. Group Master Log : %s Group Master Log Pos : %llu.

  ER_NDB_SLAVE_PREVIOUS_EPOCH_NOT_COMMITTED was added in 8.0.2.

- Error: 10396 SQLSTATE: HY000 (ER_NDB_SLAVE_MISSING_DATA_FOR_TIMESTAMP_COLUMN)

  Message: NDB Slave: missing data for %s timestamp column %u.

  ER_NDB_SLAVE_MISSING_DATA_FOR_TIMESTAMP_COLUMN was added in 8.0.2.

- Error: 10397 SQLSTATE: HY000 (ER_NDB_SLAVE_LOGGING_EXCEPTIONS_TO)

  Message: NDB Slave: Table %s.%s logging exceptions to %s.%s

ER_NDB_SLAVE_LOGGING_EXCEPTIONS_TO was added in 8.0.2.

- Error: 10398 SQLSTATE: HY000 (ER_NDB_SLAVE_LOW_EPOCH_RESOLUTION)

  Message: NDB Slave: Table %s.%s : %s, low epoch resolution

  ER_NDB_SLAVE_LOW_EPOCH_RESOLUTION was added in 8.0.2.

- Error: 10399 SQLSTATE: HY000 (ER_NDB_INFO_FOUND_UNEXPECTED_FIELD_TYPE)

  Message: Found unexpected field type %u

  ER_NDB_INFO_FOUND_UNEXPECTED_FIELD_TYPE was added in 8.0.2.

- Error: 10400 SQLSTATE: HY000 (ER_NDB_INFO_FAILED_TO_CREATE_NDBINFO)

  Message: Failed to create NdbInfo

  ER_NDB_INFO_FAILED_TO_CREATE_NDBINFO was added in 8.0.2.

- Error: 10401 SQLSTATE: HY000 (ER_NDB_INFO_FAILED_TO_INIT_NDBINFO)

  Message: Failed to init NdbInfo

  ER_NDB_INFO_FAILED_TO_INIT_NDBINFO was added in 8.0.2.

- Error: 10402 SQLSTATE: HY000 (ER_NDB_CLUSTER_WRONG_NUMBER_OF_FUNCTION_ARGUMENTS)

  Message: ndb_serialize_cond: Unexpected mismatch of found and expected number of function arguments %u

  ER_NDB_CLUSTER_WRONG_NUMBER_OF_FUNCTION_ARGUMENTS was added in 8.0.2.

- Error: 10403 SQLSTATE: HY000 (ER_NDB_CLUSTER_SCHEMA_INFO)

  Message: %s - %s.%s

  ER_NDB_CLUSTER_SCHEMA_INFO was added in 8.0.2.

- Error: 10404 SQLSTATE: HY000 (ER_NDB_CLUSTER_GENERIC_MESSAGE)

  Message: %s

  ER_NDB_CLUSTER_GENERIC_MESSAGE was added in 8.0.2.

- Error: 10405 SQLSTATE: HY000 (ER_RPL_CANT_OPEN_INFO_TABLE)

  Message: Info table is not ready to be used. Table '%s.%s' cannot be opened.

  ER_RPL_CANT_OPEN_INFO_TABLE was added in 8.0.2.

- Error: 10406 SQLSTATE: HY000 (ER_RPL_CANT_SCAN_INFO_TABLE)

  Message: Info table is not ready to be used. Table '%s.%s' cannot be scanned.

  ER_RPL_CANT_SCAN_INFO_TABLE was added in 8.0.2.

- Error: 10407 SQLSTATE: HY000 (ER_RPL_CORRUPTED_INFO_TABLE)

  Message: Corrupted table %s.%s. Check out table definition.

  ER_RPL_CORRUPTED_INFO_TABLE was added in 8.0.2.

- Error: 10408 SQLSTATE: HY000 (ER_RPL_CORRUPTED_KEYS_IN_INFO_TABLE)

  Message: Info table has a problem with its key field(s). Table '%s.%s' expected field #%u to be '%s' but found '%s' instead.

  ER_RPL_CORRUPTED_KEYS_IN_INFO_TABLE was added in 8.0.2.

- Error: 10409 SQLSTATE: HY000 (ER_RPL_WORKER_ID_IS)

  Message: Choosing worker id %lu, the following is going to be %lu

  ER_RPL_WORKER_ID_IS was added in 8.0.2.

- Error: 10410 SQLSTATE: HY000 (ER_RPL_INCONSISTENT_TIMESTAMPS_IN_TRX)

  Message: Transaction is tagged with inconsistent logical timestamps: sequence_number (%lld) <= last_committed (%lld)

  ER_RPL_INCONSISTENT_TIMESTAMPS_IN_TRX was added in 8.0.2.

- Error: 10411 SQLSTATE: HY000 (ER_RPL_INCONSISTENT_SEQUENCE_NO_IN_TRX)

  Message: Transaction's sequence number is inconsistent with that of a preceding one: sequence_number (%lld) <= previous sequence_number (%lld)

  ER_RPL_INCONSISTENT_SEQUENCE_NO_IN_TRX was added in 8.0.2.

- Error: 10412 SQLSTATE: HY000 (ER_RPL_CHANNELS_REQUIRE_TABLES_AS_INFO_REPOSITORIES)

  Message: For the creation of replication channels the master info and relay log info repositories must be set to TABLE

  ER_RPL_CHANNELS_REQUIRE_TABLES_AS_INFO_REPOSITORIES was added in 8.0.2.

- Error: 10413 SQLSTATE: HY000 (ER_RPL_CHANNELS_REQUIRE_NON_ZERO_SERVER_ID)

  Message: For the creation of replication channels the server id must be different from 0

  ER_RPL_CHANNELS_REQUIRE_NON_ZERO_SERVER_ID was added in 8.0.2.

- Error: 10414 SQLSTATE: HY000 (ER_RPL_REPO_SHOULD_BE_TABLE)

  Message: Slave: Wrong repository. Repository should be TABLE

  ER_RPL_REPO_SHOULD_BE_TABLE was added in 8.0.2.

- Error: 10415 SQLSTATE: HY000 (ER_RPL_ERROR_CREATING_MASTER_INFO)

  Message: Error creating master info: %s.

  ER_RPL_ERROR_CREATING_MASTER_INFO was added in 8.0.2.

- Error: 10416 SQLSTATE: HY000 (ER_RPL_ERROR_CHANGING_MASTER_INFO_REPO_TYPE)

  Message: Error changing the type of master info's repository: %s.

  ER_RPL_ERROR_CHANGING_MASTER_INFO_REPO_TYPE was added in 8.0.2.

- Error: 10417 SQLSTATE: HY000 (ER_RPL_CHANGING_RELAY_LOG_INFO_REPO_TYPE_FAILED_DUE_TO_GAPS)

  Message: It is not possible to change the type of the relay log repository because there are workers repositories with possible execution gaps. The value of --relay_log_info_repository is altered to one

of the found Worker repositories. The gaps have to be sorted out before resuming with the type change.

ER_RPL_CHANGING_RELAY_LOG_INFO_REPO_TYPE_FAILED_DUE_TO_GAPS was added in 8.0.2.

- Error: 10418 SQLSTATE: HY000 (ER_RPL_ERROR_CREATING_RELAY_LOG_INFO)

  Message: Error creating relay log info: %s.

  ER_RPL_ERROR_CREATING_RELAY_LOG_INFO was added in 8.0.2.

- Error: 10419 SQLSTATE: HY000 (ER_RPL_ERROR_CHANGING_RELAY_LOG_INFO_REPO_TYPE)

  Message: Error changing the type of relay log info's repository: %s.

  ER_RPL_ERROR_CHANGING_RELAY_LOG_INFO_REPO_TYPE was added in 8.0.2.

- Error: 10420 SQLSTATE: HY000 (ER_RPL_FAILED_TO_DELETE_FROM_SLAVE_WORKERS_INFO_REPOSITORY)

  Message: Could not delete from Slave Workers info repository.

  ER_RPL_FAILED_TO_DELETE_FROM_SLAVE_WORKERS_INFO_REPOSITORY was added in 8.0.2.

- Error: 10421 SQLSTATE: HY000 (ER_RPL_FAILED_TO_RESET_STATE_IN_SLAVE_INFO_REPOSITORY)

  Message: Could not store the reset Slave Worker state into the slave info repository.

  ER_RPL_FAILED_TO_RESET_STATE_IN_SLAVE_INFO_REPOSITORY was added in 8.0.2.

- Error: 10422 SQLSTATE: HY000 (ER_RPL_ERROR_CHECKING_REPOSITORY)

  Message: Error in checking %s repository info type of %s.

  ER_RPL_ERROR_CHECKING_REPOSITORY was added in 8.0.2.

- Error: 10423 SQLSTATE: HY000 (ER_RPL_SLAVE_GENERIC_MESSAGE)

  Message: Slave: %s

  ER_RPL_SLAVE_GENERIC_MESSAGE was added in 8.0.2.

- Error: 10424 SQLSTATE: HY000 (ER_RPL_SLAVE_COULD_NOT_CREATE_CHANNEL_LIST)

  Message: Slave: Could not create channel list

  ER_RPL_SLAVE_COULD_NOT_CREATE_CHANNEL_LIST was added in 8.0.2.

- Error: 10425 SQLSTATE: HY000 (ER_RPL_MULTISOURCE_REQUIRES_TABLE_TYPE_REPOSITORIES)

  Message: Slave: This slave was a multisourced slave previously which is supported only by both TABLE based master info and relay log info repositories. Found one or both of the info repos to be type FILE. Set both repos to type TABLE.

  ER_RPL_MULTISOURCE_REQUIRES_TABLE_TYPE_REPOSITORIES was added in 8.0.2.

- Error: 10426 SQLSTATE: HY000 (ER_RPL_SLAVE_FAILED_TO_INIT_A_MASTER_INFO_STRUCTURE)

  Message: Slave: Failed to initialize the master info structure for channel '%s'; its record may still be present in 'mysql.slave_master_info' table, consider deleting it.

ER_RPL_SLAVE_FAILED_TO_INIT_A_MASTER_INFO_STRUCTURE was added in 8.0.2.

- Error: 10427 SQLSTATE: HY000 (ER_RPL_SLAVE_FAILED_TO_INIT_MASTER_INFO_STRUCTURE)

  Message: Failed to initialize the master info structure%s

  ER_RPL_SLAVE_FAILED_TO_INIT_MASTER_INFO_STRUCTURE was added in 8.0.2.

- Error: 10428 SQLSTATE: HY000 (ER_RPL_SLAVE_FAILED_TO_CREATE_CHANNEL_FROM_MASTER_INFO)

  Message: Slave: Failed to create a channel from master info table repository.

  ER_RPL_SLAVE_FAILED_TO_CREATE_CHANNEL_FROM_MASTER_INFO was added in 8.0.2.

- Error: 10429 SQLSTATE: HY000 (ER_RPL_FAILED_TO_CREATE_NEW_INFO_FILE)

  Message: Failed to create a new info file (file '%s', errno %d)

  ER_RPL_FAILED_TO_CREATE_NEW_INFO_FILE was added in 8.0.2.

- Error: 10430 SQLSTATE: HY000 (ER_RPL_FAILED_TO_CREATE_CACHE_FOR_INFO_FILE)

  Message: Failed to create a cache on info file (file '%s')

  ER_RPL_FAILED_TO_CREATE_CACHE_FOR_INFO_FILE was added in 8.0.2.

- Error: 10431 SQLSTATE: HY000 (ER_RPL_FAILED_TO_OPEN_INFO_FILE)

  Message: Failed to open the existing info file (file '%s', errno %d)

  ER_RPL_FAILED_TO_OPEN_INFO_FILE was added in 8.0.2.

- Error: 10432 SQLSTATE: HY000 (ER_RPL_GTID_MEMORY_FINALLY_AVAILABLE)

  Message: Server overcomes the temporary 'out of memory' in '%d' tries while allocating a new chunk of intervals for storing GTIDs.

  ER_RPL_GTID_MEMORY_FINALLY_AVAILABLE was added in 8.0.2.

- Error: 10433 SQLSTATE: HY000 (ER_SERVER_COST_UNKNOWN_COST_CONSTANT)

  Message: Unknown cost constant "%s" in mysql.server_cost table

  ER_SERVER_COST_UNKNOWN_COST_CONSTANT was added in 8.0.2.

- Error: 10434 SQLSTATE: HY000 (ER_SERVER_COST_INVALID_COST_CONSTANT)

  Message: Invalid value for cost constant "%s" in mysql.server_cost table: %.1f

  ER_SERVER_COST_INVALID_COST_CONSTANT was added in 8.0.2.

- Error: 10435 SQLSTATE: HY000 (ER_ENGINE_COST_UNKNOWN_COST_CONSTANT)

  Message: Unknown cost constant "%s" in mysql.engine_cost table

  ER_ENGINE_COST_UNKNOWN_COST_CONSTANT was added in 8.0.2.

- Error: 10436 SQLSTATE: HY000 (ER_ENGINE_COST_UNKNOWN_STORAGE_ENGINE)

  Message: Unknown storage engine "%s" in mysql.engine_cost table

ER_ENGINE_COST_UNKNOWN_STORAGE_ENGINE was added in 8.0.2.

- Error: 10437 SQLSTATE: HY000 (ER_ENGINE_COST_INVALID_DEVICE_TYPE_FOR_SE)

  Message: Invalid device type %d for "%s" storage engine for cost constant "%s" in mysql.engine_cost table

  ER_ENGINE_COST_INVALID_DEVICE_TYPE_FOR_SE was added in 8.0.2.

- Error: 10438 SQLSTATE: HY000 (ER_ENGINE_COST_INVALID_CONST_CONSTANT_FOR_SE_AND_DEVICE)

  Message: Invalid value for cost constant "%s" for "%s" storage engine and device type %d in mysql.engine_cost table: %.1f

  ER_ENGINE_COST_INVALID_CONST_CONSTANT_FOR_SE_AND_DEVICE was added in 8.0.2.

- Error: 10439 SQLSTATE: HY000 (ER_SERVER_COST_FAILED_TO_READ)

  Message: init_read_record returned error when reading from mysql.server_cost table.

  ER_SERVER_COST_FAILED_TO_READ was added in 8.0.2.

- Error: 10440 SQLSTATE: HY000 (ER_ENGINE_COST_FAILED_TO_READ)

  Message: init_read_record returned error when reading from mysql.engine_cost table.

  ER_ENGINE_COST_FAILED_TO_READ was added in 8.0.2.

- Error: 10441 SQLSTATE: HY000 (ER_FAILED_TO_OPEN_COST_CONSTANT_TABLES)

  Message: Failed to open optimizer cost constant tables

  ER_FAILED_TO_OPEN_COST_CONSTANT_TABLES was added in 8.0.2.

- Error: 10442 SQLSTATE: HY000 (ER_RPL_UNSUPPORTED_UNIGNORABLE_EVENT_IN_STREAM)

  Message: Unsupported non-ignorable event fed into the event stream.

  ER_RPL_UNSUPPORTED_UNIGNORABLE_EVENT_IN_STREAM was added in 8.0.2.

- Error: 10443 SQLSTATE: HY000 (ER_RPL_GTID_LOG_EVENT_IN_STREAM)

  Message: GTID_LOG_EVENT or ANONYMOUS_GTID_LOG_EVENT is not expected in an event stream %s.

  ER_RPL_GTID_LOG_EVENT_IN_STREAM was added in 8.0.2.

- Error: 10444 SQLSTATE: HY000 (ER_RPL_UNEXPECTED_BEGIN_IN_STREAM)

  Message: QUERY(BEGIN) is not expected in an event stream in the middle of a %s.

  ER_RPL_UNEXPECTED_BEGIN_IN_STREAM was added in 8.0.2.

- Error: 10445 SQLSTATE: HY000 (ER_RPL_UNEXPECTED_COMMIT_ROLLBACK_OR_XID_LOG_EVENT_IN_STREAM)

  Message: QUERY(COMMIT or ROLLBACK) or XID_LOG_EVENT is not expected in an event stream %s.

  ER_RPL_UNEXPECTED_COMMIT_ROLLBACK_OR_XID_LOG_EVENT_IN_STREAM was added in 8.0.2.

- Error: 10446 SQLSTATE: HY000 (ER_RPL_UNEXPECTED_XA_ROLLBACK_IN_STREAM)

  Message: QUERY(XA ROLLBACK) is not expected in an event stream %s.

  ER_RPL_UNEXPECTED_XA_ROLLBACK_IN_STREAM was added in 8.0.2.

- Error: 10447 SQLSTATE: HY000 (ER_EVENT_EXECUTION_FAILED_CANT_AUTHENTICATE_USER)

  Message: Event Scheduler: [%s].[%s.%s] execution failed, failed to authenticate the user.

  ER_EVENT_EXECUTION_FAILED_CANT_AUTHENTICATE_USER was added in 8.0.2.

- Error: 10448 SQLSTATE: HY000 (ER_EVENT_EXECUTION_FAILED_USER_LOST_EVEN_PRIVILEGE)

  Message: Event Scheduler: [%s].[%s.%s] execution failed, user no longer has EVENT privilege.

  ER_EVENT_EXECUTION_FAILED_USER_LOST_EVEN_PRIVILEGE was added in 8.0.2.

- Error: 10449 SQLSTATE: HY000 (ER_EVENT_ERROR_DURING_COMPILATION)

  Message: Event Scheduler: %serror during compilation of %s.%s

  ER_EVENT_ERROR_DURING_COMPILATION was added in 8.0.2.

- Error: 10450 SQLSTATE: HY000 (ER_EVENT_DROPPING)

  Message: Event Scheduler: Dropping %s.%s

  ER_EVENT_DROPPING was added in 8.0.2.

- Error: 10451 SQLSTATE: HY000 (ER_NDB_SCHEMA_GENERIC_MESSAGE)

  Message: Ndb schema[%s.%s]: %s

  ER_NDB_SCHEMA_GENERIC_MESSAGE was added in 8.0.2.

- Error: 10452 SQLSTATE: HY000 (ER_RPL_INCOMPATIBLE_DECIMAL_IN_RBR)

  Message: In RBR mode, Slave received incompatible DECIMAL field (old-style decimal field) from Master while creating conversion table. Please consider changing datatype on Master to new style decimal by executing ALTER command for column Name: %s.%s.%s.

  ER_RPL_INCOMPATIBLE_DECIMAL_IN_RBR was added in 8.0.2.

- Error: 10453 SQLSTATE: HY000 (ER_INIT_ROOT_WITHOUT_PASSWORD)

  Message: root@localhost is created with an empty password ! Please consider switching off the --initialize-insecure option.

  ER_INIT_ROOT_WITHOUT_PASSWORD was added in 8.0.2.

- Error: 10454 SQLSTATE: HY000 (ER_INIT_GENERATING_TEMP_PASSWORD_FOR_ROOT)

  Message: A temporary password is generated for root@localhost: %s

  ER_INIT_GENERATING_TEMP_PASSWORD_FOR_ROOT was added in 8.0.2.

- Error: 10455 SQLSTATE: HY000 (ER_INIT_CANT_OPEN_BOOTSTRAP_FILE)

  Message: Failed to open the bootstrap file %s

  ER_INIT_CANT_OPEN_BOOTSTRAP_FILE was added in 8.0.2.

- Error: 10456 SQLSTATE: HY000 (ER_INIT_BOOTSTRAP_COMPLETE)

  Message: Bootstrapping complete

  ER_INIT_BOOTSTRAP_COMPLETE was added in 8.0.2.

- Error: 10457 SQLSTATE: HY000 (ER_INIT_DATADIR_NOT_EMPTY_WONT_INITIALIZE)

  Message: --initialize specified but the data directory has files in it. Aborting.

  ER_INIT_DATADIR_NOT_EMPTY_WONT_INITIALIZE was added in 8.0.2.

- Error: 10458 SQLSTATE: HY000 (ER_INIT_DATADIR_EXISTS_WONT_INITIALIZE)

  Message: --initialize specified on an existing data directory.

  ER_INIT_DATADIR_EXISTS_WONT_INITIALIZE was added in 8.0.2.

- Error: 10459 SQLSTATE: HY000 (ER_INIT_DATADIR_EXISTS_AND_PATH_TOO_LONG_WONT_INITIALIZE)

  Message: --initialize specified but the data directory exists and the path is too long. Aborting.

  ER_INIT_DATADIR_EXISTS_AND_PATH_TOO_LONG_WONT_INITIALIZE was added in 8.0.2.

- Error: 10460 SQLSTATE: HY000 (ER_INIT_DATADIR_EXISTS_AND_NOT_WRITABLE_WONT_INITIALIZE)

  Message: --initialize specified but the data directory exists and is not writable. Aborting.

  ER_INIT_DATADIR_EXISTS_AND_NOT_WRITABLE_WONT_INITIALIZE was added in 8.0.2.

- Error: 10461 SQLSTATE: HY000 (ER_INIT_CREATING_DD)

  Message: Creating the data directory %s

  ER_INIT_CREATING_DD was added in 8.0.2.

- Error: 10462 SQLSTATE: HY000 (ER_RPL_BINLOG_STARTING_DUMP)

  Message: Start binlog_dump to master_thread_id(%u) slave_server(%u), pos(%s, %llu)

  ER_RPL_BINLOG_STARTING_DUMP was added in 8.0.2.

- Error: 10463 SQLSTATE: HY000 (ER_RPL_BINLOG_MASTER_SENDS_HEARTBEAT)

  Message: master sends heartbeat message

  ER_RPL_BINLOG_MASTER_SENDS_HEARTBEAT was added in 8.0.2.

- Error: 10464 SQLSTATE: HY000 (ER_RPL_BINLOG_SKIPPING_REMAINING_HEARTBEAT_INFO)

  Message: the rest of heartbeat info skipped ...

  ER_RPL_BINLOG_SKIPPING_REMAINING_HEARTBEAT_INFO was added in 8.0.2.

- Error: 10465 SQLSTATE: HY000 (ER_RPL_BINLOG_MASTER_USES_CHECKSUM_AND_SLAVE_CANT)

  Message: Master is configured to log replication events with checksum, but will not send such events to slaves that cannot process them

  ER_RPL_BINLOG_MASTER_USES_CHECKSUM_AND_SLAVE_CANT was added in 8.0.2.

- Error: 10466 SQLSTATE: HY000 (ER_NDB_QUERY_FAILED)

  Message: NDB: Query '%s' failed, error: %d: %s

  ER_NDB_QUERY_FAILED was added in 8.0.2.

- Error: 10467 SQLSTATE: HY000 (ER_KILLING_THREAD)

  Message: Killing thread %lu

  ER_KILLING_THREAD was added in 8.0.2.

- Error: 10468 SQLSTATE: HY000 (ER_DETACHING_SESSION_LEFT_BY_PLUGIN)

  Message: Plugin %s is deinitializing a thread but left a session attached. Detaching it forcefully.

  ER_DETACHING_SESSION_LEFT_BY_PLUGIN was added in 8.0.2.

- Error: 10469 SQLSTATE: HY000 (ER_CANT_DETACH_SESSION_LEFT_BY_PLUGIN)

  Message: Failed to detach the session.

  ER_CANT_DETACH_SESSION_LEFT_BY_PLUGIN was added in 8.0.2.

- Error: 10470 SQLSTATE: HY000 (ER_DETACHED_SESSIONS_LEFT_BY_PLUGIN)

  Message: Closed forcefully %u session%s left opened by plugin %s

  ER_DETACHED_SESSIONS_LEFT_BY_PLUGIN was added in 8.0.2.

- Error: 10471 SQLSTATE: HY000 (ER_FAILED_TO_DECREMENT_NUMBER_OF_THREADS)

  Message: Failed to decrement the number of threads

  ER_FAILED_TO_DECREMENT_NUMBER_OF_THREADS was added in 8.0.2.

- Error: 10472 SQLSTATE: HY000 (ER_PLUGIN_DID_NOT_DEINITIALIZE_THREADS)

  Message: Plugin %s did not deinitialize %u threads

  ER_PLUGIN_DID_NOT_DEINITIALIZE_THREADS was added in 8.0.2.

- Error: 10473 SQLSTATE: HY000 (ER_KILLED_THREADS_OF_PLUGIN)

  Message: Killed %u threads of plugin %s

  ER_KILLED_THREADS_OF_PLUGIN was added in 8.0.2.

- Error: 10474 SQLSTATE: HY000 (ER_NDB_SLAVE_MAX_REPLICATED_EPOCH_UNKNOWN)

  Message: NDB Slave : Could not determine maximum replicated epoch from %s.%s at Slave start, error %u %s

  ER_NDB_SLAVE_MAX_REPLICATED_EPOCH_UNKNOWN was added in 8.0.2.

- Error: 10475 SQLSTATE: HY000 (ER_NDB_SLAVE_MAX_REPLICATED_EPOCH_SET_TO)

  Message: NDB Slave : MaxReplicatedEpoch set to %llu (%u/%u) at Slave start

  ER_NDB_SLAVE_MAX_REPLICATED_EPOCH_SET_TO was added in 8.0.2.

- Error: 10476 SQLSTATE: HY000 (ER_NDB_NODE_ID_AND_MANAGEMENT_SERVER_INFO)

  Message: NDB: NodeID is %lu, management server '%s:%lu'

ER_NDB_NODE_ID_AND_MANAGEMENT_SERVER_INFO was added in 8.0.2.

- Error: 10477 SQLSTATE: HY000 (ER_NDB_DISCONNECT_INFO)

  Message: tid %u: node[%u] transaction_hint=%u, transaction_no_hint=%u

  ER_NDB_DISCONNECT_INFO was added in 8.0.2.

- Error: 10478 SQLSTATE: HY000 (ER_NDB_COLUMN_DEFAULTS_DIFFER)

  Message: NDB Internal error: Default values differ for column %u, ndb_default: %d

  ER_NDB_COLUMN_DEFAULTS_DIFFER was added in 8.0.2.

- Error: 10479 SQLSTATE: HY000 (ER_NDB_COLUMN_SHOULD_NOT_HAVE_NATIVE_DEFAULT)

  Message: NDB Internal error: Column %u has native default, but shouldn't. Flags=%u, type=%u

  ER_NDB_COLUMN_SHOULD_NOT_HAVE_NATIVE_DEFAULT was added in 8.0.2.

- Error: 10480 SQLSTATE: HY000 (ER_NDB_FIELD_INFO)

  Message: field[name: '%s', type: %u, real_type: %u, flags: 0x%x, is_null: %d]

  ER_NDB_FIELD_INFO was added in 8.0.2.

- Error: 10481 SQLSTATE: HY000 (ER_NDB_COLUMN_INFO)

  Message: ndbCol[name: '%s', type: %u, column_no: %d, nullable: %d]

  ER_NDB_COLUMN_INFO was added in 8.0.2.

- Error: 10482 SQLSTATE: HY000 (ER_NDB_OOM_IN_FIX_UNIQUE_INDEX_ATTR_ORDER)

  Message: fix_unique_index_attr_order: my_malloc(%u) failure

  ER_NDB_OOM_IN_FIX_UNIQUE_INDEX_ATTR_ORDER was added in 8.0.2.

- Error: 10483 SQLSTATE: HY000 (ER_NDB_SLAVE_MALFORMED_EVENT_RECEIVED_ON_TABLE)

  Message: NDB Slave : Malformed event received on table %s cannot parse. Stopping Slave.

  ER_NDB_SLAVE_MALFORMED_EVENT_RECEIVED_ON_TABLE was added in 8.0.2.

- Error: 10484 SQLSTATE: HY000 (ER_NDB_SLAVE_CONFLICT_FUNCTION_REQUIRES_ROLE)

  Message: NDB Slave : Conflict function %s defined on table %s requires ndb_slave_conflict_role variable to be set. Stopping slave.

  ER_NDB_SLAVE_CONFLICT_FUNCTION_REQUIRES_ROLE was added in 8.0.2.

- Error: 10485 SQLSTATE: HY000 (ER_NDB_SLAVE_CONFLICT_DETECTION_REQUIRES_TRANSACTION_IDS)

  Message: NDB Slave : Transactional conflict detection defined on table %s, but events received without transaction ids. Check --ndb-log-transaction-id setting on upstream Cluster.

  ER_NDB_SLAVE_CONFLICT_DETECTION_REQUIRES_TRANSACTION_IDS was added in 8.0.2.

- Error: 10486 SQLSTATE: HY000 (ER_NDB_SLAVE_BINLOG_MISSING_INFO_FOR_CONFLICT_DETECTION)

Message: NDB Slave : Binlog event on table %s missing info necessary for conflict detection. Check binlog format options on upstream cluster.

`ER_NDB_SLAVE_BINLOG_MISSING_INFO_FOR_CONFLICT_DETECTION` was added in 8.0.2.

- Error: `10487` SQLSTATE: `HY000` (`ER_NDB_ERROR_IN_READAUTOINCREMENTVALUE`)

  Message: Error %lu in readAutoIncrementValue(): %s

  `ER_NDB_ERROR_IN_READAUTOINCREMENTVALUE` was added in 8.0.2.

- Error: `10488` SQLSTATE: `HY000` (`ER_NDB_FOUND_UNCOMMITTED_AUTOCOMMIT`)

  Message: found uncommitted autocommit+rbwr transaction, commit status: %d

  `ER_NDB_FOUND_UNCOMMITTED_AUTOCOMMIT` was added in 8.0.2.

- Error: `10489` SQLSTATE: `HY000` (`ER_NDB_SLAVE_TOO_MANY_RETRIES`)

  Message: Ndb slave retried transaction %u time(s) in vain. Giving up.

  `ER_NDB_SLAVE_TOO_MANY_RETRIES` was added in 8.0.2.

- Error: `10490` SQLSTATE: `HY000` (`ER_NDB_SLAVE_ERROR_IN_UPDATE_CREATE_INFO`)

  Message: Error %lu in ::update_create_info(): %s

  `ER_NDB_SLAVE_ERROR_IN_UPDATE_CREATE_INFO` was added in 8.0.2.

- Error: `10491` SQLSTATE: `HY000` (`ER_NDB_SLAVE_CANT_ALLOCATE_TABLE_SHARE`)

  Message: NDB: allocating table share for %s failed

  `ER_NDB_SLAVE_CANT_ALLOCATE_TABLE_SHARE` was added in 8.0.2.

- Error: `10492` SQLSTATE: `HY000` (`ER_NDB_BINLOG_ERROR_INFO_FROM_DA`)

  Message: NDB Binlog: (%d)%s

  `ER_NDB_BINLOG_ERROR_INFO_FROM_DA` was added in 8.0.2.

- Error: `10493` SQLSTATE: `HY000` (`ER_NDB_BINLOG_CREATE_TABLE_EVENT`)

  Message: NDB Binlog: CREATE TABLE Event: %s

  `ER_NDB_BINLOG_CREATE_TABLE_EVENT` was added in 8.0.2.

- Error: `10494` SQLSTATE: `HY000` (`ER_NDB_BINLOG_FAILED_CREATE_TABLE_EVENT_OPERATIONS`)

  Message: NDB Binlog: FAILED CREATE TABLE event operations. Event: %s

  `ER_NDB_BINLOG_FAILED_CREATE_TABLE_EVENT_OPERATIONS` was added in 8.0.2.

- Error: `10495` SQLSTATE: `HY000` (`ER_NDB_BINLOG_RENAME_EVENT`)

  Message: NDB Binlog: RENAME Event: %s

  `ER_NDB_BINLOG_RENAME_EVENT` was added in 8.0.2.

- Error: `10496` SQLSTATE: `HY000` (`ER_NDB_BINLOG_FAILED_CREATE_EVENT_OPERATIONS_DURING_RENAME`)

Message: NDB Binlog: FAILED create event operations during RENAME. Event %s

ER_NDB_BINLOG_FAILED_CREATE_EVENT_OPERATIONS_DURING_RENAME was added in 8.0.2.

- Error: 10497 SQLSTATE: HY000 (ER_NDB_UNEXPECTED_RENAME_TYPE)

  Message: Unexpected rename case detected, sql_command: %d

  ER_NDB_UNEXPECTED_RENAME_TYPE was added in 8.0.2.

- Error: 10498 SQLSTATE: HY000 (ER_NDB_ERROR_IN_GET_AUTO_INCREMENT)

  Message: Error %lu in ::get_auto_increment(): %s

  ER_NDB_ERROR_IN_GET_AUTO_INCREMENT was added in 8.0.2.

- Error: 10499 SQLSTATE: HY000 (ER_NDB_CREATING_SHARE_IN_OPEN)

  Message: Calling ndbcluster_create_binlog_setup(%s) in ::open

  ER_NDB_CREATING_SHARE_IN_OPEN was added in 8.0.2.

- Error: 10500 SQLSTATE: HY000 (ER_NDB_TABLE_OPENED_READ_ONLY)

  Message: table '%s' opened read only

  ER_NDB_TABLE_OPENED_READ_ONLY was added in 8.0.2.

- Error: 10501 SQLSTATE: HY000 (ER_NDB_INITIALIZE_GIVEN_CLUSTER_PLUGIN_DISABLED)

  Message: NDB: '--initialize' -> ndbcluster plugin disabled

  ER_NDB_INITIALIZE_GIVEN_CLUSTER_PLUGIN_DISABLED was added in 8.0.2.

- Error: 10502 SQLSTATE: HY000 (ER_NDB_BINLOG_FORMAT_CHANGED_FROM_STMT_TO_MIXED)

  Message: NDB: Changed global value of binlog_format from STATEMENT to MIXED

  ER_NDB_BINLOG_FORMAT_CHANGED_FROM_STMT_TO_MIXED was added in 8.0.2.

- Error: 10503 SQLSTATE: HY000 (ER_NDB_TRAILING_SHARE_RELEASED_BY_CLOSE_CACHED_TABLES)

  Message: NDB_SHARE: trailing share %s, released by close_cached_tables

  ER_NDB_TRAILING_SHARE_RELEASED_BY_CLOSE_CACHED_TABLES was added in 8.0.2.

- Error: 10504 SQLSTATE: HY000 (ER_NDB_SHARE_ALREADY_EXISTS)

  Message: NDB_SHARE: %s already exists use_count=%d. Moving away for safety, but possible memleak.

  ER_NDB_SHARE_ALREADY_EXISTS was added in 8.0.2.

- Error: 10505 SQLSTATE: HY000 (ER_NDB_HANDLE_TRAILING_SHARE_INFO)

  Message: handle_trailing_share: %s use_count: %u

  ER_NDB_HANDLE_TRAILING_SHARE_INFO was added in 8.0.2.

- Error: 10506 SQLSTATE: HY000 (ER_NDB_CLUSTER_GET_SHARE_INFO)

  Message: ndbcluster_get_share: %s use_count: %u

ER_NDB_CLUSTER_GET_SHARE_INFO was added in 8.0.2.

- Error: 10507 SQLSTATE: HY000 (ER_NDB_CLUSTER_REAL_FREE_SHARE_INFO)

  Message: ndbcluster_real_free_share: %s use_count: %u

  ER_NDB_CLUSTER_REAL_FREE_SHARE_INFO was added in 8.0.2.

- Error: 10508 SQLSTATE: HY000 (ER_NDB_CLUSTER_REAL_FREE_SHARE_DROP_FAILED)

  Message: ndbcluster_real_free_share: %s, still open - ignored 'free' (leaked?)

  ER_NDB_CLUSTER_REAL_FREE_SHARE_DROP_FAILED was added in 8.0.2.

- Error: 10509 SQLSTATE: HY000 (ER_NDB_CLUSTER_FREE_SHARE_INFO)

  Message: ndbcluster_free_share: %s use_count: %u

  ER_NDB_CLUSTER_FREE_SHARE_INFO was added in 8.0.2.

- Error: 10510 SQLSTATE: HY000 (ER_NDB_CLUSTER_MARK_SHARE_DROPPED_INFO)

  Message: ndbcluster_mark_share_dropped: %s use_count: %u

  ER_NDB_CLUSTER_MARK_SHARE_DROPPED_INFO was added in 8.0.2.

- Error: 10511 SQLSTATE: HY000 (ER_NDB_CLUSTER_MARK_SHARE_DROPPED_DESTROYING_SHARE)

  Message: ndbcluster_mark_share_dropped: destroys share %s

  ER_NDB_CLUSTER_MARK_SHARE_DROPPED_DESTROYING_SHARE was added in 8.0.2.

- Error: 10512 SQLSTATE: HY000 (ER_NDB_CLUSTER_OOM_THD_NDB)

  Message: Could not allocate Thd_ndb object

  ER_NDB_CLUSTER_OOM_THD_NDB was added in 8.0.2.

- Error: 10513 SQLSTATE: HY000 (ER_NDB_BINLOG_NDB_TABLES_INITIALLY_READ_ONLY)

  Message: NDB Binlog: Ndb tables initially read only.

  ER_NDB_BINLOG_NDB_TABLES_INITIALLY_READ_ONLY was added in 8.0.2.

- Error: 10514 SQLSTATE: HY000 (ER_NDB_UTIL_THREAD_OOM)

  Message: ndb util thread: malloc failure, query cache not maintained properly

  ER_NDB_UTIL_THREAD_OOM was added in 8.0.2.

- Error: 10515 SQLSTATE: HY000 (ER_NDB_ILLEGAL_VALUE_FOR_NDB_RECV_THREAD_CPU_MASK)

  Message: Trying to set ndb_recv_thread_cpu_mask to illegal value = %s, ignored

  ER_NDB_ILLEGAL_VALUE_FOR_NDB_RECV_THREAD_CPU_MASK was added in 8.0.2.

- Error: 10516 SQLSTATE: HY000 (ER_NDB_TOO_MANY_CPUS_IN_NDB_RECV_THREAD_CPU_MASK)

  Message: Trying to set too many CPU's in ndb_recv_thread_cpu_mask, ignored this variable, erroneus value = %s

ER_NDB_TOO_MANY_CPUS_IN_NDB_RECV_THREAD_CPU_MASK was added in 8.0.2.

- Error: 10517 SQLSTATE: HY000 (ER_DBUG_CHECK_SHARES_OPEN)

  Message: dbug_check_shares open:

  ER_DBUG_CHECK_SHARES_OPEN was added in 8.0.2.

- Error: 10518 SQLSTATE: HY000 (ER_DBUG_CHECK_SHARES_INFO)

  Message: %s.%s: state: %s(%u) use_count: %u

  ER_DBUG_CHECK_SHARES_INFO was added in 8.0.2.

- Error: 10519 SQLSTATE: HY000 (ER_DBUG_CHECK_SHARES_DROPPED)

  Message: dbug_check_shares dropped:

  ER_DBUG_CHECK_SHARES_DROPPED was added in 8.0.2.

- Error: 10520 SQLSTATE: HY000 (ER_INVALID_OR_OLD_TABLE_OR_DB_NAME)

  Message: Invalid (old?) table or database name '%s'

  ER_INVALID_OR_OLD_TABLE_OR_DB_NAME was added in 8.0.2.

- Error: 10521 SQLSTATE: HY000 (ER_TC_RECOVERING_AFTER_CRASH_USING)

  Message: Recovering after a crash using %s

  ER_TC_RECOVERING_AFTER_CRASH_USING was added in 8.0.2.

- Error: 10522 SQLSTATE: HY000 (ER_TC_CANT_AUTO_RECOVER_WITH_TC_HEURISTIC_RECOVER)

  Message: Cannot perform automatic crash recovery when --tc-heuristic-recover is used

  ER_TC_CANT_AUTO_RECOVER_WITH_TC_HEURISTIC_RECOVER was added in 8.0.2.

- Error: 10523 SQLSTATE: HY000 (ER_TC_BAD_MAGIC_IN_TC_LOG)

  Message: Bad magic header in tc log

  ER_TC_BAD_MAGIC_IN_TC_LOG was added in 8.0.2.

- Error: 10524 SQLSTATE: HY000 (ER_TC_NEED_N_SE_SUPPORTING_2PC_FOR_RECOVERY)

  Message: Recovery failed! You must enable exactly %d storage engines that support two-phase commit protocol

  ER_TC_NEED_N_SE_SUPPORTING_2PC_FOR_RECOVERY was added in 8.0.2.

- Error: 10525 SQLSTATE: HY000 (ER_TC_RECOVERY_FAILED_THESE_ARE_YOUR_OPTIONS)

  Message: Crash recovery failed. Either correct the problem (if it's, for example, out of memory error) and restart, or delete tc log and start mysqld with --tc-heuristic-recover={commit|rollback}

  ER_TC_RECOVERY_FAILED_THESE_ARE_YOUR_OPTIONS was added in 8.0.2.

- Error: 10526 SQLSTATE: HY000 (ER_TC_HEURISTIC_RECOVERY_MODE)

  Message: Heuristic crash recovery mode

ER_TC_HEURISTIC_RECOVERY_MODE was added in 8.0.2.

- Error: 10527 SQLSTATE: HY000 (ER_TC_HEURISTIC_RECOVERY_FAILED)

  Message: Heuristic crash recovery failed

  ER_TC_HEURISTIC_RECOVERY_FAILED was added in 8.0.2.

- Error: 10528 SQLSTATE: HY000 (ER_TC_RESTART_WITHOUT_TC_HEURISTIC_RECOVER)

  Message: Please restart mysqld without --tc-heuristic-recover

  ER_TC_RESTART_WITHOUT_TC_HEURISTIC_RECOVER was added in 8.0.2.

- Error: 10529 SQLSTATE: HY000 (ER_RPL_SLAVE_FAILED_TO_CREATE_OR_RECOVER_INFO_REPOSITORIES)

  Message: Failed to create or recover replication info repositories.

  ER_RPL_SLAVE_FAILED_TO_CREATE_OR_RECOVER_INFO_REPOSITORIES was added in 8.0.2.

- Error: 10530 SQLSTATE: HY000 (ER_RPL_SLAVE_AUTO_POSITION_IS_1_AND_GTID_MODE_IS_OFF)

  Message: Detected misconfiguration: replication channel '%s' was configured with AUTO_POSITION = 1, but the server was started with --gtid-mode=off. Either reconfigure replication using CHANGE MASTER TO MASTER_AUTO_POSITION = 0 FOR CHANNEL '%s', or change GTID_MODE to some value other than OFF, before starting the slave receiver thread.

  ER_RPL_SLAVE_AUTO_POSITION_IS_1_AND_GTID_MODE_IS_OFF was added in 8.0.2.

- Error: 10531 SQLSTATE: HY000 (ER_RPL_SLAVE_CANT_START_SLAVE_FOR_CHANNEL)

  Message: Slave: Could not start slave for channel '%s'. operation discontinued

  ER_RPL_SLAVE_CANT_START_SLAVE_FOR_CHANNEL was added in 8.0.2.

- Error: 10532 SQLSTATE: HY000 (ER_RPL_SLAVE_CANT_STOP_SLAVE_FOR_CHANNEL)

  Message: Slave: Could not stop slave for channel '%s' operation discontinued

  ER_RPL_SLAVE_CANT_STOP_SLAVE_FOR_CHANNEL was added in 8.0.2.

- Error: 10533 SQLSTATE: HY000 (ER_RPL_RECOVERY_NO_ROTATE_EVENT_FROM_MASTER)

  Message: Error during --relay-log-recovery: Could not locate rotate event from the master.

  ER_RPL_RECOVERY_NO_ROTATE_EVENT_FROM_MASTER was added in 8.0.2.

- Error: 10534 SQLSTATE: HY000 (ER_RPL_RECOVERY_ERROR_READ_RELAY_LOG)

  Message: Error during --relay-log-recovery: Error reading events from relay log: %d

  ER_RPL_RECOVERY_ERROR_READ_RELAY_LOG was added in 8.0.2.

- Error: 10535 SQLSTATE: HY000 (ER_RPL_RECOVERY_ERROR_FREEING_IO_CACHE)

  Message: Error during --relay-log-recovery: Error while freeing IO_CACHE object

  ER_RPL_RECOVERY_ERROR_FREEING_IO_CACHE was added in 8.0.2, removed after 8.0.12.

- Error: 10536 SQLSTATE: HY000 (ER_RPL_RECOVERY_SKIPPED_GROUP_REPLICATION_CHANNEL)

Message: Relay log recovery skipped for group replication channel.

`ER_RPL_RECOVERY_SKIPPED_GROUP_REPLICATION_CHANNEL` was added in 8.0.2.

- Error: `10537` SQLSTATE: `HY000` (`ER_RPL_RECOVERY_ERROR`)

  Message: Error during --relay-log-recovery: %s

  `ER_RPL_RECOVERY_ERROR` was added in 8.0.2.

- Error: `10538` SQLSTATE: `HY000` (`ER_RPL_RECOVERY_IO_ERROR_READING_RELAY_LOG_INDEX`)

  Message: Error during --relay-log-recovery: Could not read relay log index file due to an IO error.

  `ER_RPL_RECOVERY_IO_ERROR_READING_RELAY_LOG_INDEX` was added in 8.0.2.

- Error: `10539` SQLSTATE: `HY000` (`ER_RPL_RECOVERY_FILE_MASTER_POS_INFO`)

  Message: Recovery from master pos %ld and file %s%s. Previous relay log pos and relay log file had been set to %lld, %s respectively.

  `ER_RPL_RECOVERY_FILE_MASTER_POS_INFO` was added in 8.0.2.

- Error: `10540` SQLSTATE: `HY000` (`ER_RPL_RECOVERY_REPLICATE_SAME_SERVER_ID_REQUIRES_POSITION`)

  Message: Error during --relay-log-recovery: replicate_same_server_id is in use and sql thread's positions are not initialized, hence relay log recovery cannot happen.

  `ER_RPL_RECOVERY_REPLICATE_SAME_SERVER_ID_REQUIRES_POSITION` was added in 8.0.2.

- Error: `10541` SQLSTATE: `HY000` (`ER_RPL_MTS_RECOVERY_STARTING_COORDINATOR`)

  Message: MTS recovery: starting coordinator thread to fill MTS gaps.

  `ER_RPL_MTS_RECOVERY_STARTING_COORDINATOR` was added in 8.0.2.

- Error: `10542` SQLSTATE: `HY000` (`ER_RPL_MTS_RECOVERY_FAILED_TO_START_COORDINATOR`)

  Message: MTS recovery: failed to start the coordinator thread. Check the error log for additional details.

  `ER_RPL_MTS_RECOVERY_FAILED_TO_START_COORDINATOR` was added in 8.0.2.

- Error: `10543` SQLSTATE: `HY000` (`ER_RPL_MTS_AUTOMATIC_RECOVERY_FAILED`)

  Message: MTS recovery: automatic recovery failed. Either the slave server had stopped due to an error during an earlier session or relay logs are corrupted.Fix the cause of the slave side error and restart the slave server or consider using RESET SLAVE.

  `ER_RPL_MTS_AUTOMATIC_RECOVERY_FAILED` was added in 8.0.2.

- Error: `10544` SQLSTATE: `HY000` (`ER_RPL_MTS_RECOVERY_CANT_OPEN_RELAY_LOG`)

  Message: Failed to open the relay log '%s' (relay_log_pos %s).

  `ER_RPL_MTS_RECOVERY_CANT_OPEN_RELAY_LOG` was added in 8.0.2.

- Error: `10545` SQLSTATE: `HY000` (`ER_RPL_MTS_RECOVERY_SUCCESSFUL`)

  Message: MTS recovery: completed successfully.

ER_RPL_MTS_RECOVERY_SUCCESSFUL was added in 8.0.2.

- Error: 10546 SQLSTATE: HY000 (ER_RPL_SERVER_ID_MISSING)

  Message: Server id not set, will not start slave%s

  ER_RPL_SERVER_ID_MISSING was added in 8.0.2.

- Error: 10547 SQLSTATE: HY000 (ER_RPL_CANT_CREATE_SLAVE_THREAD)

  Message: Can't create slave thread%s.

  ER_RPL_CANT_CREATE_SLAVE_THREAD was added in 8.0.2.

- Error: 10548 SQLSTATE: HY000 (ER_RPL_SLAVE_IO_THREAD_WAS_KILLED)

  Message: The slave IO thread%s was killed while executing initialization query '%s'

  ER_RPL_SLAVE_IO_THREAD_WAS_KILLED was added in 8.0.2.

- Error: 10549 SQLSTATE: HY000 (ER_RPL_SLAVE_MASTER_UUID_HAS_CHANGED)

  Message: The master's UUID has changed, although this should not happen unless you have changed it manually. The old UUID was %s.

  ER_RPL_SLAVE_MASTER_UUID_HAS_CHANGED was added in 8.0.2.

- Error: 10550 SQLSTATE: HY000 (ER_RPL_SLAVE_USES_CHECKSUM_AND_MASTER_PRE_50)

  Message: Found a master with MySQL server version older than 5.0. With checksums enabled on the slave, replication might not work correctly. To ensure correct replication, restart the slave server with --slave_sql_verify_checksum=0.

  ER_RPL_SLAVE_USES_CHECKSUM_AND_MASTER_PRE_50 was added in 8.0.2.

- Error: 10551 SQLSTATE: HY000 (ER_RPL_SLAVE_SECONDS_BEHIND_MASTER_DUBIOUS)

  Message: "SELECT UNIX_TIMESTAMP()" failed on master, do not trust column Seconds_Behind_Master of SHOW SLAVE STATUS. Error: %s (%d)

  ER_RPL_SLAVE_SECONDS_BEHIND_MASTER_DUBIOUS was added in 8.0.2.

- Error: 10552 SQLSTATE: HY000 (ER_RPL_SLAVE_CANT_FLUSH_MASTER_INFO_FILE)

  Message: Failed to flush master info file.

  ER_RPL_SLAVE_CANT_FLUSH_MASTER_INFO_FILE was added in 8.0.2.

- Error: 10553 SQLSTATE: HY000 (ER_RPL_SLAVE_REPORT_HOST_TOO_LONG)

  Message: The length of report_host is %zu. It is larger than the max length(%d), so this slave cannot be registered to the master%s.

  ER_RPL_SLAVE_REPORT_HOST_TOO_LONG was added in 8.0.2.

- Error: 10554 SQLSTATE: HY000 (ER_RPL_SLAVE_REPORT_USER_TOO_LONG)

  Message: The length of report_user is %zu. It is larger than the max length(%d), so this slave cannot be registered to the master%s.

  ER_RPL_SLAVE_REPORT_USER_TOO_LONG was added in 8.0.2.

- Error: 10555 SQLSTATE: HY000 (ER_RPL_SLAVE_REPORT_PASSWORD_TOO_LONG)

Message: The length of report_password is %zu. It is larger than the max length(%d), so this slave cannot be registered to the master%s.

ER_RPL_SLAVE_REPORT_PASSWORD_TOO_LONG was added in 8.0.2.

- Error: 10556 SQLSTATE: HY000 (ER_RPL_SLAVE_ERROR_RETRYING)

  Message: Error on %s: %d %s, will retry in %d secs

  ER_RPL_SLAVE_ERROR_RETRYING was added in 8.0.2.

- Error: 10557 SQLSTATE: HY000 (ER_RPL_SLAVE_ERROR_READING_FROM_SERVER)

  Message: Error reading packet from server%s: %s (server_errno=%d)

  ER_RPL_SLAVE_ERROR_READING_FROM_SERVER was added in 8.0.2.

- Error: 10558 SQLSTATE: HY000 (ER_RPL_SLAVE_DUMP_THREAD_KILLED_BY_MASTER)

  Message: Slave%s: received end packet from server due to dump thread being killed on master. Dump threads are killed for example during master shutdown, explicitly by a user, or when the master receives a binlog send request from a duplicate server UUID <%s> : Error %s

  ER_RPL_SLAVE_DUMP_THREAD_KILLED_BY_MASTER was added in 8.0.2.

- Error: 10559 SQLSTATE: HY000 (ER_RPL_MTS_STATISTICS)

  Message: Multi-threaded slave statistics%s: seconds elapsed = %lu; events assigned = %llu; worker queues filled over overrun level = %lu; waited due a Worker queue full = %lu; waited due the total size = %lu; waited at clock conflicts = %llu waited (count) when Workers occupied = %lu waited when Workers occupied = %llu

  ER_RPL_MTS_STATISTICS was added in 8.0.2.

- Error: 10560 SQLSTATE: HY000 (ER_RPL_MTS_RECOVERY_COMPLETE)

  Message: Slave%s: MTS Recovery has completed at relay log %s, position %llu master log %s, position %llu.

  ER_RPL_MTS_RECOVERY_COMPLETE was added in 8.0.2.

- Error: 10561 SQLSTATE: HY000 (ER_RPL_SLAVE_CANT_INIT_RELAY_LOG_POSITION)

  Message: Error initializing relay log position%s: %s

  ER_RPL_SLAVE_CANT_INIT_RELAY_LOG_POSITION was added in 8.0.2.

- Error: 10562 SQLSTATE: HY000 (ER_RPL_SLAVE_CONNECTED_TO_MASTER_REPLICATION_STARTED)

  Message: Slave I/O thread%s: connected to master '%s@%s:%d',replication started in log '%s' at position %s

  ER_RPL_SLAVE_CONNECTED_TO_MASTER_REPLICATION_STARTED was added in 8.0.2.

- Error: 10563 SQLSTATE: HY000 (ER_RPL_SLAVE_IO_THREAD_KILLED)

  Message: Slave I/O thread%s killed while connecting to master

  ER_RPL_SLAVE_IO_THREAD_KILLED was added in 8.0.2.

- Error: 10564 SQLSTATE: HY000 (ER_RPL_SLAVE_IO_THREAD_CANT_REGISTER_ON_MASTER)

Message: Slave I/O thread couldn't register on master

ER_RPL_SLAVE_IO_THREAD_CANT_REGISTER_ON_MASTER was added in 8.0.2.

- Error: 10565 SQLSTATE: HY000 (ER_RPL_SLAVE_FORCING_TO_RECONNECT_IO_THREAD)

  Message: Forcing to reconnect slave I/O thread%s

  ER_RPL_SLAVE_FORCING_TO_RECONNECT_IO_THREAD was added in 8.0.2.

- Error: 10566 SQLSTATE: HY000 (ER_RPL_SLAVE_ERROR_REQUESTING_BINLOG_DUMP)

  Message: Failed on request_dump()%s

  ER_RPL_SLAVE_ERROR_REQUESTING_BINLOG_DUMP was added in 8.0.2.

- Error: 10567 SQLSTATE: HY000 (ER_RPL_LOG_ENTRY_EXCEEDS_SLAVE_MAX_ALLOWED_PACKET)

  Message: Log entry on master is longer than slave_max_allowed_packet (%lu) on slave. If the entry is correct, restart the server with a higher value of slave_max_allowed_packet

  ER_RPL_LOG_ENTRY_EXCEEDS_SLAVE_MAX_ALLOWED_PACKET was added in 8.0.2.

- Error: 10568 SQLSTATE: HY000 (ER_RPL_SLAVE_STOPPING_AS_MASTER_OOM)

  Message: Stopping slave I/O thread due to out-of-memory error from master

  ER_RPL_SLAVE_STOPPING_AS_MASTER_OOM was added in 8.0.2.

- Error: 10569 SQLSTATE: HY000 (ER_RPL_SLAVE_IO_THREAD_ABORTED_WAITING_FOR_RELAY_LOG_SPACE)

  Message: Slave I/O thread aborted while waiting for relay log space

  ER_RPL_SLAVE_IO_THREAD_ABORTED_WAITING_FOR_RELAY_LOG_SPACE was added in 8.0.2.

- Error: 10570 SQLSTATE: HY000 (ER_RPL_SLAVE_IO_THREAD_EXITING)

  Message: Slave I/O thread exiting%s, read up to log '%s', position %s

  ER_RPL_SLAVE_IO_THREAD_EXITING was added in 8.0.2.

- Error: 10571 SQLSTATE: HY000 (ER_RPL_SLAVE_CANT_INITIALIZE_SLAVE_WORKER)

  Message: Failed during slave worker initialization%s

  ER_RPL_SLAVE_CANT_INITIALIZE_SLAVE_WORKER was added in 8.0.2.

- Error: 10572 SQLSTATE: HY000 (ER_RPL_MTS_GROUP_RECOVERY_RELAY_LOG_INFO_FOR_WORKER)

  Message: Slave: MTS group recovery relay log info based on Worker-Id %lu, group_relay_log_name %s, group_relay_log_pos %llu group_master_log_name %s, group_master_log_pos %llu

  ER_RPL_MTS_GROUP_RECOVERY_RELAY_LOG_INFO_FOR_WORKER was added in 8.0.2.

- Error: 10573 SQLSTATE: HY000 (ER_RPL_ERROR_LOOKING_FOR_LOG)

  Message: Error looking for %s.

  ER_RPL_ERROR_LOOKING_FOR_LOG was added in 8.0.2.

- Error: 10574 SQLSTATE: HY000 (ER_RPL_MTS_GROUP_RECOVERY_RELAY_LOG_INFO)

  Message: Slave: MTS group recovery relay log info group_master_log_name %s, event_master_log_pos %llu.

  ER_RPL_MTS_GROUP_RECOVERY_RELAY_LOG_INFO was added in 8.0.2.

- Error: 10575 SQLSTATE: HY000 (ER_RPL_CANT_FIND_FOLLOWUP_FILE)

  Message: Error looking for file after %s.

  ER_RPL_CANT_FIND_FOLLOWUP_FILE was added in 8.0.2.

- Error: 10576 SQLSTATE: HY000 (ER_RPL_MTS_CHECKPOINT_PERIOD_DIFFERS_FROM_CNT)

  Message: This an error cnt != mts_checkpoint_period

  ER_RPL_MTS_CHECKPOINT_PERIOD_DIFFERS_FROM_CNT was added in 8.0.2.

- Error: 10577 SQLSTATE: HY000 (ER_RPL_SLAVE_WORKER_THREAD_CREATION_FAILED)

  Message: Failed during slave worker thread creation%s

  ER_RPL_SLAVE_WORKER_THREAD_CREATION_FAILED was added in 8.0.2.

- Error: 10578 SQLSTATE: HY000 (ER_RPL_SLAVE_WORKER_THREAD_CREATION_FAILED_WITH_ERRNO)

  Message: Failed during slave worker thread creation%s (errno= %d)

  ER_RPL_SLAVE_WORKER_THREAD_CREATION_FAILED_WITH_ERRNO was added in 8.0.2.

- Error: 10579 SQLSTATE: HY000 (ER_RPL_SLAVE_FAILED_TO_INIT_PARTITIONS_HASH)

  Message: Failed to init partitions hash

  ER_RPL_SLAVE_FAILED_TO_INIT_PARTITIONS_HASH was added in 8.0.2.

- Error: 10580 SQLSTATE: HY000 (ER_RPL_SLAVE_NDB_TABLES_NOT_AVAILABLE)

  Message: Slave SQL thread : NDB : Tables not available after %lu seconds. Consider increasing --ndb-wait-setup value

  ER_RPL_SLAVE_NDB_TABLES_NOT_AVAILABLE was added in 8.0.2.

- Error: 10581 SQLSTATE: HY000 (ER_RPL_SLAVE_SQL_THREAD_STARTING)

  Message: Slave SQL thread%s initialized, starting replication in log '%s' at position %s, relay log '%s' position: %s

  ER_RPL_SLAVE_SQL_THREAD_STARTING was added in 8.0.2.

- Error: 10582 SQLSTATE: HY000 (ER_RPL_SLAVE_SKIP_COUNTER_EXECUTED)

  Message: 'SQL_SLAVE_SKIP_COUNTER=%ld' executed at relay_log_file='%s', relay_log_pos='%ld', master_log_name='%s', master_log_pos='%ld' and new position at relay_log_file='%s', relay_log_pos='%ld', master_log_name='%s', master_log_pos='%ld'

  ER_RPL_SLAVE_SKIP_COUNTER_EXECUTED was added in 8.0.2.

- Error: 10583 SQLSTATE: HY000 (ER_RPL_SLAVE_ADDITIONAL_ERROR_INFO_FROM_DA)

  Message: Slave (additional info): %s Error_code: MY-%06d

ER_RPL_SLAVE_ADDITIONAL_ERROR_INFO_FROM_DA was added in 8.0.2.

- Error: 10584 SQLSTATE: HY000 (ER_RPL_SLAVE_ERROR_INFO_FROM_DA)

  Message: Slave: %s Error_code: MY-%06d

  ER_RPL_SLAVE_ERROR_INFO_FROM_DA was added in 8.0.2.

- Error: 10585 SQLSTATE: HY000 (ER_RPL_SLAVE_ERROR_LOADING_USER_DEFINED_LIBRARY)

  Message: Error loading user-defined library, slave SQL thread aborted. Install the missing library, and restart the slave SQL thread with "SLAVE START". We stopped at log '%s' position %s

  ER_RPL_SLAVE_ERROR_LOADING_USER_DEFINED_LIBRARY was added in 8.0.2.

- Error: 10586 SQLSTATE: HY000 (ER_RPL_SLAVE_ERROR_RUNNING_QUERY)

  Message: Error running query, slave SQL thread aborted. Fix the problem, and restart the slave SQL thread with "SLAVE START". We stopped at log '%s' position %s

  ER_RPL_SLAVE_ERROR_RUNNING_QUERY was added in 8.0.2.

- Error: 10587 SQLSTATE: HY000 (ER_RPL_SLAVE_SQL_THREAD_EXITING)

  Message: Slave SQL thread%s exiting, replication stopped in log '%s' at position %s

  ER_RPL_SLAVE_SQL_THREAD_EXITING was added in 8.0.2.

- Error: 10588 SQLSTATE: HY000 (ER_RPL_SLAVE_READ_INVALID_EVENT_FROM_MASTER)

  Message: Read invalid event from master: '%s', master could be corrupt but a more likely cause of this is a bug

  ER_RPL_SLAVE_READ_INVALID_EVENT_FROM_MASTER was added in 8.0.2.

- Error: 10589 SQLSTATE: HY000 (ER_RPL_SLAVE_QUEUE_EVENT_FAILED_INVALID_CONFIGURATION)

  Message: The queue event failed for channel '%s' as its configuration is invalid.

  ER_RPL_SLAVE_QUEUE_EVENT_FAILED_INVALID_CONFIGURATION was added in 8.0.2.

- Error: 10590 SQLSTATE: HY000 (ER_RPL_SLAVE_IO_THREAD_DETECTED_UNEXPECTED_EVENT_SEQUENCE)

  Message: An unexpected event sequence was detected by the IO thread while queuing the event received from master '%s' binary log file, at position %llu.

  ER_RPL_SLAVE_IO_THREAD_DETECTED_UNEXPECTED_EVENT_SEQUENCE was added in 8.0.2.

- Error: 10591 SQLSTATE: HY000 (ER_RPL_SLAVE_CANT_USE_CHARSET)

  Message: '%s' can not be used as client character set. '%s' will be used as default client character set while connecting to master.

  ER_RPL_SLAVE_CANT_USE_CHARSET was added in 8.0.2.

- Error: 10592 SQLSTATE: HY000 (ER_RPL_SLAVE_CONNECTED_TO_MASTER_REPLICATION_RESUMED)

  Message: Slave%s: connected to master '%s@%s:%d',replication resumed in log '%s' at position %s

  ER_RPL_SLAVE_CONNECTED_TO_MASTER_REPLICATION_RESUMED was added in 8.0.2.

- Error: 10593 SQLSTATE: HY000 (ER_RPL_SLAVE_NEXT_LOG_IS_ACTIVE)

  Message: next log '%s' is active

  ER_RPL_SLAVE_NEXT_LOG_IS_ACTIVE was added in 8.0.2.

- Error: 10594 SQLSTATE: HY000 (ER_RPL_SLAVE_NEXT_LOG_IS_INACTIVE)

  Message: next log '%s' is not active

  ER_RPL_SLAVE_NEXT_LOG_IS_INACTIVE was added in 8.0.2.

- Error: 10595 SQLSTATE: HY000 (ER_RPL_SLAVE_SQL_THREAD_IO_ERROR_READING_EVENT)

  Message: Slave SQL thread%s: I/O error reading event (errno: %d cur_log->error: %d)

  ER_RPL_SLAVE_SQL_THREAD_IO_ERROR_READING_EVENT was added in 8.0.2.

- Error: 10596 SQLSTATE: HY000 (ER_RPL_SLAVE_ERROR_READING_RELAY_LOG_EVENTS)

  Message: Error reading relay log event%s: %s

  ER_RPL_SLAVE_ERROR_READING_RELAY_LOG_EVENTS was added in 8.0.2.

- Error: 10597 SQLSTATE: HY000 (ER_SLAVE_CHANGE_MASTER_TO_EXECUTED)

  Message: 'CHANGE MASTER TO%s executed'. Previous state master_host='%s', master_port= %u, master_log_file='%s', master_log_pos= %ld, master_bind='%s'. New state master_host='%s', master_port= %u, master_log_file='%s', master_log_pos= %ld, master_bind='%s'.

  ER_SLAVE_CHANGE_MASTER_TO_EXECUTED was added in 8.0.2.

- Error: 10598 SQLSTATE: HY000 (ER_RPL_SLAVE_NEW_MASTER_INFO_NEEDS_REPOS_TYPE_OTHER_THAN_FILE)

  Message: Slave: Cannot create new master info structure when repositories are of type FILE. Convert slave repositories to TABLE to replicate from multiple sources.

  ER_RPL_SLAVE_NEW_MASTER_INFO_NEEDS_REPOS_TYPE_OTHER_THAN_FILE was added in 8.0.2.

- Error: 10599 SQLSTATE: HY000 (ER_RPL_FAILED_TO_STAT_LOG_IN_INDEX)

  Message: log %s listed in the index, but failed to stat.

  ER_RPL_FAILED_TO_STAT_LOG_IN_INDEX was added in 8.0.2.

- Error: 10600 SQLSTATE: HY000 (ER_RPL_LOG_NOT_FOUND_WHILE_COUNTING_RELAY_LOG_SPACE)

  Message: Could not find first log while counting relay log space.

  ER_RPL_LOG_NOT_FOUND_WHILE_COUNTING_RELAY_LOG_SPACE was added in 8.0.2.

- Error: 10601 SQLSTATE: HY000 (ER_SLAVE_CANT_USE_TEMPDIR)

  Message: Unable to use slave's temporary directory '%s'.

  ER_SLAVE_CANT_USE_TEMPDIR was added in 8.0.2.

- Error: 10602 SQLSTATE: HY000 (ER_RPL_RELAY_LOG_NEEDS_FILE_NOT_DIRECTORY)

  Message: Path '%s' is a directory name, please specify a file name for --relay-log option.

ER_RPL_RELAY_LOG_NEEDS_FILE_NOT_DIRECTORY was added in 8.0.2.

- Error: 10603 SQLSTATE: HY000 (ER_RPL_RELAY_LOG_INDEX_NEEDS_FILE_NOT_DIRECTORY)

  Message: Path '%s' is a directory name, please specify a file name for --relay-log-index option.

  ER_RPL_RELAY_LOG_INDEX_NEEDS_FILE_NOT_DIRECTORY was added in 8.0.2.

- Error: 10604 SQLSTATE: HY000 (ER_RPL_PLEASE_USE_OPTION_RELAY_LOG)

  Message: Neither --relay-log nor --relay-log-index were used; so replication may break when this MySQL server acts as a slave and has his hostname changed!! Please use '--relay-log=%s' to avoid this problem.

  ER_RPL_PLEASE_USE_OPTION_RELAY_LOG was added in 8.0.2.

- Error: 10605 SQLSTATE: HY000 (ER_RPL_OPEN_INDEX_FILE_FAILED)

  Message: Failed in open_index_file() called from Relay_log_info::rli_init_info().

  ER_RPL_OPEN_INDEX_FILE_FAILED was added in 8.0.2.

- Error: 10606 SQLSTATE: HY000 (ER_RPL_CANT_INITIALIZE_GTID_SETS_IN_RLI_INIT_INFO)

  Message: Failed in init_gtid_sets() called from Relay_log_info::rli_init_info().

  ER_RPL_CANT_INITIALIZE_GTID_SETS_IN_RLI_INIT_INFO was added in 8.0.2.

- Error: 10607 SQLSTATE: HY000 (ER_RPL_CANT_OPEN_LOG_IN_RLI_INIT_INFO)

  Message: Failed in open_log() called from Relay_log_info::rli_init_info().

  ER_RPL_CANT_OPEN_LOG_IN_RLI_INIT_INFO was added in 8.0.2.

- Error: 10608 SQLSTATE: HY000 (ER_RPL_ERROR_WRITING_RELAY_LOG_CONFIGURATION)

  Message: Error writing relay log configuration.

  ER_RPL_ERROR_WRITING_RELAY_LOG_CONFIGURATION was added in 8.0.2.

- Error: 10609 SQLSTATE: HY000 (ER_NDB_OOM_GET_NDB_BLOBS_VALUE)

  Message: get_ndb_blobs_value: my_malloc(%u) failed

  ER_NDB_OOM_GET_NDB_BLOBS_VALUE was added in 8.0.2.

- Error: 10610 SQLSTATE: HY000 (ER_NDB_THREAD_TIMED_OUT)

  Message: NDB: Thread id %u timed out (30s) waiting for epoch %u/%u to be handled. Progress : %u/%u -> %u/%u.

  ER_NDB_THREAD_TIMED_OUT was added in 8.0.2.

- Error: 10611 SQLSTATE: HY000 (ER_NDB_TABLE_IS_NOT_DISTRIBUTED)

  Message: NDB: Inconsistency detected in distributed privilege tables. Table '%s.%s' is not distributed

  ER_NDB_TABLE_IS_NOT_DISTRIBUTED was added in 8.0.2.

- Error: 10612 SQLSTATE: HY000 (ER_NDB_CREATING_TABLE)

  Message: NDB: Creating %s.%s

ER_NDB_CREATING_TABLE was added in 8.0.2.

- Error: 10613 SQLSTATE: HY000 (ER_NDB_FLUSHING_TABLE_INFO)

  Message: NDB: Flushing %s.%s

  ER_NDB_FLUSHING_TABLE_INFO was added in 8.0.2.

- Error: 10614 SQLSTATE: HY000 (ER_NDB_CLEANING_STRAY_TABLES)

  Message: NDB: Cleaning stray tables from database '%s'

  ER_NDB_CLEANING_STRAY_TABLES was added in 8.0.2.

- Error: 10615 SQLSTATE: HY000 (ER_NDB_DISCOVERED_MISSING_DB)

  Message: NDB: Discovered missing database '%s'

  ER_NDB_DISCOVERED_MISSING_DB was added in 8.0.2.

- Error: 10616 SQLSTATE: HY000 (ER_NDB_DISCOVERED_REMAINING_DB)

  Message: NDB: Discovered remaining database '%s'

  ER_NDB_DISCOVERED_REMAINING_DB was added in 8.0.2.

- Error: 10617 SQLSTATE: HY000 (ER_NDB_CLUSTER_FIND_ALL_DBS_RETRY)

  Message: NDB: ndbcluster_find_all_databases retry: %u - %s

  ER_NDB_CLUSTER_FIND_ALL_DBS_RETRY was added in 8.0.2.

- Error: 10618 SQLSTATE: HY000 (ER_NDB_CLUSTER_FIND_ALL_DBS_FAIL)

  Message: NDB: ndbcluster_find_all_databases fail: %u - %s

  ER_NDB_CLUSTER_FIND_ALL_DBS_FAIL was added in 8.0.2.

- Error: 10619 SQLSTATE: HY000 (ER_NDB_SKIPPING_SETUP_TABLE)

  Message: NDB: skipping setup table %s.%s, in state %d

  ER_NDB_SKIPPING_SETUP_TABLE was added in 8.0.2.

- Error: 10620 SQLSTATE: HY000 (ER_NDB_FAILED_TO_SET_UP_TABLE)

  Message: NDB: failed to setup table %s.%s, error: %d, %s

  ER_NDB_FAILED_TO_SET_UP_TABLE was added in 8.0.2.

- Error: 10621 SQLSTATE: HY000 (ER_NDB_MISSING_FRM_DISCOVERING)

  Message: NDB Binlog: Skipping drop of locally defined table '%s.%s' from binlog schema event '%s' from node %d.

  ER_NDB_BINLOG_SKIPPING_DROP_OF_LOCAL_TABLE was added in 8.0.2.

- Error: 10646 SQLSTATE: HY000 (ER_NDB_BINLOG_SKIPPING_RENAME_OF_LOCAL_TABLE)

  Message: NDB Binlog: Skipping renaming locally defined table '%s.%s' from binlog schema event '%s' from node %d.

  ER_NDB_BINLOG_SKIPPING_RENAME_OF_LOCAL_TABLE was added in 8.0.2.

- Error: 10647 SQLSTATE: HY000 (ER_NDB_BINLOG_SKIPPING_DROP_OF_DB_CONTAINING_LOCAL_TABLES)

  Message: NDB Binlog: Skipping drop database '%s' since it contained local tables binlog schema event '%s' from node %d.

  ER_NDB_BINLOG_SKIPPING_DROP_OF_DB_CONTAINING_LOCAL_TABLES was added in 8.0.2.

- Error: 10648 SQLSTATE: HY000 (ER_NDB_BINLOG_GOT_DIST_PRIV_EVENT_FLUSHING_PRIVILEGES)

  Message: Got dist_priv event: %s, flushing privileges

  ER_NDB_BINLOG_GOT_DIST_PRIV_EVENT_FLUSHING_PRIVILEGES was added in 8.0.2.

- Error: 10649 SQLSTATE: HY000 (ER_NDB_BINLOG_GOT_SCHEMA_EVENT)

  Message: NDB: got schema event on %s.%s(%u/%u) query: '%s' type: %s(%d) node: %u slock: %x %08x

  ER_NDB_BINLOG_GOT_SCHEMA_EVENT was added in 8.0.2.

- Error: 10650 SQLSTATE: HY000 (ER_NDB_BINLOG_SKIPPING_OLD_SCHEMA_OPERATION)

  Message: NDB schema: Skipping old schema operation(RENAME_TABLE_NEW) on %s.%s

  ER_NDB_BINLOG_SKIPPING_OLD_SCHEMA_OPERATION was added in 8.0.2.

- Error: 10651 SQLSTATE: HY000 (ER_NDB_CLUSTER_FAILURE)

  Message: NDB Schema dist: cluster failure at epoch %u/%u.

  ER_NDB_CLUSTER_FAILURE was added in 8.0.2.

- Error: 10652 SQLSTATE: HY000 (ER_NDB_TABLES_INITIALLY_READ_ONLY_ON_RECONNECT)

  Message: NDB Binlog: ndb tables initially read only on reconnect.

  ER_NDB_TABLES_INITIALLY_READ_ONLY_ON_RECONNECT was added in 8.0.2.

- Error: 10653 SQLSTATE: HY000 (ER_NDB_IGNORING_UNKNOWN_EVENT)

  Message: NDB Schema dist: unknown event %u, ignoring...

  ER_NDB_IGNORING_UNKNOWN_EVENT was added in 8.0.2.

- Error: 10654 SQLSTATE: HY000 (ER_NDB_BINLOG_OPENING_INDEX)

  Message: NDB Binlog: Opening ndb_binlog_index: %d, '%s'

  ER_NDB_BINLOG_OPENING_INDEX was added in 8.0.2.

- Error: 10655 SQLSTATE: HY000 (ER_NDB_BINLOG_CANT_LOCK_NDB_BINLOG_INDEX)

  Message: NDB Binlog: Unable to lock table ndb_binlog_index

  ER_NDB_BINLOG_CANT_LOCK_NDB_BINLOG_INDEX was added in 8.0.2.

- Error: 10656 SQLSTATE: HY000 (ER_NDB_BINLOG_INJECTING_RANDOM_WRITE_FAILURE)

  Message: NDB Binlog: Injecting random write failure

  ER_NDB_BINLOG_INJECTING_RANDOM_WRITE_FAILURE was added in 8.0.2.

- Error: 10657 SQLSTATE: HY000 (ER_NDB_BINLOG_CANT_WRITE_TO_NDB_BINLOG_INDEX)

  Message: NDB Binlog: Failed writing to ndb_binlog_index for epoch %u/%u orig_server_id %u orig_epoch %u/%u with error %d.

  ER_NDB_BINLOG_CANT_WRITE_TO_NDB_BINLOG_INDEX was added in 8.0.2.

- Error: 10658 SQLSTATE: HY000 (ER_NDB_BINLOG_WRITING_TO_NDB_BINLOG_INDEX)

  Message: NDB Binlog: Writing row (%s) to ndb_binlog_index - %s

  ER_NDB_BINLOG_WRITING_TO_NDB_BINLOG_INDEX was added in 8.0.2.

- Error: 10659 SQLSTATE: HY000 (ER_NDB_BINLOG_CANT_COMMIT_TO_NDB_BINLOG_INDEX)

  Message: NDB Binlog: Failed committing transaction to ndb_binlog_index with error %d.

  ER_NDB_BINLOG_CANT_COMMIT_TO_NDB_BINLOG_INDEX was added in 8.0.2.

- Error: 10660 SQLSTATE: HY000 (ER_NDB_BINLOG_WRITE_TO_NDB_BINLOG_INDEX_FAILED_AFTER_KILL)

  Message: NDB Binlog: Failed writing to ndb_binlog_index table while retrying after kill during shutdown

  ER_NDB_BINLOG_WRITE_TO_NDB_BINLOG_INDEX_FAILED_AFTER_KILL was added in 8.0.2.

- Error: 10661 SQLSTATE: HY000 (ER_NDB_BINLOG_USING_SERVER_ID_0_SLAVES_WILL_NOT)

  Message: NDB: server id set to zero - changes logged to bin log with server id zero will be logged with another server id by slave mysqlds

  ER_NDB_BINLOG_USING_SERVER_ID_0_SLAVES_WILL_NOT was added in 8.0.2.

- Error: 10662 SQLSTATE: HY000 (ER_NDB_SERVER_ID_RESERVED_OR_TOO_LARGE)

  Message: NDB: server id provided is too large to be represented in opt_server_id_bits or is reserved

  ER_NDB_SERVER_ID_RESERVED_OR_TOO_LARGE was added in 8.0.2.

- Error: 10663 SQLSTATE: HY000 (ER_NDB_BINLOG_NDB_LOG_TRANSACTION_ID_REQUIRES_V2_ROW_EVENTS)

  Message: NDB: --ndb-log-transaction-id requires v2 Binlog row events but server is using v1.

  ER_NDB_BINLOG_NDB_LOG_TRANSACTION_ID_REQUIRES_V2_ROW_EVENTS was added in 8.0.2.

- Error: 10664 SQLSTATE: HY000 (ER_NDB_BINLOG_NDB_LOG_APPLY_STATUS_FORCING_FULL_USE_WRITE)

  Message: NDB: ndb-log-apply-status forcing %s.%s to FULL USE_WRITE

  ER_NDB_BINLOG_NDB_LOG_APPLY_STATUS_FORCING_FULL_USE_WRITE was added in 8.0.2.

- Error: 10665 SQLSTATE: HY000 (ER_NDB_BINLOG_GENERIC_MESSAGE)

  Message: NDB Binlog: %s

  ER_NDB_BINLOG_GENERIC_MESSAGE was added in 8.0.2.

- Error: 10666 SQLSTATE: HY000 (ER_NDB_CONFLICT_GENERIC_MESSAGE)

  Message: %s

  ER_NDB_CONFLICT_GENERIC_MESSAGE was added in 8.0.2.

- Error: 10667 SQLSTATE: HY000 (ER_NDB_TRANS_DEPENDENCY_TRACKER_ERROR)

  Message: %s

  ER_NDB_TRANS_DEPENDENCY_TRACKER_ERROR was added in 8.0.2.

- Error: 10668 SQLSTATE: HY000 (ER_NDB_CONFLICT_FN_PARSE_ERROR)

  Message: NDB Slave: Table %s.%s : Parse error on conflict fn : %s

  ER_NDB_CONFLICT_FN_PARSE_ERROR was added in 8.0.2.

- Error: 10669 SQLSTATE: HY000 (ER_NDB_CONFLICT_FN_SETUP_ERROR)

  Message: NDB Slave: Table %s.%s : %s

  ER_NDB_CONFLICT_FN_SETUP_ERROR was added in 8.0.2.

- Error: 10670 SQLSTATE: HY000 (ER_NDB_BINLOG_FAILED_TO_GET_TABLE)

  Message: NDB Binlog: Failed to get table %s from ndb: %s, %d

  ER_NDB_BINLOG_FAILED_TO_GET_TABLE was added in 8.0.2.

- Error: 10671 SQLSTATE: HY000 (ER_NDB_BINLOG_NOT_LOGGING)

  Message: NDB Binlog: NOT logging %s

  ER_NDB_BINLOG_NOT_LOGGING was added in 8.0.2.

- Error: 10672 SQLSTATE: HY000 (ER_NDB_BINLOG_CREATE_TABLE_EVENT_FAILED)

  Message: NDB Binlog: FAILED CREATE (DISCOVER) TABLE Event: %s

  ER_NDB_BINLOG_CREATE_TABLE_EVENT_FAILED was added in 8.0.2.

- Error: 10673 SQLSTATE: HY000 (ER_NDB_BINLOG_CREATE_TABLE_EVENT_INFO)

Message: NDB Binlog: CREATE (DISCOVER) TABLE Event: %s

ER_NDB_BINLOG_CREATE_TABLE_EVENT_INFO was added in 8.0.2.

- Error: 10674 SQLSTATE: HY000 (ER_NDB_BINLOG_DISCOVER_TABLE_EVENT_INFO)

  Message: NDB Binlog: DISCOVER TABLE Event: %s

  ER_NDB_BINLOG_DISCOVER_TABLE_EVENT_INFO was added in 8.0.2.

- Error: 10675 SQLSTATE: HY000 (ER_NDB_BINLOG_BLOB_REQUIRES_PK)

  ER_NDB_BINLOG_BLOB_REQUIRES_PK was added in 8.0.2.

- Error: 10676 SQLSTATE: HY000 (ER_NDB_BINLOG_CANT_CREATE_EVENT_IN_DB)

  Message: NDB Binlog: Unable to create event in database. Event: %s Error Code: %d Message: %s

  ER_NDB_BINLOG_CANT_CREATE_EVENT_IN_DB was added in 8.0.2.

- Error: 10677 SQLSTATE: HY000 (ER_NDB_BINLOG_CANT_CREATE_EVENT_IN_DB_AND_CANT_DROP)

  Message: NDB Binlog: Unable to create event in database. Attempt to correct with drop failed. Event: %s Error Code: %d Message: %s

  ER_NDB_BINLOG_CANT_CREATE_EVENT_IN_DB_AND_CANT_DROP was added in 8.0.2.

- Error: 10678 SQLSTATE: HY000 (ER_NDB_BINLOG_CANT_CREATE_EVENT_IN_DB_DROPPED)

  Message: NDB Binlog: Unable to create event in database. Attempt to correct with drop ok, but create failed. Event: %s Error Code: %d Message: %s

  ER_NDB_BINLOG_CANT_CREATE_EVENT_IN_DB_DROPPED was added in 8.0.2.

- Error: 10679 SQLSTATE: HY000 (ER_NDB_BINLOG_DISCOVER_REUSING_OLD_EVENT_OPS)

  Message: NDB Binlog: discover reusing old ev op

  ER_NDB_BINLOG_DISCOVER_REUSING_OLD_EVENT_OPS was added in 8.0.2.

- Error: 10680 SQLSTATE: HY000 (ER_NDB_BINLOG_CREATING_NDBEVENTOPERATION_FAILED)

  Message: NDB Binlog: Creating NdbEventOperation failed for %s

  ER_NDB_BINLOG_CREATING_NDBEVENTOPERATION_FAILED was added in 8.0.2.

- Error: 10681 SQLSTATE: HY000 (ER_NDB_BINLOG_CANT_CREATE_BLOB)

  Message: NDB Binlog: Creating NdbEventOperation blob field %u handles failed (code=%d) for %s

  ER_NDB_BINLOG_CANT_CREATE_BLOB was added in 8.0.2.

- Error: 10682 SQLSTATE: HY000 (ER_NDB_BINLOG_NDBEVENT_EXECUTE_FAILED)

  Message: NDB Binlog: ndbevent->execute failed for %s; %d %s

  ER_NDB_BINLOG_NDBEVENT_EXECUTE_FAILED was added in 8.0.2.

- Error: 10683 SQLSTATE: HY000 (ER_NDB_CREATE_EVENT_OPS_LOGGING_INFO)

Message: NDB Binlog: logging %s (%s,%s)

ER_NDB_CREATE_EVENT_OPS_LOGGING_INFO was added in 8.0.2.

- Error: 10684 SQLSTATE: HY000 (ER_NDB_BINLOG_CANT_DROP_EVENT_FROM_DB)

  Message: NDB Binlog: Unable to drop event in database. Event: %s Error Code: %d Message: %s

  ER_NDB_BINLOG_CANT_DROP_EVENT_FROM_DB was added in 8.0.2.

- Error: 10685 SQLSTATE: HY000 (ER_NDB_TIMED_OUT_IN_DROP_TABLE)

  Message: NDB %s: %s timed out. Ignoring...

  ER_NDB_TIMED_OUT_IN_DROP_TABLE was added in 8.0.2.

- Error: 10686 SQLSTATE: HY000 (ER_NDB_BINLOG_UNHANDLED_ERROR_FOR_TABLE)

  Message: NDB Binlog: unhandled error %d for table %s

  ER_NDB_BINLOG_UNHANDLED_ERROR_FOR_TABLE was added in 8.0.2.

- Error: 10687 SQLSTATE: HY000 (ER_NDB_BINLOG_CLUSTER_FAILURE)

  Message: NDB Binlog: cluster failure for %s at epoch %u/%u.

  ER_NDB_BINLOG_CLUSTER_FAILURE was added in 8.0.2.

- Error: 10688 SQLSTATE: HY000 (ER_NDB_BINLOG_UNKNOWN_NON_DATA_EVENT)

  Message: NDB Binlog: unknown non data event %d for %s. Ignoring...

  ER_NDB_BINLOG_UNKNOWN_NON_DATA_EVENT was added in 8.0.2.

- Error: 10689 SQLSTATE: HY000 (ER_NDB_BINLOG_INJECTOR_DISCARDING_ROW_EVENT_METADATA)

  Message: NDB: Binlog Injector discarding row event meta data as server is using v1 row events. (%u %x)

  ER_NDB_BINLOG_INJECTOR_DISCARDING_ROW_EVENT_METADATA was added in 8.0.2.

- Error: 10690 SQLSTATE: HY000 (ER_NDB_REMAINING_OPEN_TABLES)

  Message: remove_all_event_operations: Remaining open tables:

  ER_NDB_REMAINING_OPEN_TABLES was added in 8.0.2.

- Error: 10691 SQLSTATE: HY000 (ER_NDB_REMAINING_OPEN_TABLE_INFO)

  Message: %s.%s, use_count: %u

  ER_NDB_REMAINING_OPEN_TABLE_INFO was added in 8.0.2.

- Error: 10692 SQLSTATE: HY000 (ER_NDB_COULD_NOT_GET_APPLY_STATUS_SHARE)

  Message: NDB: Could not get apply status share

  ER_NDB_COULD_NOT_GET_APPLY_STATUS_SHARE was added in 8.0.2.

- Error: 10693 SQLSTATE: HY000 (ER_NDB_BINLOG_SERVER_SHUTDOWN_DURING_NDB_CLUSTER_START)

Message: NDB Binlog: Server shutdown detected while waiting for ndbcluster to start...

ER_NDB_BINLOG_SERVER_SHUTDOWN_DURING_NDB_CLUSTER_START was added in 8.0.2.

- Error: 10694 SQLSTATE: HY000 (ER_NDB_BINLOG_CLUSTER_RESTARTED_RESET_MASTER_SUGGESTED)

  Message: NDB Binlog: cluster has been restarted --initial or with older filesystem. ndb_latest_handled_binlog_epoch: %u/%u, while current epoch: %u/%u. RESET MASTER should be issued. Resetting ndb_latest_handled_binlog_epoch.

  ER_NDB_BINLOG_CLUSTER_RESTARTED_RESET_MASTER_SUGGESTED was added in 8.0.2.

- Error: 10695 SQLSTATE: HY000 (ER_NDB_BINLOG_CLUSTER_HAS_RECONNECTED)

  Message: NDB Binlog: cluster has reconnected. Changes to the database that occurred while disconnected will not be in the binlog

  ER_NDB_BINLOG_CLUSTER_HAS_RECONNECTED was added in 8.0.2.

- Error: 10696 SQLSTATE: HY000 (ER_NDB_BINLOG_STARTING_LOG_AT_EPOCH)

  Message: NDB Binlog: starting log at epoch %u/%u

  ER_NDB_BINLOG_STARTING_LOG_AT_EPOCH was added in 8.0.2.

- Error: 10697 SQLSTATE: HY000 (ER_NDB_BINLOG_NDB_TABLES_WRITABLE)

  Message: NDB Binlog: ndb tables writable

  ER_NDB_BINLOG_NDB_TABLES_WRITABLE was added in 8.0.2.

- Error: 10698 SQLSTATE: HY000 (ER_NDB_BINLOG_SHUTDOWN_DETECTED)

  Message: NDB Binlog: Server shutdown detected...

  ER_NDB_BINLOG_SHUTDOWN_DETECTED was added in 8.0.2.

- Error: 10699 SQLSTATE: HY000 (ER_NDB_BINLOG_LOST_SCHEMA_CONNECTION_WAITING)

  ER_PLUGIN_REGISTRATION_FAILED was added in 8.0.2.

- Error: 10735 SQLSTATE: HY000 (ER_PLUGIN_CANT_OPEN_PLUGIN_TABLE)

  Message: Can't open the mysql.plugin table. Please run mysql_upgrade to create it.

  ER_PLUGIN_CANT_OPEN_PLUGIN_TABLE was added in 8.0.2.

- Error: 10736 SQLSTATE: HY000 (ER_PLUGIN_CANT_LOAD)

  Message: Couldn't load plugin named '%s' with soname '%s'.

  ER_PLUGIN_CANT_LOAD was added in 8.0.2.

- Error: 10737 SQLSTATE: HY000 (ER_PLUGIN_LOAD_PARAMETER_TOO_LONG)

  Message: plugin-load parameter too long

  ER_PLUGIN_LOAD_PARAMETER_TOO_LONG was added in 8.0.2.

- Error: 10738 SQLSTATE: HY000 (ER_PLUGIN_FORCING_SHUTDOWN)

  Message: Plugin '%s' will be forced to shutdown

  ER_PLUGIN_FORCING_SHUTDOWN was added in 8.0.2.

- Error: 10739 SQLSTATE: HY000 (ER_PLUGIN_HAS_NONZERO_REFCOUNT_AFTER_SHUTDOWN)

  Message: Plugin '%s' has ref_count=%d after shutdown.

  ER_PLUGIN_HAS_NONZERO_REFCOUNT_AFTER_SHUTDOWN was added in 8.0.2.

- Error: 10740 SQLSTATE: HY000 (ER_PLUGIN_UNKNOWN_VARIABLE_TYPE)

  Message: Unknown variable type code 0x%x in plugin '%s'.

  ER_PLUGIN_UNKNOWN_VARIABLE_TYPE was added in 8.0.2.

- Error: 10741 SQLSTATE: HY000 (ER_PLUGIN_VARIABLE_SET_READ_ONLY)

  Message: Server variable %s of plugin %s was forced to be read-only: string variable without update_func and PLUGIN_VAR_MEMALLOC flag

  ER_PLUGIN_VARIABLE_SET_READ_ONLY was added in 8.0.2.

- Error: 10742 SQLSTATE: HY000 (ER_PLUGIN_VARIABLE_MISSING_NAME)

  Message: Missing variable name in plugin '%s'.

  ER_PLUGIN_VARIABLE_MISSING_NAME was added in 8.0.2.

- Error: 10743 SQLSTATE: HY000 (ER_PLUGIN_VARIABLE_NOT_ALLOCATED_THREAD_LOCAL)

  Message: Thread local variable '%s' not allocated in plugin '%s'.

  ER_PLUGIN_VARIABLE_NOT_ALLOCATED_THREAD_LOCAL was added in 8.0.2.

- Error: 10744 SQLSTATE: HY000 (ER_PLUGIN_OOM)

  Message: Out of memory for plugin '%s'.

ER_PLUGIN_OOM was added in 8.0.2.

- Error: 10745 SQLSTATE: HY000 (ER_PLUGIN_BAD_OPTIONS)

  Message: Bad options for plugin '%s'.

  ER_PLUGIN_BAD_OPTIONS was added in 8.0.2.

- Error: 10746 SQLSTATE: HY000 (ER_PLUGIN_PARSING_OPTIONS_FAILED)

  Message: Parsing options for plugin '%s' failed.

  ER_PLUGIN_PARSING_OPTIONS_FAILED was added in 8.0.2.

- Error: 10747 SQLSTATE: HY000 (ER_PLUGIN_DISABLED)

  Message: Plugin '%s' is disabled.

  ER_PLUGIN_DISABLED was added in 8.0.2.

- Error: 10748 SQLSTATE: HY000 (ER_PLUGIN_HAS_CONFLICTING_SYSTEM_VARIABLES)

  Message: Plugin '%s' has conflicting system variables

  ER_PLUGIN_HAS_CONFLICTING_SYSTEM_VARIABLES was added in 8.0.2.

- Error: 10749 SQLSTATE: HY000 (ER_PLUGIN_CANT_SET_PERSISTENT_OPTIONS)

  Message: Setting persistent options for plugin '%s' failed.

  ER_PLUGIN_CANT_SET_PERSISTENT_OPTIONS was added in 8.0.2.

- Error: 10750 SQLSTATE: HY000 (ER_MY_NET_WRITE_FAILED_FALLING_BACK_ON_STDERR)

  Message: Failed on my_net_write, writing to stderr instead: %s

  ER_MY_NET_WRITE_FAILED_FALLING_BACK_ON_STDERR was added in 8.0.2.

- Error: 10751 SQLSTATE: HY000 (ER_RETRYING_REPAIR_WITHOUT_QUICK)

  Message: Retrying repair of: '%s' without quick

  ER_RETRYING_REPAIR_WITHOUT_QUICK was added in 8.0.2.

- Error: 10752 SQLSTATE: HY000 (ER_RETRYING_REPAIR_WITH_KEYCACHE)

  Message: Retrying repair of: '%s' with keycache

  ER_RETRYING_REPAIR_WITH_KEYCACHE was added in 8.0.2.

- Error: 10753 SQLSTATE: HY000 (ER_FOUND_ROWS_WHILE_REPAIRING)

  Message: Found %s of %s rows when repairing '%s'

  ER_FOUND_ROWS_WHILE_REPAIRING was added in 8.0.2.

- Error: 10754 SQLSTATE: HY000 (ER_ERROR_DURING_OPTIMIZE_TABLE)

  Message: Warning: Optimize table got errno %d on %s.%s, retrying

  ER_ERROR_DURING_OPTIMIZE_TABLE was added in 8.0.2.

- Error: 10755 SQLSTATE: HY000 (ER_ERROR_ENABLING_KEYS)

Message: Warning: Enabling keys got errno %d on %s.%s, retrying

ER_ERROR_ENABLING_KEYS was added in 8.0.2.

- Error: 10756 SQLSTATE: HY000 (ER_CHECKING_TABLE)

  Message: Checking table: '%s'

  ER_CHECKING_TABLE was added in 8.0.2.

- Error: 10757 SQLSTATE: HY000 (ER_RECOVERING_TABLE)

  Message: Recovering table: '%s'

  ER_RECOVERING_TABLE was added in 8.0.2.

- Error: 10758 SQLSTATE: HY000 (ER_CANT_CREATE_TABLE_SHARE_FROM_FRM)

  Message: Error in creating TABLE_SHARE from %s.frm file.

  ER_CANT_CREATE_TABLE_SHARE_FROM_FRM was added in 8.0.2.

- Error: 10759 SQLSTATE: HY000 (ER_CANT_LOCK_TABLE)

  Message: Unable to acquire lock on %s.%s

  ER_CANT_LOCK_TABLE was added in 8.0.2.

- Error: 10760 SQLSTATE: HY000 (ER_CANT_ALLOC_TABLE_OBJECT)

  Message: Error in allocation memory for TABLE object.

  ER_CANT_ALLOC_TABLE_OBJECT was added in 8.0.2.

- Error: 10761 SQLSTATE: HY000 (ER_CANT_CREATE_HANDLER_OBJECT_FOR_TABLE)

  Message: Error in creating handler object for table %s.%s

  ER_CANT_CREATE_HANDLER_OBJECT_FOR_TABLE was added in 8.0.2.

- Error: 10762 SQLSTATE: HY000 (ER_CANT_SET_HANDLER_REFERENCE_FOR_TABLE)

  Message: Error in setting handler reference for table %s.%s

  ER_CANT_SET_HANDLER_REFERENCE_FOR_TABLE was added in 8.0.2.

- Error: 10763 SQLSTATE: HY000 (ER_CANT_LOCK_TABLESPACE)

  Message: Unable to acquire lock on tablespace name %s

  ER_CANT_LOCK_TABLESPACE was added in 8.0.2.

- Error: 10764 SQLSTATE: HY000 (ER_CANT_UPGRADE_GENERATED_COLUMNS_TO_DD)

  Message: Error in processing generated columns for table %s.%s

  ER_CANT_UPGRADE_GENERATED_COLUMNS_TO_DD was added in 8.0.2.

- Error: 10765 SQLSTATE: HY000 (ER_DD_ERROR_CREATING_ENTRY)

  Message: Error in Creating DD entry for %s.%s

  ER_DD_ERROR_CREATING_ENTRY was added in 8.0.2.

- Error: 10766 SQLSTATE: HY000 (ER_DD_CANT_FETCH_TABLE_DATA)

  Message: Error in fetching %s.%s table data from dictionary

  ER_DD_CANT_FETCH_TABLE_DATA was added in 8.0.2.
- Error: 10767 SQLSTATE: HY000 (ER_DD_CANT_FIX_SE_DATA)

  Message: Error in fixing SE data for %s.%s

  ER_DD_CANT_FIX_SE_DATA was added in 8.0.2.
- Error: 10768 SQLSTATE: HY000 (ER_DD_CANT_CREATE_SP)

  Message: Error in creating stored program '%s.%s'

  ER_DD_CANT_CREATE_SP was added in 8.0.2.
- Error: 10769 SQLSTATE: HY000 (ER_CANT_OPEN_DB_OPT_USING_DEFAULT_CHARSET)

  Message: Unable to open db.opt file %s. Using default Character set.

  ER_CANT_OPEN_DB_OPT_USING_DEFAULT_CHARSET was added in 8.0.2.
- Error: 10770 SQLSTATE: HY000 (ER_CANT_CREATE_CACHE_FOR_DB_OPT)

  Message: Unable to intialize IO cache to open db.opt file %s.

  ER_CANT_CREATE_CACHE_FOR_DB_OPT was added in 8.0.2.
- Error: 10771 SQLSTATE: HY000 (ER_CANT_IDENTIFY_CHARSET_USING_DEFAULT)

  Message: Unable to identify the charset in %s. Using default character set.

  ER_CANT_IDENTIFY_CHARSET_USING_DEFAULT was added in 8.0.2.
- Error: 10772 SQLSTATE: HY000 (ER_DB_OPT_NOT_FOUND_USING_DEFAULT_CHARSET)

  Message: db.opt file not found for %s database. Using default Character set.

  ER_DB_OPT_NOT_FOUND_USING_DEFAULT_CHARSET was added in 8.0.2.
- Error: 10773 SQLSTATE: HY000 (ER_EVENT_CANT_GET_TIMEZONE_FROM_FIELD)

  Message: Event '%s'.'%s': invalid value in column mysql.event.time_zone.

  ER_EVENT_CANT_GET_TIMEZONE_FROM_FIELD was added in 8.0.2.
- Error: 10774 SQLSTATE: HY000 (ER_EVENT_CANT_FIND_TIMEZONE)

  Message: Event '%s'.'%s': has invalid time zone value

  ER_EVENT_CANT_FIND_TIMEZONE was added in 8.0.2.
- Error: 10775 SQLSTATE: HY000 (ER_EVENT_CANT_GET_CHARSET)

  Message: Event '%s'.'%s': invalid value in column mysql.event.character_set_client.

  ER_EVENT_CANT_GET_CHARSET was added in 8.0.2.
- Error: 10776 SQLSTATE: HY000 (ER_EVENT_CANT_GET_COLLATION)

  Message: Event '%s'.'%s': invalid value in column mysql.event.collation_connection.

  ER_EVENT_CANT_GET_COLLATION was added in 8.0.2.

- Error: 10777 SQLSTATE: HY000 (ER_EVENT_CANT_OPEN_TABLE_MYSQL_EVENT)

  Message: Failed to open mysql.event Table.

  ER_EVENT_CANT_OPEN_TABLE_MYSQL_EVENT was added in 8.0.2.

- Error: 10778 SQLSTATE: HY000 (ER_CANT_PARSE_STORED_ROUTINE_BODY)

  Message: Parsing '%s.%s' routine body failed. Creating routine without parsing routine body

  ER_CANT_PARSE_STORED_ROUTINE_BODY was added in 8.0.2.

- Error: 10779 SQLSTATE: HY000 (ER_CANT_OPEN_TABLE_MYSQL_PROC)

  Message: Failed to open mysql.proc Table.

  ER_CANT_OPEN_TABLE_MYSQL_PROC was added in 8.0.2.

- Error: 10780 SQLSTATE: HY000 (ER_CANT_READ_TABLE_MYSQL_PROC)

  Message: Failed to read mysql.proc table.

  ER_CANT_READ_TABLE_MYSQL_PROC was added in 8.0.2.

- Error: 10781 SQLSTATE: HY000 (ER_FILE_EXISTS_DURING_UPGRADE)

  Message: Found %s file in mysql schema. DD will create .ibd file with same name. Please rename table and start upgrade process again.

  ER_FILE_EXISTS_DURING_UPGRADE was added in 8.0.2.

- Error: 10782 SQLSTATE: HY000 (ER_CANT_OPEN_DATADIR_AFTER_UPGRADE_FAILURE)

  Message: Unable to open the data directory %s during clean up after upgrade failed

  ER_CANT_OPEN_DATADIR_AFTER_UPGRADE_FAILURE was added in 8.0.2.

- Error: 10783 SQLSTATE: HY000 (ER_CANT_SET_PATH_FOR)

  Message: Failed to set path %s

  ER_CANT_SET_PATH_FOR was added in 8.0.2.

- Error: 10784 SQLSTATE: HY000 (ER_CANT_OPEN_DIR)

  Message: Failed to open dir %s

  ER_CANT_OPEN_DIR was added in 8.0.2.

- Error: 10785 SQLSTATE: HY000 (ER_NDB_EMPTY_NODEID_IN_NDB_CLUSTER_CONNECTION_POOL_NODEIDS)

  Message: NDB: Found empty nodeid specified in --ndb-cluster-connection-pool-nodeids='%s'.

  ER_NDB_EMPTY_NODEID_IN_NDB_CLUSTER_CONNECTION_POOL_NODEIDS was added in 8.0.2.

- Error: 10786 SQLSTATE: HY000 (ER_NDB_CANT_PARSE_NDB_CLUSTER_CONNECTION_POOL_NODEIDS)

  Message: NDB: Could not parse '%s' in --ndb-cluster-connection-pool-nodeids='%s'.

  ER_NDB_CANT_PARSE_NDB_CLUSTER_CONNECTION_POOL_NODEIDS was added in 8.0.2.

- Error: 10787 SQLSTATE: HY000 (ER_NDB_INVALID_NODEID_IN_NDB_CLUSTER_CONNECTION_POOL_NODEIDS)

  Message: NDB: Invalid nodeid %d in --ndb-cluster-connection-pool-nodeids='%s'.

  ER_NDB_INVALID_NODEID_IN_NDB_CLUSTER_CONNECTION_POOL_NODEIDS was added in 8.0.2.

- Error: 10788 SQLSTATE: HY000 (ER_NDB_DUPLICATE_NODEID_IN_NDB_CLUSTER_CONNECTION_POOL_NODEIDS)

  Message: NDB: Found duplicate nodeid %d in --ndb-cluster-connection-pool-nodeids='%s'.

  ER_NDB_DUPLICATE_NODEID_IN_NDB_CLUSTER_CONNECTION_POOL_NODEIDS was added in 8.0.2.

- Error: 10789 SQLSTATE: HY000 (ER_NDB_POOL_SIZE_MUST_MATCH_NDB_CLUSTER_CONNECTION_POOL_NODEIDS)

  Message: NDB: The size of the cluster connection pool must be equal to the number of nodeids in --ndb-cluster-connection-pool-nodeids='%s'.

  ER_NDB_POOL_SIZE_MUST_MATCH_NDB_CLUSTER_CONNECTION_POOL_NODEIDS was added in 8.0.2.

- Error: 10790 SQLSTATE: HY000 (ER_NDB_NODEID_NOT_FIRST_IN_NDB_CLUSTER_CONNECTION_POOL_NODEIDS)

  Message: NDB: The nodeid specified by --ndb-nodeid must be equal to the first nodeid in --ndb-cluster-connection-pool-nodeids='%s'.

  ER_NDB_NODEID_NOT_FIRST_IN_NDB_CLUSTER_CONNECTION_POOL_NODEIDS was added in 8.0.2.

- Error: 10791 SQLSTATE: HY000 (ER_NDB_USING_NODEID)

  Message: NDB: using nodeid %u

  ER_NDB_USING_NODEID was added in 8.0.2.

- Error: 10792 SQLSTATE: HY000 (ER_NDB_CANT_ALLOC_GLOBAL_NDB_CLUSTER_CONNECTION)

  Message: NDB: failed to allocate global ndb cluster connection

  ER_NDB_CANT_ALLOC_GLOBAL_NDB_CLUSTER_CONNECTION was added in 8.0.2.

- Error: 10793 SQLSTATE: HY000 (ER_NDB_CANT_ALLOC_GLOBAL_NDB_OBJECT)

  Message: NDB: failed to allocate global ndb object

  ER_NDB_CANT_ALLOC_GLOBAL_NDB_OBJECT was added in 8.0.2.

- Error: 10794 SQLSTATE: HY000 (ER_NDB_USING_NODEID_LIST)

  Message: NDB[%u]: using nodeid %u

  ER_NDB_USING_NODEID_LIST was added in 8.0.2.

- Error: 10795 SQLSTATE: HY000 (ER_NDB_CANT_ALLOC_NDB_CLUSTER_CONNECTION)

  Message: NDB[%u]: failed to allocate cluster connect object

  ER_NDB_CANT_ALLOC_NDB_CLUSTER_CONNECTION was added in 8.0.2.

- Error: 10796 SQLSTATE: HY000 (ER_NDB_STARTING_CONNECT_THREAD)

  Message: NDB[%u]: starting connect thread

  ER_NDB_STARTING_CONNECT_THREAD was added in 8.0.2.

- Error: 10797 SQLSTATE: HY000 (ER_NDB_NODE_INFO)

  Message: NDB[%u]: NodeID: %d, %s

  ER_NDB_NODE_INFO was added in 8.0.2.

- Error: 10798 SQLSTATE: HY000 (ER_NDB_CANT_START_CONNECT_THREAD)

  Message: NDB[%u]: failed to start connect thread

  ER_NDB_CANT_START_CONNECT_THREAD was added in 8.0.2.

- Error: 10799 SQLSTATE: HY000 (ER_NDB_GENERIC_ERROR)

  Message: NDB: error (%u) %s

  ER_NDB_GENERIC_ERROR was added in 8.0.2.

- Error: 10800 SQLSTATE: HY000 (ER_NDB_CPU_MASK_TOO_SHORT)

  Message: Ignored receive thread CPU mask, mask too short, %u CPUs needed in mask, only %u CPUs provided

  ER_NDB_CPU_MASK_TOO_SHORT was added in 8.0.2.

- Error: 10801 SQLSTATE: HY000 (ER_EVENT_ERROR_CREATING_QUERY_TO_WRITE_TO_BINLOG)

  Message: Event Error: An error occurred while creating query string, before writing it into binary log.

  ER_EVENT_ERROR_CREATING_QUERY_TO_WRITE_TO_BINLOG was added in 8.0.2.

- Error: 10802 SQLSTATE: HY000 (ER_EVENT_SCHEDULER_ERROR_LOADING_FROM_DB)

  Message: Event Scheduler: Error while loading from disk.

  ER_EVENT_SCHEDULER_ERROR_LOADING_FROM_DB was added in 8.0.2.

- Error: 10803 SQLSTATE: HY000 (ER_EVENT_SCHEDULER_ERROR_GETTING_EVENT_OBJECT)

  Message: Event Scheduler: Error getting event object.

  ER_EVENT_SCHEDULER_ERROR_GETTING_EVENT_OBJECT was added in 8.0.2.

- Error: 10804 SQLSTATE: HY000 (ER_EVENT_SCHEDULER_GOT_BAD_DATA_FROM_TABLE)

  Message: Event Scheduler: Error while loading events from mysql.events.The table probably contains bad data or is corrupted

  ER_EVENT_SCHEDULER_GOT_BAD_DATA_FROM_TABLE was added in 8.0.2.

- Error: 10805 SQLSTATE: HY000 (ER_EVENT_CANT_GET_LOCK_FOR_DROPPING_EVENT)

  Message: Unable to obtain lock for dropping event %s from schema %s

  ER_EVENT_CANT_GET_LOCK_FOR_DROPPING_EVENT was added in 8.0.2.

- Error: 10806 SQLSTATE: HY000 (ER_EVENT_UNABLE_TO_DROP_EVENT)

Message: Unable to drop event %s from schema %s

`ER_EVENT_UNABLE_TO_DROP_EVENT` was added in 8.0.2.

- Error: `10807` SQLSTATE: `HY000` (`ER_BINLOG_ATTACHING_THREAD_MEMORY_FINALLY_AVAILABLE`)

  Message: Server overcomes the temporary 'out of memory' in '%d' tries while attaching to session thread during the group commit phase.

  `ER_BINLOG_ATTACHING_THREAD_MEMORY_FINALLY_AVAILABLE` was added in 8.0.2.

- Error: `10808` SQLSTATE: `HY000` (`ER_BINLOG_CANT_RESIZE_CACHE`)

  Message: Unable to resize binlog IOCACHE auxiliary file

  `ER_BINLOG_CANT_RESIZE_CACHE` was added in 8.0.2.

- Error: `10809` SQLSTATE: `HY000` (`ER_BINLOG_FILE_BEING_READ_NOT_PURGED`)

  Message: file %s was not purged because it was being read by thread number %u

  `ER_BINLOG_FILE_BEING_READ_NOT_PURGED` was added in 8.0.2.

- Error: `10810` SQLSTATE: `HY000` (`ER_BINLOG_IO_ERROR_READING_HEADER`)

  Message: I/O error reading the header from the binary log, errno=%d, io cache code=%d

  `ER_BINLOG_IO_ERROR_READING_HEADER` was added in 8.0.2.

- Error: `10811` SQLSTATE: `HY000` (`ER_BINLOG_CANT_OPEN_LOG`)

  Message: Failed to open log (file '%s', errno %d)

  `ER_BINLOG_CANT_OPEN_LOG` was added in 8.0.2, removed after 8.0.12.

- Error: `10812` SQLSTATE: `HY000` (`ER_BINLOG_CANT_CREATE_CACHE_FOR_LOG`)

  Message: Failed to create a cache on log (file '%s')

  `ER_BINLOG_CANT_CREATE_CACHE_FOR_LOG` was added in 8.0.2, removed after 8.0.12.

- Error: `10813` SQLSTATE: `HY000` (`ER_BINLOG_FILE_EXTENSION_NUMBER_EXHAUSTED`)

  Message: Log filename extension number exhausted: %06lu. Please fix this by archiving old logs and updating the index files.

  `ER_BINLOG_FILE_EXTENSION_NUMBER_EXHAUSTED` was added in 8.0.2.

- Error: `10814` SQLSTATE: `HY000` (`ER_BINLOG_FILE_NAME_TOO_LONG`)

  Message: Log filename too large: %s%s (%zu). Please fix this by archiving old logs and updating the index files.

  `ER_BINLOG_FILE_NAME_TOO_LONG` was added in 8.0.2.

- Error: `10815` SQLSTATE: `HY000` (`ER_BINLOG_FILE_EXTENSION_NUMBER_RUNNING_LOW`)

  Message: Next log extension: %lu. Remaining log filename extensions: %lu. Please consider archiving some logs.

  `ER_BINLOG_FILE_EXTENSION_NUMBER_RUNNING_LOW` was added in 8.0.2.

- Error: 10816 SQLSTATE: HY000 (ER_BINLOG_CANT_OPEN_FOR_LOGGING)

  Message: Could not open %s for logging (error %d). Turning logging off for the whole duration of the MySQL server process. To turn it on again: fix the cause, shutdown the MySQL server and restart it.

  ER_BINLOG_CANT_OPEN_FOR_LOGGING was added in 8.0.2.

- Error: 10817 SQLSTATE: HY000 (ER_BINLOG_FAILED_TO_SYNC_INDEX_FILE)

  Message: MYSQL_BIN_LOG::open_index_file failed to sync the index file.

  ER_BINLOG_FAILED_TO_SYNC_INDEX_FILE was added in 8.0.2.

- Error: 10818 SQLSTATE: HY000 (ER_BINLOG_ERROR_READING_GTIDS_FROM_RELAY_LOG)

  Message: Error reading GTIDs from relaylog: %d

  ER_BINLOG_ERROR_READING_GTIDS_FROM_RELAY_LOG was added in 8.0.2.

- Error: 10819 SQLSTATE: HY000 (ER_BINLOG_EVENTS_READ_FROM_RELAY_LOG_INFO)

  Message: %lu events read in relaylog file '%s' for updating Retrieved_Gtid_Set and/or IO thread transaction parser state.

  ER_BINLOG_EVENTS_READ_FROM_RELAY_LOG_INFO was added in 8.0.2.

- Error: 10820 SQLSTATE: HY000 (ER_BINLOG_ERROR_READING_GTIDS_FROM_BINARY_LOG)

  Message: Error reading GTIDs from binary log: %d

  ER_BINLOG_ERROR_READING_GTIDS_FROM_BINARY_LOG was added in 8.0.2.

- Error: 10821 SQLSTATE: HY000 (ER_BINLOG_EVENTS_READ_FROM_BINLOG_INFO)

  Message: Read %lu events from binary log file '%s' to determine the GTIDs purged from binary logs.

  ER_BINLOG_EVENTS_READ_FROM_BINLOG_INFO was added in 8.0.2.

- Error: 10822 SQLSTATE: HY000 (ER_BINLOG_CANT_GENERATE_NEW_FILE_NAME)

  Message: MYSQL_BIN_LOG::open failed to generate new file name.

  ER_BINLOG_CANT_GENERATE_NEW_FILE_NAME was added in 8.0.2.

- Error: 10823 SQLSTATE: HY000 (ER_BINLOG_FAILED_TO_SYNC_INDEX_FILE_IN_OPEN)

  Message: MYSQL_BIN_LOG::open failed to sync the index file.

  ER_BINLOG_FAILED_TO_SYNC_INDEX_FILE_IN_OPEN was added in 8.0.2.

- Error: 10824 SQLSTATE: HY000 (ER_BINLOG_CANT_USE_FOR_LOGGING)

  Message: Could not use %s for logging (error %d). Turning logging off for the whole duration of the MySQL server process. To turn it on again: fix the cause, shutdown the MySQL server and restart it.

  ER_BINLOG_CANT_USE_FOR_LOGGING was added in 8.0.2.

- Error: 10825 SQLSTATE: HY000 (ER_BINLOG_FAILED_TO_CLOSE_INDEX_FILE_WHILE_REBUILDING)

  Message: While rebuilding index file %s: Failed to close the index file.

  ER_BINLOG_FAILED_TO_CLOSE_INDEX_FILE_WHILE_REBUILDING was added in 8.0.2.

- Error: 10826 SQLSTATE: HY000 (ER_BINLOG_FAILED_TO_DELETE_INDEX_FILE_WHILE_REBUILDING)

  Message: While rebuilding index file %s: Failed to delete the existing index file. It could be that file is being used by some other process.

  ER_BINLOG_FAILED_TO_DELETE_INDEX_FILE_WHILE_REBUILDING was added in 8.0.2.

- Error: 10827 SQLSTATE: HY000 (ER_BINLOG_FAILED_TO_RENAME_INDEX_FILE_WHILE_REBUILDING)

  Message: While rebuilding index file %s: Failed to rename the new index file to the existing index file.

  ER_BINLOG_FAILED_TO_RENAME_INDEX_FILE_WHILE_REBUILDING was added in 8.0.2.

- Error: 10828 SQLSTATE: HY000 (ER_BINLOG_FAILED_TO_OPEN_INDEX_FILE_AFTER_REBUILDING)

  Message: After rebuilding the index file %s: Failed to open the index file.

  ER_BINLOG_FAILED_TO_OPEN_INDEX_FILE_AFTER_REBUILDING was added in 8.0.2.

- Error: 10829 SQLSTATE: HY000 (ER_BINLOG_CANT_APPEND_LOG_TO_TMP_INDEX)

  Message: MYSQL_BIN_LOG::add_log_to_index failed to append log file name: %s, to crash safe index file.

  ER_BINLOG_CANT_APPEND_LOG_TO_TMP_INDEX was added in 8.0.2.

- Error: 10830 SQLSTATE: HY000 (ER_BINLOG_CANT_LOCATE_OLD_BINLOG_OR_RELAY_LOG_FILES)

  Message: Failed to locate old binlog or relay log files

  ER_BINLOG_CANT_LOCATE_OLD_BINLOG_OR_RELAY_LOG_FILES was added in 8.0.2.

- Error: 10831 SQLSTATE: HY000 (ER_BINLOG_CANT_DELETE_FILE)

  Message: Failed to delete file '%s'

  ER_BINLOG_CANT_DELETE_FILE was added in 8.0.2.

- Error: 10832 SQLSTATE: HY000 (ER_BINLOG_CANT_SET_TMP_INDEX_NAME)

  Message: MYSQL_BIN_LOG::set_crash_safe_index_file_name failed to set file name.

  ER_BINLOG_CANT_SET_TMP_INDEX_NAME was added in 8.0.2.

- Error: 10833 SQLSTATE: HY000 (ER_BINLOG_FAILED_TO_OPEN_TEMPORARY_INDEX_FILE)

  Message: MYSQL_BIN_LOG::open_crash_safe_index_file failed to open temporary index file.

  ER_BINLOG_FAILED_TO_OPEN_TEMPORARY_INDEX_FILE was added in 8.0.2.

- Error: 10834 SQLSTATE: HY000 (ER_BINLOG_ERROR_GETTING_NEXT_LOG_FROM_INDEX)

  Message: next log error: %d offset: %s log: %s included: %d

  ER_BINLOG_ERROR_GETTING_NEXT_LOG_FROM_INDEX was added in 8.0.2, removed after 8.0.12.

- Error: 10835 SQLSTATE: HY000 (ER_BINLOG_CANT_OPEN_TMP_INDEX)

  Message: %s failed to open the crash safe index file.

ER_BINLOG_CANT_OPEN_TMP_INDEX was added in 8.0.2.

- Error: 10836 SQLSTATE: HY000 (ER_BINLOG_CANT_COPY_INDEX_TO_TMP)

  Message: %s failed to copy index file to crash safe index file.

  ER_BINLOG_CANT_COPY_INDEX_TO_TMP was added in 8.0.2.

- Error: 10837 SQLSTATE: HY000 (ER_BINLOG_CANT_CLOSE_TMP_INDEX)

  Message: %s failed to close the crash safe index file.

  ER_BINLOG_CANT_CLOSE_TMP_INDEX was added in 8.0.2.

- Error: 10838 SQLSTATE: HY000 (ER_BINLOG_CANT_MOVE_TMP_TO_INDEX)

  Message: %s failed to move crash safe index file to index file.

  ER_BINLOG_CANT_MOVE_TMP_TO_INDEX was added in 8.0.2.

- Error: 10839 SQLSTATE: HY000 (ER_BINLOG_PURGE_LOGS_CALLED_WITH_FILE_NOT_IN_INDEX)

  Message: MYSQL_BIN_LOG::purge_logs was called with file %s not listed in the index.

  ER_BINLOG_PURGE_LOGS_CALLED_WITH_FILE_NOT_IN_INDEX was added in 8.0.2.

- Error: 10840 SQLSTATE: HY000 (ER_BINLOG_PURGE_LOGS_CANT_SYNC_INDEX_FILE)

  Message: MYSQL_BIN_LOG::purge_logs failed to sync the index file.

  ER_BINLOG_PURGE_LOGS_CANT_SYNC_INDEX_FILE was added in 8.0.2.

- Error: 10841 SQLSTATE: HY000 (ER_BINLOG_PURGE_LOGS_CANT_COPY_TO_REGISTER_FILE)

  Message: MYSQL_BIN_LOG::purge_logs failed to copy %s to register file.

  ER_BINLOG_PURGE_LOGS_CANT_COPY_TO_REGISTER_FILE was added in 8.0.2.

- Error: 10842 SQLSTATE: HY000 (ER_BINLOG_PURGE_LOGS_CANT_FLUSH_REGISTER_FILE)

  Message: MYSQL_BIN_LOG::purge_logs failed to flush register file.

  ER_BINLOG_PURGE_LOGS_CANT_FLUSH_REGISTER_FILE was added in 8.0.2.

- Error: 10843 SQLSTATE: HY000 (ER_BINLOG_PURGE_LOGS_CANT_UPDATE_INDEX_FILE)

  Message: MYSQL_BIN_LOG::purge_logs failed to update the index file

  ER_BINLOG_PURGE_LOGS_CANT_UPDATE_INDEX_FILE was added in 8.0.2.

- Error: 10844 SQLSTATE: HY000 (ER_BINLOG_PURGE_LOGS_FAILED_TO_PURGE_LOG)

  Message: MYSQL_BIN_LOG::purge_logs failed to process registered files that would be purged.

  ER_BINLOG_PURGE_LOGS_FAILED_TO_PURGE_LOG was added in 8.0.2.

- Error: 10845 SQLSTATE: HY000 (ER_BINLOG_FAILED_TO_SET_PURGE_INDEX_FILE_NAME)

  Message: MYSQL_BIN_LOG::set_purge_index_file_name failed to set file name.

  ER_BINLOG_FAILED_TO_SET_PURGE_INDEX_FILE_NAME was added in 8.0.2.

- Error: 10846 SQLSTATE: HY000 (ER_BINLOG_FAILED_TO_OPEN_REGISTER_FILE)

Message: MYSQL_BIN_LOG::open_purge_index_file failed to open register file.

ER_BINLOG_FAILED_TO_OPEN_REGISTER_FILE was added in 8.0.2.

- Error: 10847 SQLSTATE: HY000 (ER_BINLOG_FAILED_TO_REINIT_REGISTER_FILE)

  Message: MYSQL_BIN_LOG::purge_index_entry failed to reinit register file for read

  ER_BINLOG_FAILED_TO_REINIT_REGISTER_FILE was added in 8.0.2.

- Error: 10848 SQLSTATE: HY000 (ER_BINLOG_FAILED_TO_READ_REGISTER_FILE)

  Message: MYSQL_BIN_LOG::purge_index_entry error %d reading from register file.

  ER_BINLOG_FAILED_TO_READ_REGISTER_FILE was added in 8.0.2.

- Error: 10849 SQLSTATE: HY000 (ER_CANT_STAT_FILE)

  Message: Failed to execute mysql_file_stat on file '%s'

  ER_CANT_STAT_FILE was added in 8.0.2.

- Error: 10850 SQLSTATE: HY000 (ER_BINLOG_CANT_DELETE_LOG_FILE_DOES_INDEX_MATCH_FILES)

  Message: Failed to delete log file '%s'; consider examining correspondence of your binlog index file to the actual binlog files

  ER_BINLOG_CANT_DELETE_LOG_FILE_DOES_INDEX_MATCH_FILES was added in 8.0.2.

- Error: 10851 SQLSTATE: HY000 (ER_BINLOG_CANT_DELETE_FILE_AND_READ_BINLOG_INDEX)

  Message: Failed to delete file '%s' and read the binlog index file

  ER_BINLOG_CANT_DELETE_FILE_AND_READ_BINLOG_INDEX was added in 8.0.2.

- Error: 10852 SQLSTATE: HY000 (ER_BINLOG_FAILED_TO_DELETE_LOG_FILE)

  Message: Failed to delete log file '%s'

  ER_BINLOG_FAILED_TO_DELETE_LOG_FILE was added in 8.0.2.

- Error: 10853 SQLSTATE: HY000 (ER_BINLOG_LOGGING_INCIDENT_TO_STOP_SLAVES)

  Message: %s An incident event has been written to the binary log which will stop the slaves.

  ER_BINLOG_LOGGING_INCIDENT_TO_STOP_SLAVES was added in 8.0.2.

- Error: 10854 SQLSTATE: HY000 (ER_BINLOG_CANT_FIND_LOG_IN_INDEX)

  Message: find_log_pos() failed (error: %d)

  ER_BINLOG_CANT_FIND_LOG_IN_INDEX was added in 8.0.2.

- Error: 10855 SQLSTATE: HY000 (ER_BINLOG_RECOVERING_AFTER_CRASH_USING)

  Message: Recovering after a crash using %s

  ER_BINLOG_RECOVERING_AFTER_CRASH_USING was added in 8.0.2.

- Error: 10856 SQLSTATE: HY000 (ER_BINLOG_CANT_OPEN_CRASHED_BINLOG)

Message: Failed to open the crashed binlog file when master server is recovering it.

ER_BINLOG_CANT_OPEN_CRASHED_BINLOG was added in 8.0.2.

- Error: 10857 SQLSTATE: HY000 (ER_BINLOG_CANT_TRIM_CRASHED_BINLOG)

  Message: Failed to trim the crashed binlog file when master server is recovering it.

  ER_BINLOG_CANT_TRIM_CRASHED_BINLOG was added in 8.0.2.

- Error: 10858 SQLSTATE: HY000 (ER_BINLOG_CRASHED_BINLOG_TRIMMED)

  Message: Crashed binlog file %s size is %llu, but recovered up to %llu. Binlog trimmed to %llu bytes.

  ER_BINLOG_CRASHED_BINLOG_TRIMMED was added in 8.0.2.

- Error: 10859 SQLSTATE: HY000 (ER_BINLOG_CANT_CLEAR_IN_USE_FLAG_FOR_CRASHED_BINLOG)

  Message: Failed to clear LOG_EVENT_BINLOG_IN_USE_F for the crashed binlog file when master server is recovering it.

  ER_BINLOG_CANT_CLEAR_IN_USE_FLAG_FOR_CRASHED_BINLOG was added in 8.0.2.

- Error: 10860 SQLSTATE: HY000 (ER_BINLOG_FAILED_TO_RUN_AFTER_SYNC_HOOK)

  Message: Failed to run 'after_sync' hooks

  ER_BINLOG_FAILED_TO_RUN_AFTER_SYNC_HOOK was added in 8.0.2.

- Error: 10861 SQLSTATE: HY000 (ER_TURNING_LOGGING_OFF_FOR_THE_DURATION)

  Message: %s Hence turning logging off for the whole duration of the MySQL server process. To turn it on again: fix the cause, shutdown the MySQL server and restart it.

  ER_TURNING_LOGGING_OFF_FOR_THE_DURATION was added in 8.0.2.

- Error: 10862 SQLSTATE: HY000 (ER_BINLOG_FAILED_TO_RUN_AFTER_FLUSH_HOOK)

  Message: Failed to run 'after_flush' hooks

  ER_BINLOG_FAILED_TO_RUN_AFTER_FLUSH_HOOK was added in 8.0.2.

- Error: 10863 SQLSTATE: HY000 (ER_BINLOG_CRASH_RECOVERY_FAILED)

  Message: Crash recovery failed. Either correct the problem (if it's, for example, out of memory error) and restart, or delete (or rename) binary log and start mysqld with --tc-heuristic-recover={commit|rollback}

  ER_BINLOG_CRASH_RECOVERY_FAILED was added in 8.0.2.

- Error: 10864 SQLSTATE: HY000 (ER_BINLOG_WARNING_SUPPRESSED)

  Message: The following warning was suppressed %d times during the last %d seconds in the error log

  ER_BINLOG_WARNING_SUPPRESSED was added in 8.0.2.

- Error: 10865 SQLSTATE: HY000 (ER_NDB_LOG_ENTRY)

  Message: NDB: %s

  ER_NDB_LOG_ENTRY was added in 8.0.2.

- Error: 10866 SQLSTATE: HY000 (ER_NDB_LOG_ENTRY_WITH_PREFIX)

  Message: NDB %s: %s

  ER_NDB_LOG_ENTRY_WITH_PREFIX was added in 8.0.2.

- Error: 10867 SQLSTATE: HY000 (ER_NDB_BINLOG_CANT_CREATE_PURGE_THD)

  Message: NDB: Unable to purge %s.%s File=%s (failed to setup thd)

  ER_NDB_BINLOG_CANT_CREATE_PURGE_THD was added in 8.0.2.

- Error: 10868 SQLSTATE: HY000 (ER_INNODB_UNKNOWN_COLLATION)

  Message: Unknown collation #%lu.

  ER_INNODB_UNKNOWN_COLLATION was added in 8.0.2.

- Error: 10869 SQLSTATE: HY000 (ER_INNODB_INVALID_LOG_GROUP_HOME_DIR)

  Message: syntax error in innodb_log_group_home_dir

  ER_INNODB_INVALID_LOG_GROUP_HOME_DIR was added in 8.0.2.

- Error: 10870 SQLSTATE: HY000 (ER_INNODB_INVALID_INNODB_UNDO_DIRECTORY)

  Message: syntax error in innodb_undo_directory

  ER_INNODB_INVALID_INNODB_UNDO_DIRECTORY was added in 8.0.2.

- Error: 10871 SQLSTATE: HY000 (ER_INNODB_ILLEGAL_COLON_IN_POOL)

  Message: InnoDB: innodb_buffer_pool_filename cannot have colon (:) in the file name.

  ER_INNODB_ILLEGAL_COLON_IN_POOL was added in 8.0.2.

- Error: 10872 SQLSTATE: HY000 (ER_INNODB_INVALID_PAGE_SIZE)

  Message: InnoDB: Invalid page size=%lu.

  ER_INNODB_INVALID_PAGE_SIZE was added in 8.0.2.

- Error: 10873 SQLSTATE: HY000 (ER_INNODB_DIRTY_WATER_MARK_NOT_LOW)

  Message: InnoDB: innodb_max_dirty_pages_pct_lwm cannot be set higher than innodb_max_dirty_pages_pct. Setting innodb_max_dirty_pages_pct_lwm to %lf

  ER_INNODB_DIRTY_WATER_MARK_NOT_LOW was added in 8.0.2.

- Error: 10874 SQLSTATE: HY000 (ER_INNODB_IO_CAPACITY_EXCEEDS_MAX)

  Message: InnoDB: innodb_io_capacity cannot be set higher than innodb_io_capacity_max. Setting innodb_io_capacity to %lu

  ER_INNODB_IO_CAPACITY_EXCEEDS_MAX was added in 8.0.2.

- Error: 10875 SQLSTATE: HY000 (ER_INNODB_FILES_SAME)

  Message: %s and %s file names seem to be the same.

  ER_INNODB_FILES_SAME was added in 8.0.2.

- Error: 10876 SQLSTATE: HY000 (ER_INNODB_UNREGISTERED_TRX_ACTIVE)

Message: Transaction not registered for MySQL 2PC, but transaction is active

`ER_INNODB_UNREGISTERED_TRX_ACTIVE` was added in 8.0.2.

- Error: `10877` SQLSTATE: `HY000` (`ER_INNODB_CLOSING_CONNECTION_ROLLS_BACK`)

  Message: MySQL is closing a connection that has an active InnoDB transaction. %s row modifications will roll back.

  `ER_INNODB_CLOSING_CONNECTION_ROLLS_BACK` was added in 8.0.2.

- Error: `10878` SQLSTATE: `HY000` (`ER_INNODB_TRX_XLATION_TABLE_OOM`)

  Message: InnoDB: fail to allocate memory for index translation table. Number of Index:%lu, array size:%lu

  `ER_INNODB_TRX_XLATION_TABLE_OOM` was added in 8.0.2.

- Error: `10879` SQLSTATE: `HY000` (`ER_INNODB_CANT_FIND_INDEX_IN_INNODB_DD`)

  Message: Cannot find index %s in InnoDB index dictionary.

  `ER_INNODB_CANT_FIND_INDEX_IN_INNODB_DD` was added in 8.0.2.

- Error: `10880` SQLSTATE: `HY000` (`ER_INNODB_INDEX_COLUMN_INFO_UNLIKE_MYSQLS`)

  Message: Found index %s whose column info does not match that of MySQL.

  `ER_INNODB_INDEX_COLUMN_INFO_UNLIKE_MYSQLS` was added in 8.0.2.

- Error: `10881` SQLSTATE: `HY000` (`ER_INNODB_CANT_OPEN_TABLE`)

  Message: Failed to open table %s.

  `ER_INNODB_CANT_OPEN_TABLE` was added in 8.0.2.

- Error: `10882` SQLSTATE: `HY000` (`ER_INNODB_CANT_BUILD_INDEX_XLATION_TABLE_FOR`)

  Message: Build InnoDB index translation table for Table %s failed

  `ER_INNODB_CANT_BUILD_INDEX_XLATION_TABLE_FOR` was added in 8.0.2.

- Error: `10883` SQLSTATE: `HY000` (`ER_INNODB_PK_NOT_IN_MYSQL`)

  Message: Table %s has a primary key in InnoDB data dictionary, but not in MySQL!

  `ER_INNODB_PK_NOT_IN_MYSQL` was added in 8.0.2.

- Error: `10884` SQLSTATE: `HY000` (`ER_INNODB_PK_ONLY_IN_MYSQL`)

  Message: Table %s has no primary key in InnoDB data dictionary, but has one in MySQL! If you created the table with a MySQL version < 3.23.54 and did not define a primary key, but defined a unique key with all non-NULL columns, then MySQL internally treats that key as the primary key. You can fix this error by dump + DROP + CREATE + reimport of the table.

  `ER_INNODB_PK_ONLY_IN_MYSQL` was added in 8.0.2.

- Error: `10885` SQLSTATE: `HY000` (`ER_INNODB_CLUSTERED_INDEX_PRIVATE`)

  Message: Table %s key_used_on_scan is %lu even though there is no primary key inside InnoDB.

  `ER_INNODB_CLUSTERED_INDEX_PRIVATE` was added in 8.0.2.

- Error: 10886 SQLSTATE: HY000 (ER_INNODB_PARTITION_TABLE_LOWERCASED)

  Message: Partition table %s opened after converting to lower case. The table may have been moved from a case in-sensitive file system. Please recreate table in the current file system

  ER_INNODB_PARTITION_TABLE_LOWERCASED was added in 8.0.2.

- Error: 10887 SQLSTATE: HY000 (ER_ERRMSG_REPLACEMENT_DODGY)

  Message: Cannot replace error message (%s,%s,%s) "%s" with "%s"; wrong number or type of %% subsitutions.

  ER_ERRMSG_REPLACEMENT_DODGY was added in 8.0.2.

- Error: 10888 SQLSTATE: HY000 (ER_ERRMSG_REPLACEMENTS_FAILED)

  Message: Table for error message replacements could not be found or read, or one or more replacements could not be applied.

  ER_ERRMSG_REPLACEMENTS_FAILED was added in 8.0.2.

- Error: 10889 SQLSTATE: HY000 (ER_NPIPE_CANT_CREATE)

  Message: %s: %s

  ER_NPIPE_CANT_CREATE was added in 8.0.2.

- Error: 10890 SQLSTATE: HY000 (ER_PARTITION_MOVE_CREATED_DUPLICATE_ROW_PLEASE_FIX)

  Message: Table '%s': Delete from part %d failed with error %d. But it was already inserted into part %d, when moving the misplaced row! Please manually fix the duplicate row: %s

  ER_PARTITION_MOVE_CREATED_DUPLICATE_ROW_PLEASE_FIX was added in 8.0.2.

- Error: 10891 SQLSTATE: HY000 (ER_AUDIT_CANT_ABORT_COMMAND)

  Message: Command '%s' cannot be aborted. The trigger error was (%d) [%s]: %s

  ER_AUDIT_CANT_ABORT_COMMAND was added in 8.0.2.

- Error: 10892 SQLSTATE: HY000 (ER_AUDIT_CANT_ABORT_EVENT)

  Message: Event '%s' cannot be aborted. The trigger error was (%d) [%s]: %s

  ER_AUDIT_CANT_ABORT_EVENT was added in 8.0.2.

- Error: 10893 SQLSTATE: HY000 (ER_AUDIT_WARNING)

  Message: %s. The trigger error was (%d) [%s]: %s

  ER_AUDIT_WARNING was added in 8.0.2.

- Error: 10894 SQLSTATE: HY000 (ER_NDB_NUMBER_OF_CHANNELS)

  Message: Slave SQL: Configuration with number of replication masters = %u' is not supported when applying to Ndb

  ER_NDB_NUMBER_OF_CHANNELS was added in 8.0.2.

- Error: 10895 SQLSTATE: HY000 (ER_NDB_SLAVE_PARALLEL_WORKERS)

  Message: Slave SQL: Configuration 'slave_parallel_workers = %lu' is not supported when applying to Ndb

ER_NDB_SLAVE_PARALLEL_WORKERS was added in 8.0.2.

- Error: 10896 SQLSTATE: HY000 (ER_NDB_DISTRIBUTING_ERR)

  Message: NDB %s: distributing %s err: %u

  ER_NDB_DISTRIBUTING_ERR was added in 8.0.2.

- Error: 10897 SQLSTATE: HY000 (ER_RPL_SLAVE_INSECURE_CHANGE_MASTER)

  Message: Storing MySQL user name or password information in the master info repository is not secure and is therefore not recommended. Please consider using the USER and PASSWORD connection options for START SLAVE; see the 'START SLAVE Syntax' in the MySQL Manual for more information.

  ER_RPL_SLAVE_INSECURE_CHANGE_MASTER was added in 8.0.11.

- Error: 10898 SQLSTATE: HY000 (ER_RPL_SLAVE_FLUSH_RELAY_LOGS_NOT_ALLOWED)

  Message: FLUSH RELAY LOGS cannot be performed on channel '%s'.

  ER_RPL_SLAVE_FLUSH_RELAY_LOGS_NOT_ALLOWED was added in 8.0.11.

- Error: 10899 SQLSTATE: HY000 (ER_RPL_SLAVE_INCORRECT_CHANNEL)

  Message: Slave channel '%s' does not exist.

  ER_RPL_SLAVE_INCORRECT_CHANNEL was added in 8.0.11.

- Error: 10900 SQLSTATE: HY000 (ER_FAILED_TO_FIND_DL_ENTRY)

  Message: Can't find symbol '%s' in library.

  ER_FAILED_TO_FIND_DL_ENTRY was added in 8.0.11.

- Error: 10901 SQLSTATE: HY000 (ER_FAILED_TO_OPEN_SHARED_LIBRARY)

  Message: Can't open shared library '%s' (errno: %d %s).

  ER_FAILED_TO_OPEN_SHARED_LIBRARY was added in 8.0.11.

- Error: 10902 SQLSTATE: HY000 (ER_THREAD_PRIORITY_IGNORED)

  Message: Thread priority attribute setting in Resource Group SQL shall be ignored due to unsupported platform or insufficient privilege.

  ER_THREAD_PRIORITY_IGNORED was added in 8.0.4.

- Error: 10903 SQLSTATE: HY000 (ER_BINLOG_CACHE_SIZE_TOO_LARGE)

  Message: Option binlog_cache_size (%lu) is greater than max_binlog_cache_size (%lu); setting binlog_cache_size equal to max_binlog_cache_size.

  ER_BINLOG_CACHE_SIZE_TOO_LARGE was added in 8.0.11.

- Error: 10904 SQLSTATE: HY000 (ER_BINLOG_STMT_CACHE_SIZE_TOO_LARGE)

  Message: Option binlog_stmt_cache_size (%lu) is greater than max_binlog_stmt_cache_size (%lu); setting binlog_stmt_cache_size equal to max_binlog_stmt_cache_size.

  ER_BINLOG_STMT_CACHE_SIZE_TOO_LARGE was added in 8.0.11.

- Error: 10905 SQLSTATE: HY000 (ER_FAILED_TO_GENERATE_UNIQUE_LOGFILE)

Message: Can't generate a unique log-filename %s.(1-999).

`ER_FAILED_TO_GENERATE_UNIQUE_LOGFILE` was added in 8.0.11.

- Error: `10906` SQLSTATE: `HY000` (`ER_FAILED_TO_READ_FILE`)

  Message: Error reading file '%s' (errno: %d - %s)

  `ER_FAILED_TO_READ_FILE` was added in 8.0.11.

- Error: `10907` SQLSTATE: `HY000` (`ER_FAILED_TO_WRITE_TO_FILE`)

  Message: Error writing file '%s' (errno: %d - %s)

  `ER_FAILED_TO_WRITE_TO_FILE` was added in 8.0.11.

- Error: `10908` SQLSTATE: `HY000` (`ER_BINLOG_UNSAFE_MESSAGE_AND_STATEMENT`)

  Message: %s Statement: %s

  `ER_BINLOG_UNSAFE_MESSAGE_AND_STATEMENT` was added in 8.0.11.

- Error: `10909` SQLSTATE: `HY000` (`ER_FORCE_CLOSE_THREAD`)

  Message: %s: Forcing close of thread %ld user: '%s'.

  `ER_FORCE_CLOSE_THREAD` was added in 8.0.11.

- Error: `10910` SQLSTATE: `HY000` (`ER_SERVER_SHUTDOWN_COMPLETE`)

  Message: %s: Shutdown complete (mysqld %s) %s.

  `ER_SERVER_SHUTDOWN_COMPLETE` was added in 8.0.11.

- Error: `10911` SQLSTATE: `HY000` (`ER_RPL_CANT_HAVE_SAME_BASENAME`)

  Message: Cannot have same base name '%s' for both binary and relay logs. Please check %s (default '%s' if --log-bin option is not used, default '%s' if --log-bin option is used without argument) and %s (default '%s') options to ensure they do not conflict.

  `ER_RPL_CANT_HAVE_SAME_BASENAME` was added in 8.0.3.

- Error: `10912` SQLSTATE: `HY000` (`ER_RPL_GTID_MODE_REQUIRES_ENFORCE_GTID_CONSISTENCY_ON`)

  Message: GTID_MODE = ON requires ENFORCE_GTID_CONSISTENCY = ON.

  `ER_RPL_GTID_MODE_REQUIRES_ENFORCE_GTID_CONSISTENCY_ON` was added in 8.0.11.

- Error: `10913` SQLSTATE: `HY000` (`ER_WARN_NO_SERVERID_SPECIFIED`)

  Message: You have not provided a mandatory server-id. Servers in a replication topology must have unique server-ids. Please refer to the proper server start-up parameters documentation.

  `ER_WARN_NO_SERVERID_SPECIFIED` was added in 8.0.3.

- Error: `10914` SQLSTATE: `HY000` (`ER_ABORTING_USER_CONNECTION`)

  Message: Aborted connection %u to db: '%s' user: '%s' host: '%s' (%s).

  `ER_ABORTING_USER_CONNECTION` was added in 8.0.11.

- Error: `10915` SQLSTATE: `HY000` (`ER_SQL_MODE_MERGED_WITH_STRICT_MODE`)

Message: 'NO_ZERO_DATE', 'NO_ZERO_IN_DATE' and 'ERROR_FOR_DIVISION_BY_ZERO' sql modes should be used with strict mode. They will be merged with strict mode in a future release.

`ER_SQL_MODE_MERGED_WITH_STRICT_MODE` was added in 8.0.11.

- Error: `10916` SQLSTATE: `HY000` (`ER_GTID_PURGED_WAS_UPDATED`)

  Message: @@GLOBAL.GTID_PURGED was changed from '%s' to '%s'.

  `ER_GTID_PURGED_WAS_UPDATED` was added in 8.0.11.

- Error: `10917` SQLSTATE: `HY000` (`ER_GTID_EXECUTED_WAS_UPDATED`)

  Message: @@GLOBAL.GTID_EXECUTED was changed from '%s' to '%s'.

  `ER_GTID_EXECUTED_WAS_UPDATED` was added in 8.0.11.

- Error: `10918` SQLSTATE: `HY000` (`ER_DEPRECATE_MSG_WITH_REPLACEMENT`)

  Message: '%s' is deprecated and will be removed in a future release. Please use %s instead.

  `ER_DEPRECATE_MSG_WITH_REPLACEMENT` was added in 8.0.11.

- Error: `10919` SQLSTATE: `HY000` (`ER_TRG_CREATION_CTX_NOT_SET`)

  Message: Triggers for table `%s`.`%s` have no creation context

  `ER_TRG_CREATION_CTX_NOT_SET` was added in 8.0.11.

- Error: `10920` SQLSTATE: `HY000` (`ER_FILE_HAS_OLD_FORMAT`)

  Message: '%s' has an old format, you should re-create the '%s' object(s)

  `ER_FILE_HAS_OLD_FORMAT` was added in 8.0.11.

- Error: `10921` SQLSTATE: `HY000` (`ER_VIEW_CREATION_CTX_NOT_SET`)

  Message: View `%s`.`%s` has no creation context

  `ER_VIEW_CREATION_CTX_NOT_SET` was added in 8.0.11.

- Error: `10922` SQLSTATE: `HY000` (`ER_TABLE_NAME_CAUSES_TOO_LONG_PATH`)

  Message: Long database name and identifier for object resulted in path length exceeding %d characters. Path: '%s'.

  `ER_TABLE_NAME_CAUSES_TOO_LONG_PATH` was added in 8.0.11.

- Error: `10923` SQLSTATE: `HY000` (`ER_TABLE_UPGRADE_REQUIRED`)

  Message: Table upgrade required. Please do "REPAIR TABLE `%s`" or dump/reload to fix it!

  `ER_TABLE_UPGRADE_REQUIRED` was added in 8.0.11.

- Error: `10924` SQLSTATE: `HY000` (`ER_GET_ERRNO_FROM_STORAGE_ENGINE`)

  Message: Got error %d - '%s' from storage engine.

  `ER_GET_ERRNO_FROM_STORAGE_ENGINE` was added in 8.0.11.

- Error: `10925` SQLSTATE: `HY000` (`ER_ACCESS_DENIED_ERROR_WITHOUT_PASSWORD`)

  Message: Access denied for user '%s'@'%s'

ER_ACCESS_DENIED_ERROR_WITHOUT_PASSWORD was added in 8.0.11.

- Error: 10926 SQLSTATE: HY000 (ER_ACCESS_DENIED_ERROR_WITH_PASSWORD)

  Message: Access denied for user '%s'@'%s' (using password: %s)

  ER_ACCESS_DENIED_ERROR_WITH_PASSWORD was added in 8.0.11.

- Error: 10927 SQLSTATE: HY000 (ER_ACCESS_DENIED_FOR_USER_ACCOUNT_LOCKED)

  Message: Access denied for user '%s'@'%s'. Account is locked.

  ER_ACCESS_DENIED_FOR_USER_ACCOUNT_LOCKED was added in 8.0.11.

- Error: 10928 SQLSTATE: HY000 (ER_MUST_CHANGE_EXPIRED_PASSWORD)

  Message: Your password has expired. To log in you must change it using a client that supports expired passwords.

  ER_MUST_CHANGE_EXPIRED_PASSWORD was added in 8.0.11.

- Error: 10929 SQLSTATE: HY000 (ER_SYSTEM_TABLES_NOT_SUPPORTED_BY_STORAGE_ENGINE)

  Message: Storage engine '%s' does not support system tables. [%s.%s].

  ER_SYSTEM_TABLES_NOT_SUPPORTED_BY_STORAGE_ENGINE was added in 8.0.11.

- Error: 10930 SQLSTATE: HY000 (ER_FILESORT_TERMINATED)

  Message: Sort aborted

  ER_FILESORT_TERMINATED was added in 8.0.11.

- Error: 10931 SQLSTATE: HY000 (ER_SERVER_STARTUP_MSG)

  Message: %s: ready for connections. Version: '%s' socket: '%s' port: %d %s.

  ER_SERVER_STARTUP_MSG was added in 8.0.11.

- Error: 10932 SQLSTATE: HY000 (ER_FAILED_TO_FIND_LOCALE_NAME)

  Message: Unknown locale: '%s'.

  ER_FAILED_TO_FIND_LOCALE_NAME was added in 8.0.11.

- Error: 10933 SQLSTATE: HY000 (ER_FAILED_TO_FIND_COLLATION_NAME)

  Message: Unknown collation: '%s'.

  ER_FAILED_TO_FIND_COLLATION_NAME was added in 8.0.11.

- Error: 10934 SQLSTATE: HY000 (ER_SERVER_OUT_OF_RESOURCES)

  Message: Out of memory; check if mysqld or some other process uses all available memory; if not, you may have to use 'ulimit' to allow mysqld to use more memory or you can add more swap space

  ER_SERVER_OUT_OF_RESOURCES was added in 8.0.11.

- Error: 10935 SQLSTATE: HY000 (ER_SERVER_OUTOFMEMORY)

  Message: Out of memory; restart server and try again (needed %d bytes)

ER_SERVER_OUTOFMEMORY was added in 8.0.11.

- Error: 10936 SQLSTATE: HY000 (ER_INVALID_COLLATION_FOR_CHARSET)

  Message: COLLATION '%s' is not valid for CHARACTER SET '%s'

  ER_INVALID_COLLATION_FOR_CHARSET was added in 8.0.11.

- Error: 10937 SQLSTATE: HY000 (ER_CANT_START_ERROR_LOG_SERVICE)

  Message: Failed to set %s at or around "%s" -- service is valid, but can not be initialized; please check its configuration and make sure it can read its input(s) and write to its output(s).

  ER_CANT_START_ERROR_LOG_SERVICE was added in 8.0.11.

- Error: 10938 SQLSTATE: HY000 (ER_CREATING_NEW_UUID_FIRST_START)

  Message: Generating a new UUID: %s.

  ER_CREATING_NEW_UUID_FIRST_START was added in 8.0.11.

- Error: 10939 SQLSTATE: HY000 (ER_FAILED_TO_GET_ABSOLUTE_PATH)

  Message: Failed to get absolute path of program executable %s

  ER_FAILED_TO_GET_ABSOLUTE_PATH was added in 8.0.11.

- Error: 10940 SQLSTATE: HY000 (ER_PERFSCHEMA_COMPONENTS_INFRASTRUCTURE_BOOTSTRAP)

  Message: Failed to bootstrap performance schema components infrastructure.

  ER_PERFSCHEMA_COMPONENTS_INFRASTRUCTURE_BOOTSTRAP was added in 8.0.11.

- Error: 10941 SQLSTATE: HY000 (ER_PERFSCHEMA_COMPONENTS_INFRASTRUCTURE_SHUTDOWN)

  Message: Failed to deinit performance schema components infrastructure.

  ER_PERFSCHEMA_COMPONENTS_INFRASTRUCTURE_SHUTDOWN was added in 8.0.11.

- Error: 10942 SQLSTATE: HY000 (ER_DUP_FD_OPEN_FAILED)

  Message: Could not open duplicate fd for %s: %s.

  ER_DUP_FD_OPEN_FAILED was added in 8.0.11.

- Error: 10943 SQLSTATE: HY000 (ER_SYSTEM_VIEW_INIT_FAILED)

  Message: System views initialization failed.

  ER_SYSTEM_VIEW_INIT_FAILED was added in 8.0.11.

- Error: 10944 SQLSTATE: HY000 (ER_RESOURCE_GROUP_POST_INIT_FAILED)

  Message: Resource group post initialization failed.

  ER_RESOURCE_GROUP_POST_INIT_FAILED was added in 8.0.11.

- Error: 10945 SQLSTATE: HY000 (ER_RESOURCE_GROUP_SUBSYSTEM_INIT_FAILED)

  Message: Resource Group subsystem initialization failed.

ER_RESOURCE_GROUP_SUBSYSTEM_INIT_FAILED was added in 8.0.11.

- Error: 10946 SQLSTATE: HY000 (ER_FAILED_START_MYSQLD_DAEMON)

  Message: Failed to start mysqld daemon. Check mysqld error log.

  ER_FAILED_START_MYSQLD_DAEMON was added in 8.0.11.

- Error: 10947 SQLSTATE: HY000 (ER_CANNOT_CHANGE_TO_ROOT_DIR)

  Message: Cannot change to root directory: %s.

  ER_CANNOT_CHANGE_TO_ROOT_DIR was added in 8.0.11.

- Error: 10948 SQLSTATE: HY000 (ER_PERSISTENT_PRIVILEGES_BOOTSTRAP)

  Message: Failed to bootstrap persistent privileges.

  ER_PERSISTENT_PRIVILEGES_BOOTSTRAP was added in 8.0.11.

- Error: 10949 SQLSTATE: HY000 (ER_BASEDIR_SET_TO)

  Message: Basedir set to %s.

  ER_BASEDIR_SET_TO was added in 8.0.11.

- Error: 10950 SQLSTATE: HY000 (ER_RPL_FILTER_ADD_WILD_DO_TABLE_FAILED)

  Message: Could not add wild do table rule '%s'!

  ER_RPL_FILTER_ADD_WILD_DO_TABLE_FAILED was added in 8.0.11.

- Error: 10951 SQLSTATE: HY000 (ER_RPL_FILTER_ADD_WILD_IGNORE_TABLE_FAILED)

  Message: Could not add wild ignore table rule '%s'!

  ER_RPL_FILTER_ADD_WILD_IGNORE_TABLE_FAILED was added in 8.0.11.

- Error: 10952 SQLSTATE: HY000 (ER_PRIVILEGE_SYSTEM_INIT_FAILED)

  Message: The privilege system failed to initialize correctly. If you have upgraded your server, make sure you're executing mysql_upgrade to correct the issue.

  ER_PRIVILEGE_SYSTEM_INIT_FAILED was added in 8.0.11.

- Error: 10953 SQLSTATE: HY000 (ER_CANNOT_SET_LOG_ERROR_SERVICES)

  Message: Cannot set services "%s" requested in --log-error-services, using defaults.

  ER_CANNOT_SET_LOG_ERROR_SERVICES was added in 8.0.11.

- Error: 10954 SQLSTATE: HY000 (ER_PERFSCHEMA_TABLES_INIT_FAILED)

  Message: Performance schema tables initialization failed.

  ER_PERFSCHEMA_TABLES_INIT_FAILED was added in 8.0.11.

- Error: 10955 SQLSTATE: HY000 (ER_TX_EXTRACTION_ALGORITHM_FOR_BINLOG_TX_DEPEDENCY_TRACKING)

  Message: The transaction_write_set_extraction must be set to %s when binlog_transaction_dependency_tracking is %s.

ER_TX_EXTRACTION_ALGORITHM_FOR_BINLOG_TX_DEPEDENCY_TRACKING was added in 8.0.11.

- Error: 10956 SQLSTATE: HY000 (ER_INVALID_REPLICATION_TIMESTAMPS)

  Message: Invalid replication timestamps: original commit timestamp is more recent than the immediate commit timestamp. This may be an issue if delayed replication is active. Make sure that servers have their clocks set to the correct time. No further message will be emitted until after timestamps become valid again.

  ER_INVALID_REPLICATION_TIMESTAMPS was added in 8.0.11.

- Error: 10957 SQLSTATE: HY000 (ER_RPL_TIMESTAMPS_RETURNED_TO_NORMAL)

  Message: The replication timestamps have returned to normal values.

  ER_RPL_TIMESTAMPS_RETURNED_TO_NORMAL was added in 8.0.11.

- Error: 10958 SQLSTATE: HY000 (ER_BINLOG_FILE_OPEN_FAILED)

  Message: %s.

  ER_BINLOG_FILE_OPEN_FAILED was added in 8.0.11.

- Error: 10959 SQLSTATE: HY000 (ER_BINLOG_EVENT_WRITE_TO_STMT_CACHE_FAILED)

  Message: Failed to write an incident event into stmt_cache.

  ER_BINLOG_EVENT_WRITE_TO_STMT_CACHE_FAILED was added in 8.0.11.

- Error: 10960 SQLSTATE: HY000 (ER_SLAVE_RELAY_LOG_TRUNCATE_INFO)

  Message: Relaylog file %s size was %llu, but was truncated at %llu.

  ER_SLAVE_RELAY_LOG_TRUNCATE_INFO was added in 8.0.11.

- Error: 10961 SQLSTATE: HY000 (ER_SLAVE_RELAY_LOG_PURGE_FAILED)

  Message: Unable to purge relay log files. %s:%s.

  ER_SLAVE_RELAY_LOG_PURGE_FAILED was added in 8.0.11.

- Error: 10962 SQLSTATE: HY000 (ER_RPL_SLAVE_FILTER_CREATE_FAILED)

  Message: Slave: failed in creating filter for channel '%s'.

  ER_RPL_SLAVE_FILTER_CREATE_FAILED was added in 8.0.11.

- Error: 10963 SQLSTATE: HY000 (ER_RPL_SLAVE_GLOBAL_FILTERS_COPY_FAILED)

  Message: Slave: failed in copying the global filters to its own per-channel filters on configuration for channel '%s'.

  ER_RPL_SLAVE_GLOBAL_FILTERS_COPY_FAILED was added in 8.0.11.

- Error: 10964 SQLSTATE: HY000 (ER_RPL_SLAVE_RESET_FILTER_OPTIONS)

  Message: There are per-channel replication filter(s) configured for channel '%s' which does not exist. The filter(s) have been discarded.

  ER_RPL_SLAVE_RESET_FILTER_OPTIONS was added in 8.0.11.

- Error: 10965 SQLSTATE: HY000 (ER_MISSING_GRANT_SYSTEM_TABLE)

Message: Missing system table mysql.global_grants; please run mysql_upgrade to create it.

`ER_MISSING_GRANT_SYSTEM_TABLE` was added in 8.0.11.

- Error: `10966` SQLSTATE: `HY000` (`ER_MISSING_ACL_SYSTEM_TABLE`)

  Message: ACL table mysql.%.*s missing. Some operations may fail.

  `ER_MISSING_ACL_SYSTEM_TABLE` was added in 8.0.11.

- Error: `10967` SQLSTATE: `HY000` (`ER_ANONYMOUS_AUTH_ID_NOT_ALLOWED_IN_MANDATORY_ROLES`)

  Message: Can't set mandatory_role %s@%s: Anonymous authorization IDs are not allowed as roles.

  `ER_ANONYMOUS_AUTH_ID_NOT_ALLOWED_IN_MANDATORY_ROLES` was added in 8.0.11.

- Error: `10968` SQLSTATE: `HY000` (`ER_UNKNOWN_AUTH_ID_IN_MANDATORY_ROLE`)

  Message: Can't set mandatory_role: There's no such authorization ID %s@%s.

  `ER_UNKNOWN_AUTH_ID_IN_MANDATORY_ROLE` was added in 8.0.11.

- Error: `10969` SQLSTATE: `HY000` (`ER_WRITE_ROW_TO_PARTITION_FAILED`)

  Message: Table '%s' failed to move/insert a row from part %d into part %d: %s.

  `ER_WRITE_ROW_TO_PARTITION_FAILED` was added in 8.0.11.

- Error: `10970` SQLSTATE: `HY000` (`ER_RESOURCE_GROUP_METADATA_UPDATE_SKIPPED`)

  Message: Skipped updating resource group metadata in InnoDB read only mode.

  `ER_RESOURCE_GROUP_METADATA_UPDATE_SKIPPED` was added in 8.0.11.

- Error: `10971` SQLSTATE: `HY000` (`ER_FAILED_TO_PERSIST_RESOURCE_GROUP_METADATA`)

  Message: Failed to persist resource group %s to Data Dictionary.

  `ER_FAILED_TO_PERSIST_RESOURCE_GROUP_METADATA` was added in 8.0.11.

- Error: `10972` SQLSTATE: `HY000` (`ER_FAILED_TO_DESERIALIZE_RESOURCE_GROUP`)

  Message: Failed to deserialize resource group %s.

  `ER_FAILED_TO_DESERIALIZE_RESOURCE_GROUP` was added in 8.0.11.

- Error: `10973` SQLSTATE: `HY000` (`ER_FAILED_TO_UPDATE_RESOURCE_GROUP`)

  Message: Update of resource group %s failed.

  `ER_FAILED_TO_UPDATE_RESOURCE_GROUP` was added in 8.0.11.

- Error: `10974` SQLSTATE: `HY000` (`ER_RESOURCE_GROUP_VALIDATION_FAILED`)

  Message: Validation of resource group %s failed. Resource group is disabled.

  `ER_RESOURCE_GROUP_VALIDATION_FAILED` was added in 8.0.11.

- Error: `10975` SQLSTATE: `HY000` (`ER_FAILED_TO_ALLOCATE_MEMORY_FOR_RESOURCE_GROUP`)

  Message: Unable to allocate memory for Resource Group %s.

  `ER_FAILED_TO_ALLOCATE_MEMORY_FOR_RESOURCE_GROUP` was added in 8.0.11.

- Error: 10976 SQLSTATE: HY000 (ER_FAILED_TO_ALLOCATE_MEMORY_FOR_RESOURCE_GROUP_HASH)

  Message: Failed to allocate memory for resource group hash.

  ER_FAILED_TO_ALLOCATE_MEMORY_FOR_RESOURCE_GROUP_HASH was added in 8.0.11.

- Error: 10977 SQLSTATE: HY000 (ER_FAILED_TO_ADD_RESOURCE_GROUP_TO_MAP)

  Message: Failed to add resource group %s to resource group map.

  ER_FAILED_TO_ADD_RESOURCE_GROUP_TO_MAP was added in 8.0.11.

- Error: 10978 SQLSTATE: HY000 (ER_RESOURCE_GROUP_IS_DISABLED)

  Message: Resource group feature is disabled. (Server is compiled with DISABLE_PSI_THREAD).

  ER_RESOURCE_GROUP_IS_DISABLED was added in 8.0.11.

- Error: 10979 SQLSTATE: HY000 (ER_FAILED_TO_APPLY_RESOURCE_GROUP_CONTROLLER)

  Message: Unable to apply resource group controller %s.

  ER_FAILED_TO_APPLY_RESOURCE_GROUP_CONTROLLER was added in 8.0.11.

- Error: 10980 SQLSTATE: HY000 (ER_FAILED_TO_ACQUIRE_LOCK_ON_RESOURCE_GROUP)

  Message: Unable to acquire lock on the resource group %s. Hint to switch resource group shall be ignored.

  ER_FAILED_TO_ACQUIRE_LOCK_ON_RESOURCE_GROUP was added in 8.0.11.

- Error: 10981 SQLSTATE: HY000 (ER_PFS_NOTIFICATION_FUNCTION_REGISTER_FAILED)

  Message: PFS %s notification function registration failed.

  ER_PFS_NOTIFICATION_FUNCTION_REGISTER_FAILED was added in 8.0.11.

- Error: 10982 SQLSTATE: HY000 (ER_RES_GRP_SET_THR_AFFINITY_FAILED)

  Message: Unable to bind thread id %llu to cpu id %u (error code %d - %s).

  ER_RES_GRP_SET_THR_AFFINITY_FAILED was added in 8.0.11.

- Error: 10983 SQLSTATE: HY000 (ER_RES_GRP_SET_THR_AFFINITY_TO_CPUS_FAILED)

  Message: Unable to bind thread id %llu to cpu ids (error code %d - %s).

  ER_RES_GRP_SET_THR_AFFINITY_TO_CPUS_FAILED was added in 8.0.11.

- Error: 10984 SQLSTATE: HY000 (ER_RES_GRP_THD_UNBIND_FROM_CPU_FAILED)

  Message: Unbind thread id %llu failed. (error code %d - %s).

  ER_RES_GRP_THD_UNBIND_FROM_CPU_FAILED was added in 8.0.11.

- Error: 10985 SQLSTATE: HY000 (ER_RES_GRP_SET_THREAD_PRIORITY_FAILED)

  Message: Setting thread priority %d to thread id %llu failed. (error code %d - %s).

  ER_RES_GRP_SET_THREAD_PRIORITY_FAILED was added in 8.0.11.

- Error: 10986 SQLSTATE: HY000 (ER_RES_GRP_FAILED_TO_DETERMINE_NICE_CAPABILITY)

Message: Unable to determine CAP_SYS_NICE capability.

ER_RES_GRP_FAILED_TO_DETERMINE_NICE_CAPABILITY was added in 8.0.11.

- Error: 10987 SQLSTATE: HY000 (ER_RES_GRP_FAILED_TO_GET_THREAD_HANDLE)

  Message: %s failed: Failed to get handle for thread %llu.

  ER_RES_GRP_FAILED_TO_GET_THREAD_HANDLE was added in 8.0.11.

- Error: 10988 SQLSTATE: HY000 (ER_RES_GRP_GET_THREAD_PRIO_NOT_SUPPORTED)

  Message: Retrieval of thread priority unsupported on %s.

  ER_RES_GRP_GET_THREAD_PRIO_NOT_SUPPORTED was added in 8.0.11.

- Error: 10989 SQLSTATE: HY000 (ER_RES_GRP_FAILED_DETERMINE_CPU_COUNT)

  Message: Unable to determine the number of CPUs.

  ER_RES_GRP_FAILED_DETERMINE_CPU_COUNT was added in 8.0.11.

- Error: 10990 SQLSTATE: HY000 (ER_RES_GRP_FEATURE_NOT_AVAILABLE)

  Message: Resource group feature shall not be available. Incompatible thread handling option.

  ER_RES_GRP_FEATURE_NOT_AVAILABLE was added in 8.0.11.

- Error: 10991 SQLSTATE: HY000 (ER_RES_GRP_INVALID_THREAD_PRIORITY)

  Message: Invalid thread priority %d for a %s resource group. Allowed range is [%d, %d].

  ER_RES_GRP_INVALID_THREAD_PRIORITY was added in 8.0.11.

- Error: 10992 SQLSTATE: HY000 (ER_RES_GRP_SOLARIS_PROCESSOR_BIND_TO_CPUID_FAILED)

  Message: bind_to_cpu failed: processor_bind for cpuid %u failed (error code %d - %s).

  ER_RES_GRP_SOLARIS_PROCESSOR_BIND_TO_CPUID_FAILED was added in 8.0.11.

- Error: 10993 SQLSTATE: HY000 (ER_RES_GRP_SOLARIS_PROCESSOR_BIND_TO_THREAD_FAILED)

  Message: bind_to_cpu failed: processor_bind for thread %%llx with cpu id %u (error code %d - %s).

  ER_RES_GRP_SOLARIS_PROCESSOR_BIND_TO_THREAD_FAILED was added in 8.0.11.

- Error: 10994 SQLSTATE: HY000 (ER_RES_GRP_SOLARIS_PROCESSOR_AFFINITY_FAILED)

  Message: %s failed: processor_affinity failed (error code %d - %s).

  ER_RES_GRP_SOLARIS_PROCESSOR_AFFINITY_FAILED was added in 8.0.11.

- Error: 10995 SQLSTATE: HY000 (ER_DD_UPGRADE_RENAME_IDX_STATS_FILE_FAILED)

  Message: Error in renaming mysql_index_stats.ibd.

  ER_DD_UPGRADE_RENAME_IDX_STATS_FILE_FAILED was added in 8.0.11.

- Error: 10996 SQLSTATE: HY000 (ER_DD_UPGRADE_DD_OPEN_FAILED)

  Message: Error in opening data directory %s.

ER_DD_UPGRADE_DD_OPEN_FAILED was added in 8.0.11.

- Error: 10997 SQLSTATE: HY000 (ER_DD_UPGRADE_FAILED_TO_FETCH_TABLESPACES)

  Message: Error in fetching list of tablespaces.

  ER_DD_UPGRADE_FAILED_TO_FETCH_TABLESPACES was added in 8.0.11.

- Error: 10998 SQLSTATE: HY000 (ER_DD_UPGRADE_FAILED_TO_ACQUIRE_TABLESPACE)

  Message: Error in acquiring Tablespace for SDI insertion %s.

  ER_DD_UPGRADE_FAILED_TO_ACQUIRE_TABLESPACE was added in 8.0.11.

- Error: 10999 SQLSTATE: HY000 (ER_DD_UPGRADE_FAILED_TO_RESOLVE_TABLESPACE_ENGINE)

  Message: Error in resolving Engine name for tablespace %s with engine %s.

  ER_DD_UPGRADE_FAILED_TO_RESOLVE_TABLESPACE_ENGINE was added in 8.0.11.

- Error: 11000 SQLSTATE: HY000 (ER_FAILED_TO_CREATE_SDI_FOR_TABLESPACE)

  Message: Error in creating SDI for %s tablespace.

  ER_FAILED_TO_CREATE_SDI_FOR_TABLESPACE was added in 8.0.11.

- Error: 11001 SQLSTATE: HY000 (ER_FAILED_TO_STORE_SDI_FOR_TABLESPACE)

  Message: Error in storing SDI for %s tablespace.

  ER_FAILED_TO_STORE_SDI_FOR_TABLESPACE was added in 8.0.11.

- Error: 11002 SQLSTATE: HY000 (ER_DD_UPGRADE_FAILED_TO_FETCH_TABLES)

  Message: Error in fetching list of tables.

  ER_DD_UPGRADE_FAILED_TO_FETCH_TABLES was added in 8.0.11.

- Error: 11003 SQLSTATE: HY000 (ER_DD_UPGRADE_DD_POPULATED)

  Message: Finished populating Data Dictionary tables with data.

  ER_DD_UPGRADE_DD_POPULATED was added in 8.0.11.

- Error: 11004 SQLSTATE: HY000 (ER_DD_UPGRADE_INFO_FILE_OPEN_FAILED)

  Message: Could not open the upgrade info file '%s' in the MySQL servers datadir, errno: %d.

  ER_DD_UPGRADE_INFO_FILE_OPEN_FAILED was added in 8.0.11.

- Error: 11005 SQLSTATE: HY000 (ER_DD_UPGRADE_INFO_FILE_CLOSE_FAILED)

  Message: Could not close the upgrade info file '%s' in the MySQL servers datadir, errno: %d.

  ER_DD_UPGRADE_INFO_FILE_CLOSE_FAILED was added in 8.0.11.

- Error: 11006 SQLSTATE: HY000 (ER_DD_UPGRADE_TABLESPACE_MIGRATION_FAILED)

  Message: Got error %d from SE while migrating tablespaces.

  ER_DD_UPGRADE_TABLESPACE_MIGRATION_FAILED was added in 8.0.11.

- Error: 11007 SQLSTATE: HY000 (ER_DD_UPGRADE_FAILED_TO_CREATE_TABLE_STATS)

Message: Error in creating TABLE statistics entry. Fix statistics data by using ANALYZE command.

`ER_DD_UPGRADE_FAILED_TO_CREATE_TABLE_STATS` was added in 8.0.11.

- Error: `11008` SQLSTATE: `HY000` (`ER_DD_UPGRADE_TABLE_STATS_MIGRATE_COMPLETED`)

  Message: Finished migrating TABLE statistics data.

  `ER_DD_UPGRADE_TABLE_STATS_MIGRATE_COMPLETED` was added in 8.0.11.

- Error: `11009` SQLSTATE: `HY000` (`ER_DD_UPGRADE_FAILED_TO_CREATE_INDEX_STATS`)

  Message: Error in creating Index statistics entry. Fix statistics data by using ANALYZE command.

  `ER_DD_UPGRADE_FAILED_TO_CREATE_INDEX_STATS` was added in 8.0.11.

- Error: `11010` SQLSTATE: `HY000` (`ER_DD_UPGRADE_INDEX_STATS_MIGRATE_COMPLETED`)

  Message: Finished migrating INDEX statistics data.

  `ER_DD_UPGRADE_INDEX_STATS_MIGRATE_COMPLETED` was added in 8.0.11.

- Error: `11011` SQLSTATE: `HY000` (`ER_DD_UPGRADE_FAILED_FIND_VALID_DATA_DIR`)

  Message: Failed to find valid data directory.

  `ER_DD_UPGRADE_FAILED_FIND_VALID_DATA_DIR` was added in 8.0.11.

- Error: `11012` SQLSTATE: `HY000` (`ER_DD_UPGRADE_START`)

  Message: Starting upgrade on data directory.

  `ER_DD_UPGRADE_START` was added in 8.0.11.

- Error: `11013` SQLSTATE: `HY000` (`ER_DD_UPGRADE_FAILED_INIT_DD_SE`)

  Message: Failed to initialize DD Storage Engine.

  `ER_DD_UPGRADE_FAILED_INIT_DD_SE` was added in 8.0.11.

- Error: `11014` SQLSTATE: `HY000` (`ER_DD_UPGRADE_FOUND_PARTIALLY_UPGRADED_DD_ABORT`)

  Message: Found partially upgraded DD. Aborting upgrade and deleting all DD tables. Start the upgrade process again.

  `ER_DD_UPGRADE_FOUND_PARTIALLY_UPGRADED_DD_ABORT` was added in 8.0.11.

- Error: `11015` SQLSTATE: `HY000` (`ER_DD_UPGRADE_FOUND_PARTIALLY_UPGRADED_DD_CONTINUE`)

  Message: Found partially upgraded DD. Upgrade will continue and start the server.

  `ER_DD_UPGRADE_FOUND_PARTIALLY_UPGRADED_DD_CONTINUE` was added in 8.0.11.

- Error: `11016` SQLSTATE: `HY000` (`ER_DD_UPGRADE_SE_LOGS_FAILED`)

  Message: Error in upgrading engine logs.

  `ER_DD_UPGRADE_SE_LOGS_FAILED` was added in 8.0.11.

- Error: `11017` SQLSTATE: `HY000` (`ER_DD_UPGRADE_SDI_INFO_UPDATE_FAILED`)

  Message: Error in updating SDI information.

ER_DD_UPGRADE_SDI_INFO_UPDATE_FAILED was added in 8.0.11.

- Error: 11018 SQLSTATE: HY000 (ER_SKIP_UPDATING_METADATA_IN_SE_RO_MODE)

  Message: Skip updating %s metadata in InnoDB read-only mode.

  ER_SKIP_UPDATING_METADATA_IN_SE_RO_MODE was added in 8.0.11.

- Error: 11019 SQLSTATE: HY000 (ER_CREATED_SYSTEM_WITH_VERSION)

  Message: Created system views with I_S version %d.

  ER_CREATED_SYSTEM_WITH_VERSION was added in 8.0.11.

- Error: 11020 SQLSTATE: HY000 (ER_UNKNOWN_ERROR_DETECTED_IN_SE)

  Message: Unknown error detected %d in handler.

  ER_UNKNOWN_ERROR_DETECTED_IN_SE was added in 8.0.11.

- Error: 11021 SQLSTATE: HY000 (ER_READ_LOG_EVENT_FAILED)

  Message: Error in Log_event::read_log_event(): '%s', data_len: %lu, event_type: %d.

  ER_READ_LOG_EVENT_FAILED was added in 8.0.11.

- Error: 11022 SQLSTATE: HY000 (ER_ROW_DATA_TOO_BIG_TO_WRITE_IN_BINLOG)

  Message: The row data is greater than 4GB, which is too big to write to the binary log.

  ER_ROW_DATA_TOO_BIG_TO_WRITE_IN_BINLOG was added in 8.0.11.

- Error: 11023 SQLSTATE: HY000 (ER_FAILED_TO_CONSTRUCT_DROP_EVENT_QUERY)

  Message: Unable to construct DROP EVENT SQL query string.

  ER_FAILED_TO_CONSTRUCT_DROP_EVENT_QUERY was added in 8.0.11.

- Error: 11024 SQLSTATE: HY000 (ER_FAILED_TO_BINLOG_DROP_EVENT)

  Message: Unable to binlog drop event %s.%s.

  ER_FAILED_TO_BINLOG_DROP_EVENT was added in 8.0.11.

- Error: 11025 SQLSTATE: HY000 (ER_FAILED_TO_START_SLAVE_THREAD)

  Message: Failed to start slave threads for channel '%s'.

  ER_FAILED_TO_START_SLAVE_THREAD was added in 8.0.11.

- Error: 11026 SQLSTATE: HY000 (ER_RPL_IO_THREAD_KILLED)

  Message: %s%s.

  ER_RPL_IO_THREAD_KILLED was added in 8.0.11.

- Error: 11027 SQLSTATE: HY000 (ER_SLAVE_RECONNECT_FAILED)

  Message: Failed registering on master, reconnecting to try again, log '%s' at position %s. %s.

  ER_SLAVE_RECONNECT_FAILED was added in 8.0.11.

- Error: 11028 SQLSTATE: HY000 (ER_SLAVE_KILLED_AFTER_RECONNECT)

Message: Slave I/O thread killed during or after reconnect.

`ER_SLAVE_KILLED_AFTER_RECONNECT` was added in 8.0.11.

- Error: `11029` SQLSTATE: `HY000` (`ER_SLAVE_NOT_STARTED_ON_SOME_CHANNELS`)

  Message: Some of the channels are not created/initialized properly. Check for additional messages above. You will not be able to start replication on those channels until the issue is resolved and the server restarted.

  `ER_SLAVE_NOT_STARTED_ON_SOME_CHANNELS` was added in 8.0.11.

- Error: `11030` SQLSTATE: `HY000` (`ER_FAILED_TO_ADD_RPL_FILTER`)

  Message: Failed to add a replication filter into filter map for channel '%s'.

  `ER_FAILED_TO_ADD_RPL_FILTER` was added in 8.0.11.

- Error: `11031` SQLSTATE: `HY000` (`ER_PER_CHANNEL_RPL_FILTER_CONF_FOR_GRP_RPL`)

  Message: There are per-channel replication filter(s) configured for group replication channel '%s' which is disallowed. The filter(s) have been discarded.

  `ER_PER_CHANNEL_RPL_FILTER_CONF_FOR_GRP_RPL` was added in 8.0.11.

- Error: `11032` SQLSTATE: `HY000` (`ER_RPL_FILTERS_NOT_ATTACHED_TO_CHANNEL`)

  Message: There are per-channel replication filter(s) configured for channel '%s' which does not exist. The filter(s) have been discarded.

  `ER_RPL_FILTERS_NOT_ATTACHED_TO_CHANNEL` was added in 8.0.11.

- Error: `11033` SQLSTATE: `HY000` (`ER_FAILED_TO_BUILD_DO_AND_IGNORE_TABLE_HASHES`)

  Message: An error occurred while building do_table and ignore_table rules to hashes for per-channel filter.

  `ER_FAILED_TO_BUILD_DO_AND_IGNORE_TABLE_HASHES` was added in 8.0.11.

- Error: `11034` SQLSTATE: `HY000` (`ER_CLONE_PLUGIN_NOT_LOADED`)

  Message: Clone plugin not loaded.

  `ER_CLONE_PLUGIN_NOT_LOADED` was added in 8.0.11.

- Error: `11035` SQLSTATE: `HY000` (`ER_CLONE_HANDLER_EXISTS`)

  Message: Clone Handler exists.

  `ER_CLONE_HANDLER_EXISTS` was added in 8.0.11.

- Error: `11036` SQLSTATE: `HY000` (`ER_FAILED_TO_CREATE_CLONE_HANDLER`)

  Message: Could not create Clone Handler.

  `ER_FAILED_TO_CREATE_CLONE_HANDLER` was added in 8.0.11.

- Error: `11037` SQLSTATE: `HY000` (`ER_CYCLE_TIMER_IS_NOT_AVAILABLE`)

  Message: The CYCLE timer is not available. WAIT events in the performance_schema will not be timed.

  `ER_CYCLE_TIMER_IS_NOT_AVAILABLE` was added in 8.0.11.

- Error: 11038 SQLSTATE: HY000 (ER_NANOSECOND_TIMER_IS_NOT_AVAILABLE)

  Message: The NANOSECOND timer is not available. IDLE/STAGE/STATEMENT/TRANSACTION events in the performance_schema will not be timed.

  ER_NANOSECOND_TIMER_IS_NOT_AVAILABLE was added in 8.0.11.

- Error: 11039 SQLSTATE: HY000 (ER_MICROSECOND_TIMER_IS_NOT_AVAILABLE)

  Message: The MICROSECOND timer is not available. IDLE/STAGE/STATEMENT/TRANSACTION events in the performance_schema will not be timed.

  ER_MICROSECOND_TIMER_IS_NOT_AVAILABLE was added in 8.0.11.

- Error: 11040 SQLSTATE: HY000 (ER_PFS_MALLOC_ARRAY_OVERFLOW)

  Message: Failed to allocate memory for %zu chunks each of size %zu for buffer '%s' due to overflow.

  ER_PFS_MALLOC_ARRAY_OVERFLOW was added in 8.0.11.

- Error: 11041 SQLSTATE: HY000 (ER_PFS_MALLOC_ARRAY_OOM)

  Message: Failed to allocate %zu bytes for buffer '%s' due to out-of-memory.

  ER_PFS_MALLOC_ARRAY_OOM was added in 8.0.11.

- Error: 11042 SQLSTATE: HY000 (ER_INNODB_FAILED_TO_FIND_IDX_WITH_KEY_NO)

  Message: InnoDB could not find index %s key no %u for table %s through its index translation table.

  ER_INNODB_FAILED_TO_FIND_IDX_WITH_KEY_NO was added in 8.0.11.

- Error: 11043 SQLSTATE: HY000 (ER_INNODB_FAILED_TO_FIND_IDX)

  Message: Cannot find index %s in InnoDB index translation table.

  ER_INNODB_FAILED_TO_FIND_IDX was added in 8.0.11.

- Error: 11044 SQLSTATE: HY000 (ER_INNODB_FAILED_TO_FIND_IDX_FROM_DICT_CACHE)

  Message: InnoDB could not find key no %u with name %s from dict cache for table %s.

  ER_INNODB_FAILED_TO_FIND_IDX_FROM_DICT_CACHE was added in 8.0.11.

- Error: 11045 SQLSTATE: HY000 (ER_INNODB_ACTIVE_INDEX_CHANGE_FAILED)

  Message: InnoDB: change_active_index(%u) failed.

  ER_INNODB_ACTIVE_INDEX_CHANGE_FAILED was added in 8.0.11.

- Error: 11046 SQLSTATE: HY000 (ER_INNODB_DIFF_IN_REF_LEN)

  Message: Stored ref len is %lu, but table ref len is %lu.

  ER_INNODB_DIFF_IN_REF_LEN was added in 8.0.11.

- Error: 11047 SQLSTATE: HY000 (ER_WRONG_TYPE_FOR_COLUMN_PREFIX_IDX_FLD)

  Message: MySQL is trying to create a column prefix index field, on an inappropriate data type. Table name %s, column name %s.

  ER_WRONG_TYPE_FOR_COLUMN_PREFIX_IDX_FLD was added in 8.0.11.

- Error: 11048 SQLSTATE: HY000 (ER_INNODB_CANNOT_CREATE_TABLE)

Message: Cannot create table %s.

ER_INNODB_CANNOT_CREATE_TABLE was added in 8.0.11.

- Error: 11049 SQLSTATE: HY000 (ER_INNODB_INTERNAL_INDEX)

  Message: Found index %s in InnoDB index list but not its MySQL index number. It could be an InnoDB internal index.

  ER_INNODB_INTERNAL_INDEX was added in 8.0.11.

- Error: 11050 SQLSTATE: HY000 (ER_INNODB_IDX_CNT_MORE_THAN_DEFINED_IN_MYSQL)

  Message: InnoDB: Table %s contains %lu indexes inside InnoDB, which is different from the number of indexes %u defined in MySQL.

  ER_INNODB_IDX_CNT_MORE_THAN_DEFINED_IN_MYSQL was added in 8.0.11.

- Error: 11051 SQLSTATE: HY000 (ER_INNODB_IDX_CNT_FEWER_THAN_DEFINED_IN_MYSQL)

  Message: Table %s contains fewer indexes inside InnoDB than are defined in the MySQL. Have you mixed up with data dictionary from different installation?

  ER_INNODB_IDX_CNT_FEWER_THAN_DEFINED_IN_MYSQL was added in 8.0.11.

- Error: 11052 SQLSTATE: HY000 (ER_INNODB_IDX_COLUMN_CNT_DIFF)

  Message: Index %s of %s has %lu columns unique inside InnoDB, but MySQL is asking statistics for %lu columns. Have you mixed data dictionary from different installation?

  ER_INNODB_IDX_COLUMN_CNT_DIFF was added in 8.0.11.

- Error: 11053 SQLSTATE: HY000 (ER_INNODB_USE_MONITOR_GROUP_NAME)

  Message: Monitor counter '%s' cannot be turned on/off individually. Please use its module name to turn on/off the counters in the module as a group.

  ER_INNODB_USE_MONITOR_GROUP_NAME was added in 8.0.11.

- Error: 11054 SQLSTATE: HY000 (ER_INNODB_MONITOR_DEFAULT_VALUE_NOT_DEFINED)

  Message: Default value is not defined for this set option. Please specify correct counter or module name.

  ER_INNODB_MONITOR_DEFAULT_VALUE_NOT_DEFINED was added in 8.0.11.

- Error: 11055 SQLSTATE: HY000 (ER_INNODB_MONITOR_IS_ENABLED)

  Message: InnoDB: Monitor %s is already enabled.

  ER_INNODB_MONITOR_IS_ENABLED was added in 8.0.11.

- Error: 11056 SQLSTATE: HY000 (ER_INNODB_INVALID_MONITOR_COUNTER_NAME)

  Message: Invalid monitor counter : %s.

  ER_INNODB_INVALID_MONITOR_COUNTER_NAME was added in 8.0.11.

- Error: 11057 SQLSTATE: HY000 (ER_WIN_LOAD_LIBRARY_FAILED)

  Message: LoadLibrary("%s") failed: GetLastError returns %lu.

  ER_WIN_LOAD_LIBRARY_FAILED was added in 8.0.11.

- Error: 11058 SQLSTATE: HY000 (ER_PARTITION_HANDLER_ADMIN_MSG)

  Message: %s.

  ER_PARTITION_HANDLER_ADMIN_MSG was added in 8.0.11.

- Error: 11059 SQLSTATE: HY000 (ER_RPL_RLI_INIT_INFO_MSG)

  Message: %s.

  ER_RPL_RLI_INIT_INFO_MSG was added in 8.0.11.

- Error: 11060 SQLSTATE: HY000 (ER_DD_UPGRADE_TABLE_INTACT_ERROR)

  Message: %s.

  ER_DD_UPGRADE_TABLE_INTACT_ERROR was added in 8.0.11.

- Error: 11061 SQLSTATE: HY000 (ER_SERVER_INIT_COMPILED_IN_COMMANDS)

  Message: %s.

  ER_SERVER_INIT_COMPILED_IN_COMMANDS was added in 8.0.11.

- Error: 11062 SQLSTATE: HY000 (ER_MYISAM_CHECK_METHOD_ERROR)

  Message: %s.

  ER_MYISAM_CHECK_METHOD_ERROR was added in 8.0.11.

- Error: 11063 SQLSTATE: HY000 (ER_MYISAM_CRASHED_ERROR)

  Message: %s.

  ER_MYISAM_CRASHED_ERROR was added in 8.0.11.

- Error: 11064 SQLSTATE: HY000 (ER_WAITPID_FAILED)

  Message: Unable to wait for process %lld.

  ER_WAITPID_FAILED was added in 8.0.11.

- Error: 11065 SQLSTATE: HY000 (ER_FAILED_TO_FIND_MYSQLD_STATUS)

  Message: Unable to determine if daemon is running: %s (rc=%d).

  ER_FAILED_TO_FIND_MYSQLD_STATUS was added in 8.0.11.

- Error: 11066 SQLSTATE: HY000 (ER_INNODB_ERROR_LOGGER_MSG)

  Message: %s

  ER_INNODB_ERROR_LOGGER_MSG was added in 8.0.11.

- Error: 11067 SQLSTATE: HY000 (ER_INNODB_ERROR_LOGGER_FATAL_MSG)

  Message: [FATAL] InnoDB: %s

  ER_INNODB_ERROR_LOGGER_FATAL_MSG was added in 8.0.11.

- Error: 11068 SQLSTATE: HY000 (ER_DEPRECATED_SYNTAX_WITH_REPLACEMENT)

  Message: The syntax '%s' is deprecated and will be removed in a future release. Please use %s instead.

ER_DEPRECATED_SYNTAX_WITH_REPLACEMENT was added in 8.0.11.

- Error: 11069 SQLSTATE: HY000 (ER_DEPRECATED_SYNTAX_NO_REPLACEMENT)

  Message: The syntax '%s' is deprecated and will be removed in a future release.

  ER_DEPRECATED_SYNTAX_NO_REPLACEMENT was added in 8.0.11.

- Error: 11070 SQLSTATE: HY000 (ER_DEPRECATE_MSG_NO_REPLACEMENT)

  Message: '%s' is deprecated and will be removed in a future release.

  ER_DEPRECATE_MSG_NO_REPLACEMENT was added in 8.0.11.

- Error: 11071 SQLSTATE: HY000 (ER_LOG_PRINTF_MSG)

  Message: %s

  ER_LOG_PRINTF_MSG was added in 8.0.11.

- Error: 11072 SQLSTATE: HY000 (ER_BINLOG_LOGGING_NOT_POSSIBLE)

  Message: Binary logging not possible. Message: %s.

  ER_BINLOG_LOGGING_NOT_POSSIBLE was added in 8.0.11.

- Error: 11073 SQLSTATE: HY000 (ER_FAILED_TO_SET_PERSISTED_OPTIONS)

  Message: Failed to set persisted options.

  ER_FAILED_TO_SET_PERSISTED_OPTIONS was added in 8.0.11.

- Error: 11074 SQLSTATE: HY000 (ER_COMPONENTS_FAILED_TO_ACQUIRE_SERVICE_IMPLEMENTATION)

  Message: Cannot acquire specified service implementation: '%s'.

  ER_COMPONENTS_FAILED_TO_ACQUIRE_SERVICE_IMPLEMENTATION was added in 8.0.11.

- Error: 11075 SQLSTATE: HY000 (ER_RES_GRP_INVALID_VCPU_RANGE)

  Message: Invalid VCPU range %u-%u.

  ER_RES_GRP_INVALID_VCPU_RANGE was added in 8.0.11.

- Error: 11076 SQLSTATE: HY000 (ER_RES_GRP_INVALID_VCPU_ID)

  Message: Invalid cpu id %u.

  ER_RES_GRP_INVALID_VCPU_ID was added in 8.0.11.

- Error: 11077 SQLSTATE: HY000 (ER_ERROR_DURING_FLUSH_LOG_COMMIT_PHASE)

  Message: Got error %d during FLUSH_LOGS.

  ER_ERROR_DURING_FLUSH_LOG_COMMIT_PHASE was added in 8.0.11.

- Error: 11078 SQLSTATE: HY000 (ER_DROP_DATABASE_FAILED_RMDIR_MANUALLY)

  Message: Problem while dropping database. Can't remove database directory (%s). Please remove it manually.

  ER_DROP_DATABASE_FAILED_RMDIR_MANUALLY was added in 8.0.11.

- Error: 11079 SQLSTATE: HY000 (ER_EXPIRE_LOGS_DAYS_IGNORED)

  Message: The option expire_logs_days cannot be used together with option binlog_expire_logs_seconds. Therefore, value of expire_logs_days is ignored.

  ER_EXPIRE_LOGS_DAYS_IGNORED was added in 8.0.11.

- Error: 11080 SQLSTATE: HY000 (ER_BINLOG_MALFORMED_OR_OLD_RELAY_LOG)

  Message: malformed or very old relay log which does not have FormatDescriptor.

  ER_BINLOG_MALFORMED_OR_OLD_RELAY_LOG was added in 8.0.11.

- Error: 11081 SQLSTATE: HY000 (ER_DD_UPGRADE_VIEW_COLUMN_NAME_TOO_LONG)

  Message: Upgrade of view '%s.%s' failed. Re-create the view with the explicit column name lesser than 64 characters.

  ER_DD_UPGRADE_VIEW_COLUMN_NAME_TOO_LONG was added in 8.0.11.

- Error: 11082 SQLSTATE: HY000 (ER_TABLE_NEEDS_DUMP_UPGRADE)

  Message: Table upgrade required for `%s`.`%s`. Please dump/reload table to fix it!

  ER_TABLE_NEEDS_DUMP_UPGRADE was added in 8.0.11.

- Error: 11083 SQLSTATE: HY000 (ER_DD_UPGRADE_FAILED_TO_UPDATE_VER_NO_IN_TABLESPACE)

  Message: Error in updating version number in %s tablespace.

  ER_DD_UPGRADE_FAILED_TO_UPDATE_VER_NO_IN_TABLESPACE was added in 8.0.11.

- Error: 11084 SQLSTATE: HY000 (ER_KEYRING_MIGRATION_FAILED)

  Message: Keyring migration failed.

  ER_KEYRING_MIGRATION_FAILED was added in 8.0.11.

- Error: 11085 SQLSTATE: HY000 (ER_KEYRING_MIGRATION_SUCCESSFUL)

  Message: Keyring migration successful.

  ER_KEYRING_MIGRATION_SUCCESSFUL was added in 8.0.11.

- Error: 11086 SQLSTATE: HY000 (ER_RESTART_RECEIVED_INFO)

  Message: Received RESTART from user %s. Restarting mysqld (Version: %s).

  ER_RESTART_RECEIVED_INFO was added in 8.0.11.

- Error: 11087 SQLSTATE: HY000 (ER_LCTN_CHANGED)

  Message: Different lower_case_table_names settings for server ('%u') and data dictionary ('%u').

  ER_LCTN_CHANGED was added in 8.0.11.

- Error: 11088 SQLSTATE: HY000 (ER_DD_INITIALIZE)

  Message: Data dictionary initializing version '%u'.

  ER_DD_INITIALIZE was added in 8.0.11.

- Error: 11089 SQLSTATE: HY000 (ER_DD_RESTART)

Message: Data dictionary restarting version '%u'.

`ER_DD_RESTART` was added in 8.0.11.

- Error: `11090` SQLSTATE: `HY000` (`ER_DD_UPGRADE`)

  Message: Data dictionary upgrading from version '%u' to '%u'.

  `ER_DD_UPGRADE` was added in 8.0.11.

- Error: `11091` SQLSTATE: `HY000` (`ER_DD_UPGRADE_OFF`)

  Message: Data dictionary upgrade prohibited by the command line option '--no_dd_upgrade'.

  `ER_DD_UPGRADE_OFF` was added in 8.0.11.

- Error: `11092` SQLSTATE: `HY000` (`ER_DD_UPGRADE_VERSION_NOT_SUPPORTED`)

  Message: Upgrading the data dictionary from dictionary version '%u' is not supported.

  `ER_DD_UPGRADE_VERSION_NOT_SUPPORTED` was added in 8.0.11.

- Error: `11093` SQLSTATE: `HY000` (`ER_DD_UPGRADE_SCHEMA_UNAVAILABLE`)

  Message: Upgrading the data dictionary failed, temporary schema name '%s' not available.

  `ER_DD_UPGRADE_SCHEMA_UNAVAILABLE` was added in 8.0.11.

- Error: `11094` SQLSTATE: `HY000` (`ER_DD_MINOR_DOWNGRADE`)

  Message: Data dictionary minor downgrade from version '%u' to '%u'.

  `ER_DD_MINOR_DOWNGRADE` was added in 8.0.11.

- Error: `11095` SQLSTATE: `HY000` (`ER_DD_MINOR_DOWNGRADE_VERSION_NOT_SUPPORTED`)

  Message: Minor downgrade of the Data dictionary from dictionary version '%u' is not supported.

  `ER_DD_MINOR_DOWNGRADE_VERSION_NOT_SUPPORTED` was added in 8.0.11.

- Error: `11096` SQLSTATE: `HY000` (`ER_DD_NO_VERSION_FOUND`)

  Message: No data dictionary version number found.

  `ER_DD_NO_VERSION_FOUND` was added in 8.0.11.

- Error: `11097` SQLSTATE: `HY000` (`ER_THREAD_POOL_NOT_SUPPORTED_ON_PLATFORM`)

  Message: Thread pool not supported, requires a minimum of %s.

  `ER_THREAD_POOL_NOT_SUPPORTED_ON_PLATFORM` was added in 8.0.11.

- Error: `11098` SQLSTATE: `HY000` (`ER_THREAD_POOL_SIZE_TOO_LOW`)

  Message: thread_pool_size=0 means thread pool disabled, Allowed range of thread_pool_size is %d-%d.

  `ER_THREAD_POOL_SIZE_TOO_LOW` was added in 8.0.11.

- Error: `11099` SQLSTATE: `HY000` (`ER_THREAD_POOL_SIZE_TOO_HIGH`)

  Message: thread_pool_size=%lu is too high, %d is maximum, thread pool is disabled. Allowed range of thread_pool_size is %d-%d.

ER_THREAD_POOL_SIZE_TOO_HIGH was added in 8.0.11.

- Error: 11100 SQLSTATE: HY000 (ER_THREAD_POOL_ALGORITHM_INVALID)

  Message: thread_pool_algorithm can be set to 0 and 1, 0 indicates the default low concurrency algorithm, 1 means a high concurrency algorithm.

  ER_THREAD_POOL_ALGORITHM_INVALID was added in 8.0.11.

- Error: 11101 SQLSTATE: HY000 (ER_THREAD_POOL_INVALID_STALL_LIMIT)

  Message: thread_pool_stall_limit can be %d at minimum and %d at maximum, smaller values would render the thread pool fairly useless and higher values could make it possible to have undetected deadlock issues in the MySQL Server.

  ER_THREAD_POOL_INVALID_STALL_LIMIT was added in 8.0.11.

- Error: 11102 SQLSTATE: HY000 (ER_THREAD_POOL_INVALID_PRIO_KICKUP_TIMER)

  Message: Invalid value of thread_pool_prio_kickup_timer specified. Value of thread_pool_prio_kickup_timer should be in range 0-4294967294.

  ER_THREAD_POOL_INVALID_PRIO_KICKUP_TIMER was added in 8.0.11.

- Error: 11103 SQLSTATE: HY000 (ER_THREAD_POOL_MAX_UNUSED_THREADS_INVALID)

  Message: thread_pool_max_unused_threads cannot be set higher than %d.

  ER_THREAD_POOL_MAX_UNUSED_THREADS_INVALID was added in 8.0.11.

- Error: 11104 SQLSTATE: HY000 (ER_THREAD_POOL_CON_HANDLER_INIT_FAILED)

  Message: Failed to instantiate the connection handler object.

  ER_THREAD_POOL_CON_HANDLER_INIT_FAILED was added in 8.0.11.

- Error: 11105 SQLSTATE: HY000 (ER_THREAD_POOL_INIT_FAILED)

  Message: Failed to initialize thread pool plugin.

  ER_THREAD_POOL_INIT_FAILED was added in 8.0.11.

- Error: 11106 SQLSTATE: HY000 (ER_THREAD_POOL_PLUGIN_STARTED)

  Message: Thread pool plugin started successfully with parameters: thread_pool_size = %lu, thread_pool_algorithm = %s, thread_pool_stall_limit = %u, thread_pool_prio_kickup_timer = %u, thread_pool_max_unused_threads = %u, thread_pool_high_priority_connection = %d.

  ER_THREAD_POOL_PLUGIN_STARTED was added in 8.0.11.

- Error: 11107 SQLSTATE: HY000 (ER_THREAD_POOL_CANNOT_SET_THREAD_SPECIFIC_DATA)

  Message: Can't setup connection teardown thread-specific data.

  ER_THREAD_POOL_CANNOT_SET_THREAD_SPECIFIC_DATA was added in 8.0.11.

- Error: 11108 SQLSTATE: HY000 (ER_THREAD_POOL_FAILED_TO_CREATE_CONNECT_HANDLER_THD)

  Message: Creation of connect handler thread failed.

  ER_THREAD_POOL_FAILED_TO_CREATE_CONNECT_HANDLER_THD was added in 8.0.11.

- Error: 11109 SQLSTATE: HY000 (ER_THREAD_POOL_FAILED_TO_CREATE_THD_AND_AUTH_CONN)

  Message: Failed to create thd and authenticate connection.

  ER_THREAD_POOL_FAILED_TO_CREATE_THD_AND_AUTH_CONN was added in 8.0.11.

- Error: 11110 SQLSTATE: HY000 (ER_THREAD_POOL_FAILED_PROCESS_CONNECT_EVENT)

  Message: Failed to process connection event.

  ER_THREAD_POOL_FAILED_PROCESS_CONNECT_EVENT was added in 8.0.11.

- Error: 11111 SQLSTATE: HY000 (ER_THREAD_POOL_FAILED_TO_CREATE_POOL)

  Message: Can't create pool thread (error %d, errno: %d).

  ER_THREAD_POOL_FAILED_TO_CREATE_POOL was added in 8.0.11.

- Error: 11112 SQLSTATE: HY000 (ER_THREAD_POOL_RATE_LIMITED_ERROR_MSGS)

  Message: %.*s.

  ER_THREAD_POOL_RATE_LIMITED_ERROR_MSGS was added in 8.0.11.

- Error: 11113 SQLSTATE: HY000 (ER_TRHEAD_POOL_LOW_LEVEL_INIT_FAILED)

  Message: tp_group_low_level_init() failed.

  ER_TRHEAD_POOL_LOW_LEVEL_INIT_FAILED was added in 8.0.11.

- Error: 11114 SQLSTATE: HY000 (ER_THREAD_POOL_LOW_LEVEL_REARM_FAILED)

  Message: Rearm failed even after 30 seconds, can't continue without notify socket.

  ER_THREAD_POOL_LOW_LEVEL_REARM_FAILED was added in 8.0.11.

- Error: 11115 SQLSTATE: HY000 (ER_THREAD_POOL_BUFFER_TOO_SMALL)

  Message: %s: %s buffer is too small

  ER_THREAD_POOL_BUFFER_TOO_SMALL was added in 8.0.11.

- Error: 11116 SQLSTATE: HY000 (ER_MECAB_NOT_SUPPORTED)

  Message: Mecab v%s is not supported, the lowest version supported is v%s.

  ER_MECAB_NOT_SUPPORTED was added in 8.0.11.

- Error: 11117 SQLSTATE: HY000 (ER_MECAB_NOT_VERIFIED)

  Message: Mecab v%s is not verified, the highest version supported is v%s.

  ER_MECAB_NOT_VERIFIED was added in 8.0.11.

- Error: 11118 SQLSTATE: HY000 (ER_MECAB_CREATING_MODEL)

  Message: Mecab: Trying createModel(%s).

  ER_MECAB_CREATING_MODEL was added in 8.0.11.

- Error: 11119 SQLSTATE: HY000 (ER_MECAB_FAILED_TO_CREATE_MODEL)

  Message: Mecab: createModel() failed: %s.

ER_MECAB_FAILED_TO_CREATE_MODEL was added in 8.0.11.

- Error: 11120 SQLSTATE: HY000 (ER_MECAB_FAILED_TO_CREATE_TRIGGER)

  Message: Mecab: createTagger() failed: %s.

  ER_MECAB_FAILED_TO_CREATE_TRIGGER was added in 8.0.11.

- Error: 11121 SQLSTATE: HY000 (ER_MECAB_UNSUPPORTED_CHARSET)

  Message: Mecab: Unsupported dictionary charset %s.

  ER_MECAB_UNSUPPORTED_CHARSET was added in 8.0.11.

- Error: 11122 SQLSTATE: HY000 (ER_MECAB_CHARSET_LOADED)

  Message: Mecab: Loaded dictionary charset is %s.

  ER_MECAB_CHARSET_LOADED was added in 8.0.11.

- Error: 11123 SQLSTATE: HY000 (ER_MECAB_PARSE_FAILED)

  Message: Mecab: parse() failed: %s.

  ER_MECAB_PARSE_FAILED was added in 8.0.11.

- Error: 11124 SQLSTATE: HY000 (ER_MECAB_OOM_WHILE_PARSING_TEXT)

  Message: Mecab: parse() failed: out of memory.

  ER_MECAB_OOM_WHILE_PARSING_TEXT was added in 8.0.11.

- Error: 11125 SQLSTATE: HY000 (ER_MECAB_CREATE_LATTICE_FAILED)

  Message: Mecab: createLattice() failed: %s.

  ER_MECAB_CREATE_LATTICE_FAILED was added in 8.0.11.

- Error: 11126 SQLSTATE: HY000 (ER_SEMISYNC_TRACE_ENTER_FUNC)

  Message: ---> %s enter.

  ER_SEMISYNC_TRACE_ENTER_FUNC was added in 8.0.11.

- Error: 11127 SQLSTATE: HY000 (ER_SEMISYNC_TRACE_EXIT_WITH_INT_EXIT_CODE)

  Message: <--- %s exit (%d).

  ER_SEMISYNC_TRACE_EXIT_WITH_INT_EXIT_CODE was added in 8.0.11.

- Error: 11128 SQLSTATE: HY000 (ER_SEMISYNC_TRACE_EXIT_WITH_BOOL_EXIT_CODE)

  Message: <--- %s exit (%s).

  ER_SEMISYNC_TRACE_EXIT_WITH_BOOL_EXIT_CODE was added in 8.0.11.

- Error: 11129 SQLSTATE: HY000 (ER_SEMISYNC_TRACE_EXIT)

  Message: <--- %s exit.

  ER_SEMISYNC_TRACE_EXIT was added in 8.0.11.

- Error: 11130 SQLSTATE: HY000 (ER_SEMISYNC_RPL_INIT_FOR_TRX)

Message: Semi-sync replication initialized for transactions.

ER_SEMISYNC_RPL_INIT_FOR_TRX was added in 8.0.11.

- Error: 11131 SQLSTATE: HY000 (ER_SEMISYNC_FAILED_TO_ALLOCATE_TRX_NODE)

  Message: %s: transaction node allocation failed for: (%s, %lu).

  ER_SEMISYNC_FAILED_TO_ALLOCATE_TRX_NODE was added in 8.0.11.

- Error: 11132 SQLSTATE: HY000 (ER_SEMISYNC_BINLOG_WRITE_OUT_OF_ORDER)

  Message: %s: binlog write out-of-order, tail (%s, %lu), new node (%s, %lu).

  ER_SEMISYNC_BINLOG_WRITE_OUT_OF_ORDER was added in 8.0.11.

- Error: 11133 SQLSTATE: HY000 (ER_SEMISYNC_INSERT_LOG_INFO_IN_ENTRY)

  Message: %s: insert (%s, %lu) in entry(%u).

  ER_SEMISYNC_INSERT_LOG_INFO_IN_ENTRY was added in 8.0.11.

- Error: 11134 SQLSTATE: HY000 (ER_SEMISYNC_PROBE_LOG_INFO_IN_ENTRY)

  Message: %s: probe (%s, %lu) in entry(%u).

  ER_SEMISYNC_PROBE_LOG_INFO_IN_ENTRY was added in 8.0.11.

- Error: 11135 SQLSTATE: HY000 (ER_SEMISYNC_CLEARED_ALL_ACTIVE_TRANSACTION_NODES)

  Message: %s: cleared all nodes.

  ER_SEMISYNC_CLEARED_ALL_ACTIVE_TRANSACTION_NODES was added in 8.0.11.

- Error: 11136 SQLSTATE: HY000 (ER_SEMISYNC_CLEARED_ACTIVE_TRANSACTION_TILL_POS)

  Message: %s: cleared %d nodes back until pos (%s, %lu).

  ER_SEMISYNC_CLEARED_ACTIVE_TRANSACTION_TILL_POS was added in 8.0.11.

- Error: 11137 SQLSTATE: HY000 (ER_SEMISYNC_REPLY_MAGIC_NO_ERROR)

  Message: Read semi-sync reply magic number error.

  ER_SEMISYNC_REPLY_MAGIC_NO_ERROR was added in 8.0.11.

- Error: 11138 SQLSTATE: HY000 (ER_SEMISYNC_REPLY_PKT_LENGTH_TOO_SMALL)

  Message: Read semi-sync reply length error: packet is too small.

  ER_SEMISYNC_REPLY_PKT_LENGTH_TOO_SMALL was added in 8.0.11.

- Error: 11139 SQLSTATE: HY000 (ER_SEMISYNC_REPLY_BINLOG_FILE_TOO_LARGE)

  Message: Read semi-sync reply binlog file length too large.

  ER_SEMISYNC_REPLY_BINLOG_FILE_TOO_LARGE was added in 8.0.11.

- Error: 11140 SQLSTATE: HY000 (ER_SEMISYNC_SERVER_REPLY)

  Message: %s: Got reply(%s, %lu) from server %u.

  ER_SEMISYNC_SERVER_REPLY was added in 8.0.11.

- Error: 11141 SQLSTATE: HY000 (ER_SEMISYNC_FUNCTION_CALLED_TWICE)

  Message: %s called twice.

  ER_SEMISYNC_FUNCTION_CALLED_TWICE was added in 8.0.11.
- Error: 11142 SQLSTATE: HY000 (ER_SEMISYNC_RPL_ENABLED_ON_MASTER)

  Message: Semi-sync replication enabled on the master.

  ER_SEMISYNC_RPL_ENABLED_ON_MASTER was added in 8.0.11.
- Error: 11143 SQLSTATE: HY000 (ER_SEMISYNC_MASTER_OOM)

  Message: Cannot allocate memory to enable semi-sync on the master.

  ER_SEMISYNC_MASTER_OOM was added in 8.0.11.
- Error: 11144 SQLSTATE: HY000 (ER_SEMISYNC_DISABLED_ON_MASTER)

  Message: Semi-sync replication disabled on the master.

  ER_SEMISYNC_DISABLED_ON_MASTER was added in 8.0.11.
- Error: 11145 SQLSTATE: HY000 (ER_SEMISYNC_FORCED_SHUTDOWN)

  Message: SEMISYNC: Forced shutdown. Some updates might not be replicated.

  ER_SEMISYNC_FORCED_SHUTDOWN was added in 8.0.11.
- Error: 11146 SQLSTATE: HY000 (ER_SEMISYNC_MASTER_GOT_REPLY_AT_POS)

  Message: %s: Got reply at (%s, %lu).

  ER_SEMISYNC_MASTER_GOT_REPLY_AT_POS was added in 8.0.11.
- Error: 11147 SQLSTATE: HY000 (ER_SEMISYNC_MASTER_SIGNAL_ALL_WAITING_THREADS)

  Message: %s: signal all waiting threads.

  ER_SEMISYNC_MASTER_SIGNAL_ALL_WAITING_THREADS was added in 8.0.11.
- Error: 11148 SQLSTATE: HY000 (ER_SEMISYNC_MASTER_TRX_WAIT_POS)

  Message: %s: wait pos (%s, %lu), repl(%d).

  ER_SEMISYNC_MASTER_TRX_WAIT_POS was added in 8.0.11.
- Error: 11149 SQLSTATE: HY000 (ER_SEMISYNC_BINLOG_REPLY_IS_AHEAD)

  Message: %s: Binlog reply is ahead (%s, %lu).

  ER_SEMISYNC_BINLOG_REPLY_IS_AHEAD was added in 8.0.11.
- Error: 11150 SQLSTATE: HY000 (ER_SEMISYNC_MOVE_BACK_WAIT_POS)

  Message: %s: move back wait position (%s, %lu).

  ER_SEMISYNC_MOVE_BACK_WAIT_POS was added in 8.0.11.
- Error: 11151 SQLSTATE: HY000 (ER_SEMISYNC_INIT_WAIT_POS)

  Message: %s: init wait position (%s, %lu).

  ER_SEMISYNC_INIT_WAIT_POS was added in 8.0.11.

- Error: 11152 SQLSTATE: HY000 (ER_SEMISYNC_WAIT_TIME_FOR_BINLOG_SENT)

  Message: %s: wait %lu ms for binlog sent (%s, %lu).

  ER_SEMISYNC_WAIT_TIME_FOR_BINLOG_SENT was added in 8.0.11.

- Error: 11153 SQLSTATE: HY000 (ER_SEMISYNC_WAIT_FOR_BINLOG_TIMEDOUT)

  Message: Timeout waiting for reply of binlog (file: %s, pos: %lu), semi-sync up to file %s, position %lu.

  ER_SEMISYNC_WAIT_FOR_BINLOG_TIMEDOUT was added in 8.0.11.

- Error: 11154 SQLSTATE: HY000 (ER_SEMISYNC_WAIT_TIME_ASSESSMENT_FOR_COMMIT_TRX_FAILED)

  Message: Assessment of waiting time for commitTrx failed at wait position (%s, %lu).

  ER_SEMISYNC_WAIT_TIME_ASSESSMENT_FOR_COMMIT_TRX_FAILED was added in 8.0.11.

- Error: 11155 SQLSTATE: HY000 (ER_SEMISYNC_RPL_SWITCHED_OFF)

  Message: Semi-sync replication switched OFF.

  ER_SEMISYNC_RPL_SWITCHED_OFF was added in 8.0.11.

- Error: 11156 SQLSTATE: HY000 (ER_SEMISYNC_RPL_SWITCHED_ON)

  Message: Semi-sync replication switched ON at (%s, %lu).

  ER_SEMISYNC_RPL_SWITCHED_ON was added in 8.0.11.

- Error: 11157 SQLSTATE: HY000 (ER_SEMISYNC_NO_SPACE_IN_THE_PKT)

  Message: No enough space in the packet for semi-sync extra header, semi-sync replication disabled.

  ER_SEMISYNC_NO_SPACE_IN_THE_PKT was added in 8.0.11.

- Error: 11158 SQLSTATE: HY000 (ER_SEMISYNC_SYNC_HEADER_UPDATE_INFO)

  Message: %s: server(%d), (%s, %lu) sync(%d), repl(%d).

  ER_SEMISYNC_SYNC_HEADER_UPDATE_INFO was added in 8.0.11.

- Error: 11159 SQLSTATE: HY000 (ER_SEMISYNC_FAILED_TO_INSERT_TRX_NODE)

  Message: Semi-sync failed to insert tranx_node for binlog file: %s, position: %lu.

  ER_SEMISYNC_FAILED_TO_INSERT_TRX_NODE was added in 8.0.11.

- Error: 11160 SQLSTATE: HY000 (ER_SEMISYNC_TRX_SKIPPED_AT_POS)

  Message: %s: Transaction skipped at (%s, %lu).

  ER_SEMISYNC_TRX_SKIPPED_AT_POS was added in 8.0.11.

- Error: 11161 SQLSTATE: HY000 (ER_SEMISYNC_MASTER_FAILED_ON_NET_FLUSH)

  Message: Semi-sync master failed on net_flush() before waiting for slave reply.

  ER_SEMISYNC_MASTER_FAILED_ON_NET_FLUSH was added in 8.0.11.

- Error: 11162 SQLSTATE: HY000 (ER_SEMISYNC_RECEIVED_ACK_IS_SMALLER)

Message: The received ack is smaller than m_greatest_ack.

ER_SEMISYNC_RECEIVED_ACK_IS_SMALLER was added in 8.0.11.

- Error: 11163 SQLSTATE: HY000 (ER_SEMISYNC_ADD_ACK_TO_SLOT)

  Message: Add the ack into slot %u.

  ER_SEMISYNC_ADD_ACK_TO_SLOT was added in 8.0.11.

- Error: 11164 SQLSTATE: HY000 (ER_SEMISYNC_UPDATE_EXISTING_SLAVE_ACK)

  Message: Update an exsiting ack in slot %u.

  ER_SEMISYNC_UPDATE_EXISTING_SLAVE_ACK was added in 8.0.11.

- Error: 11165 SQLSTATE: HY000 (ER_SEMISYNC_FAILED_TO_START_ACK_RECEIVER_THD)

  Message: Failed to start semi-sync ACK receiver thread, could not create thread(errno:%d).

  ER_SEMISYNC_FAILED_TO_START_ACK_RECEIVER_THD was added in 8.0.11.

- Error: 11166 SQLSTATE: HY000 (ER_SEMISYNC_STARTING_ACK_RECEIVER_THD)

  Message: Starting ack receiver thread.

  ER_SEMISYNC_STARTING_ACK_RECEIVER_THD was added in 8.0.11.

- Error: 11167 SQLSTATE: HY000 (ER_SEMISYNC_FAILED_TO_WAIT_ON_DUMP_SOCKET)

  Message: Failed to wait on semi-sync dump sockets, error: errno=%d.

  ER_SEMISYNC_FAILED_TO_WAIT_ON_DUMP_SOCKET was added in 8.0.11.

- Error: 11168 SQLSTATE: HY000 (ER_SEMISYNC_STOPPING_ACK_RECEIVER_THREAD)

  Message: Stopping ack receiver thread.

  ER_SEMISYNC_STOPPING_ACK_RECEIVER_THREAD was added in 8.0.11.

- Error: 11169 SQLSTATE: HY000 (ER_SEMISYNC_FAILED_REGISTER_SLAVE_TO_RECEIVER)

  Message: Failed to register slave to semi-sync ACK receiver thread.

  ER_SEMISYNC_FAILED_REGISTER_SLAVE_TO_RECEIVER was added in 8.0.11.

- Error: 11170 SQLSTATE: HY000 (ER_SEMISYNC_START_BINLOG_DUMP_TO_SLAVE)

  Message: Start %s binlog_dump to slave (server_id: %d), pos(%s, %lu).

  ER_SEMISYNC_START_BINLOG_DUMP_TO_SLAVE was added in 8.0.11.

- Error: 11171 SQLSTATE: HY000 (ER_SEMISYNC_STOP_BINLOG_DUMP_TO_SLAVE)

  Message: Stop %s binlog_dump to slave (server_id: %d).

  ER_SEMISYNC_STOP_BINLOG_DUMP_TO_SLAVE was added in 8.0.11.

- Error: 11172 SQLSTATE: HY000 (ER_SEMISYNC_UNREGISTER_TRX_OBSERVER_FAILED)

  Message: unregister_trans_observer failed.

  ER_SEMISYNC_UNREGISTER_TRX_OBSERVER_FAILED was added in 8.0.11.

- Error: 11173 SQLSTATE: HY000 (ER_SEMISYNC_UNREGISTER_BINLOG_STORAGE_OBSERVER_FAILED)

  Message: unregister_binlog_storage_observer failed.

  ER_SEMISYNC_UNREGISTER_BINLOG_STORAGE_OBSERVER_FAILED was added in 8.0.11.

- Error: 11174 SQLSTATE: HY000 (ER_SEMISYNC_UNREGISTER_BINLOG_TRANSMIT_OBSERVER_FAILED)

  Message: unregister_binlog_transmit_observer failed.

  ER_SEMISYNC_UNREGISTER_BINLOG_TRANSMIT_OBSERVER_FAILED was added in 8.0.11.

- Error: 11175 SQLSTATE: HY000 (ER_SEMISYNC_UNREGISTERED_REPLICATOR)

  Message: unregister_replicator OK.

  ER_SEMISYNC_UNREGISTERED_REPLICATOR was added in 8.0.11.

- Error: 11176 SQLSTATE: HY000 (ER_SEMISYNC_SOCKET_FD_TOO_LARGE)

  Message: Semisync slave socket fd is %u. select() cannot handle if the socket fd is bigger than %u (FD_SETSIZE).

  ER_SEMISYNC_SOCKET_FD_TOO_LARGE was added in 8.0.11.

- Error: 11177 SQLSTATE: HY000 (ER_SEMISYNC_SLAVE_REPLY)

  Message: %s: reply - %d.

  ER_SEMISYNC_SLAVE_REPLY was added in 8.0.11.

- Error: 11178 SQLSTATE: HY000 (ER_SEMISYNC_MISSING_MAGIC_NO_FOR_SEMISYNC_PKT)

  Message: Missing magic number for semi-sync packet, packet len: %lu.

  ER_SEMISYNC_MISSING_MAGIC_NO_FOR_SEMISYNC_PKT was added in 8.0.11.

- Error: 11179 SQLSTATE: HY000 (ER_SEMISYNC_SLAVE_START)

  Message: Slave I/O thread: Start %s replication to master '%s@%s:%d' in log '%s' at position %lu.

  ER_SEMISYNC_SLAVE_START was added in 8.0.11.

- Error: 11180 SQLSTATE: HY000 (ER_SEMISYNC_SLAVE_REPLY_WITH_BINLOG_INFO)

  Message: %s: reply (%s, %lu).

  ER_SEMISYNC_SLAVE_REPLY_WITH_BINLOG_INFO was added in 8.0.11.

- Error: 11181 SQLSTATE: HY000 (ER_SEMISYNC_SLAVE_NET_FLUSH_REPLY_FAILED)

  Message: Semi-sync slave net_flush() reply failed.

  ER_SEMISYNC_SLAVE_NET_FLUSH_REPLY_FAILED was added in 8.0.11.

- Error: 11182 SQLSTATE: HY000 (ER_SEMISYNC_SLAVE_SEND_REPLY_FAILED)

  Message: Semi-sync slave send reply failed: %s (%d).

  ER_SEMISYNC_SLAVE_SEND_REPLY_FAILED was added in 8.0.11.

- Error: 11183 SQLSTATE: HY000 (ER_SEMISYNC_EXECUTION_FAILED_ON_MASTER)

Message: Execution failed on master: %s; error %d

ER_SEMISYNC_EXECUTION_FAILED_ON_MASTER was added in 8.0.11.

- Error: 11184 SQLSTATE: HY000 (ER_SEMISYNC_NOT_SUPPORTED_BY_MASTER)

  Message: Master server does not support semi-sync, fallback to asynchronous replication

  ER_SEMISYNC_NOT_SUPPORTED_BY_MASTER was added in 8.0.11.

- Error: 11185 SQLSTATE: HY000 (ER_SEMISYNC_SLAVE_SET_FAILED)

  Message: Set 'rpl_semi_sync_slave=1' on master failed

  ER_SEMISYNC_SLAVE_SET_FAILED was added in 8.0.11.

- Error: 11186 SQLSTATE: HY000 (ER_SEMISYNC_FAILED_TO_STOP_ACK_RECEIVER_THD)

  Message: Failed to stop ack receiver thread on my_thread_join, errno(%d).

  ER_SEMISYNC_FAILED_TO_STOP_ACK_RECEIVER_THD was added in 8.0.11.

- Error: 11187 SQLSTATE: HY000 (ER_FIREWALL_FAILED_TO_READ_FIREWALL_TABLES)

  Message: Failed to read the firewall tables

  ER_FIREWALL_FAILED_TO_READ_FIREWALL_TABLES was added in 8.0.11.

- Error: 11188 SQLSTATE: HY000 (ER_FIREWALL_FAILED_TO_REG_DYNAMIC_PRIVILEGES)

  Message: Failed to register dynamic privileges

  ER_FIREWALL_FAILED_TO_REG_DYNAMIC_PRIVILEGES was added in 8.0.11.

- Error: 11189 SQLSTATE: HY000 (ER_FIREWALL_RECORDING_STMT_WAS_TRUNCATED)

  Message: Statement was truncated and not recorded: %s

  ER_FIREWALL_RECORDING_STMT_WAS_TRUNCATED was added in 8.0.11.

- Error: 11190 SQLSTATE: HY000 (ER_FIREWALL_RECORDING_STMT_WITHOUT_TEXT)

  Message: Statement with no text was not recorded

  ER_FIREWALL_RECORDING_STMT_WITHOUT_TEXT was added in 8.0.11.

- Error: 11191 SQLSTATE: HY000 (ER_FIREWALL_SUSPICIOUS_STMT)

  Message: SUSPICIOUS STATEMENT from '%s'. Reason: %s Statement: %s

  ER_FIREWALL_SUSPICIOUS_STMT was added in 8.0.11.

- Error: 11192 SQLSTATE: HY000 (ER_FIREWALL_ACCESS_DENIED)

  Message: ACCESS DENIED for '%s'. Reason: %s Statement: %s

  ER_FIREWALL_ACCESS_DENIED was added in 8.0.11.

- Error: 11193 SQLSTATE: HY000 (ER_FIREWALL_SKIPPED_UNKNOWN_USER_MODE)

  Message: Skipped unknown user mode '%s'

  ER_FIREWALL_SKIPPED_UNKNOWN_USER_MODE was added in 8.0.11.

- Error: 11194 SQLSTATE: HY000 (ER_FIREWALL_RELOADING_CACHE)

  Message: Reloading cache from disk

  ER_FIREWALL_RELOADING_CACHE was added in 8.0.11.

- Error: 11195 SQLSTATE: HY000 (ER_FIREWALL_RESET_FOR_USER)

  Message: FIREWALL RESET for '%s'

  ER_FIREWALL_RESET_FOR_USER was added in 8.0.11.

- Error: 11196 SQLSTATE: HY000 (ER_FIREWALL_STATUS_FLUSHED)

  Message: Counters are reset to zero

  ER_FIREWALL_STATUS_FLUSHED was added in 8.0.11.

- Error: 11197 SQLSTATE: HY000 (ER_KEYRING_LOGGER_ERROR_MSG)

  Message: %s

  ER_KEYRING_LOGGER_ERROR_MSG was added in 8.0.11.

- Error: 11198 SQLSTATE: HY000 (ER_AUDIT_LOG_FILTER_IS_NOT_INSTALLED)

  Message: Audit Log plugin supports a filtering, which has not been installed yet. Audit Log plugin will run in the legacy mode, which will be disabled in the next release.

  ER_AUDIT_LOG_FILTER_IS_NOT_INSTALLED was added in 8.0.11.

- Error: 11199 SQLSTATE: HY000 (ER_AUDIT_LOG_SWITCHING_TO_INCLUDE_LIST)

  Message: Previously exclude list is used, now we start using include list, exclude list is set to NULL.

  ER_AUDIT_LOG_SWITCHING_TO_INCLUDE_LIST was added in 8.0.11.

- Error: 11200 SQLSTATE: HY000 (ER_AUDIT_LOG_CANNOT_SET_LOG_POLICY_WITH_OTHER_POLICIES)

  Message: Cannot set audit_log_policy simultaneously with either audit_log_connection_policy or audit_log_statement_policy, setting audit_log_connection_policy and audit_log_statement_policy based on audit_log_policy.

  ER_AUDIT_LOG_CANNOT_SET_LOG_POLICY_WITH_OTHER_POLICIES was added in 8.0.11.

- Error: 11201 SQLSTATE: HY000 (ER_AUDIT_LOG_ONLY_INCLUDE_LIST_USED)

  Message: Both include and exclude lists provided, include list is preferred, exclude list is set to NULL.

  ER_AUDIT_LOG_ONLY_INCLUDE_LIST_USED was added in 8.0.11.

- Error: 11202 SQLSTATE: HY000 (ER_AUDIT_LOG_INDEX_MAP_CANNOT_ACCESS_DIR)

  Message: Could not access '%s' directory.

  ER_AUDIT_LOG_INDEX_MAP_CANNOT_ACCESS_DIR was added in 8.0.11.

- Error: 11203 SQLSTATE: HY000 (ER_AUDIT_LOG_WRITER_RENAME_FILE_FAILED)

  Message: Could not rename file from '%s' to '%s'.

  ER_AUDIT_LOG_WRITER_RENAME_FILE_FAILED was added in 8.0.11.

- Error: 11204 SQLSTATE: HY000 (ER_AUDIT_LOG_WRITER_DEST_FILE_ALREADY_EXISTS)

  Message: File '%s' should not exist. It may be incomplete. The server crashed.

  ER_AUDIT_LOG_WRITER_DEST_FILE_ALREADY_EXISTS was added in 8.0.11.

- Error: 11205 SQLSTATE: HY000 (ER_AUDIT_LOG_WRITER_RENAME_FILE_FAILED_REMOVE_FILE_MANUALLY)

  Message: Could not rename file from '%s' to '%s'. Remove the file manually.

  ER_AUDIT_LOG_WRITER_RENAME_FILE_FAILED_REMOVE_FILE_MANUALLY was added in 8.0.11.

- Error: 11206 SQLSTATE: HY000 (ER_AUDIT_LOG_WRITER_INCOMPLETE_FILE_RENAMED)

  Message: Incomplete file renamed from '%s' to '%s'.

  ER_AUDIT_LOG_WRITER_INCOMPLETE_FILE_RENAMED was added in 8.0.11.

- Error: 11207 SQLSTATE: HY000 (ER_AUDIT_LOG_WRITER_FAILED_TO_WRITE_TO_FILE)

  Message: Error writing file \'%s\' (errno: %d - %s).

  ER_AUDIT_LOG_WRITER_FAILED_TO_WRITE_TO_FILE was added in 8.0.11.

- Error: 11208 SQLSTATE: HY000 (ER_AUDIT_LOG_EC_WRITER_FAILED_TO_INIT_ENCRYPTION)

  Message: Could not initialize audit log file encryption.

  ER_AUDIT_LOG_EC_WRITER_FAILED_TO_INIT_ENCRYPTION was added in 8.0.11.

- Error: 11209 SQLSTATE: HY000 (ER_AUDIT_LOG_EC_WRITER_FAILED_TO_INIT_COMPRESSION)

  Message: Could not initialize audit log file compression.

  ER_AUDIT_LOG_EC_WRITER_FAILED_TO_INIT_COMPRESSION was added in 8.0.11.

- Error: 11210 SQLSTATE: HY000 (ER_AUDIT_LOG_EC_WRITER_FAILED_TO_CREATE_FILE)

  Message: Could not create '%s' file for audit logging.

  ER_AUDIT_LOG_EC_WRITER_FAILED_TO_CREATE_FILE was added in 8.0.11.

- Error: 11211 SQLSTATE: HY000 (ER_AUDIT_LOG_RENAME_LOG_FILE_BEFORE_FLUSH)

  Message: Audit log file (%s) must be manually renamed before audit_log_flush is set to true.

  ER_AUDIT_LOG_RENAME_LOG_FILE_BEFORE_FLUSH was added in 8.0.11.

- Error: 11212 SQLSTATE: HY000 (ER_AUDIT_LOG_FILTER_RESULT_MSG)

  Message: %s

  ER_AUDIT_LOG_FILTER_RESULT_MSG was added in 8.0.11.

- Error: 11213 SQLSTATE: HY000 (ER_AUDIT_LOG_JSON_READER_FAILED_TO_PARSE)

  Message: Error parsing JSON event. Event not accessible.

  ER_AUDIT_LOG_JSON_READER_FAILED_TO_PARSE was added in 8.0.11.

- Error: 11214 SQLSTATE: HY000 (ER_AUDIT_LOG_JSON_READER_BUF_TOO_SMALL)

  Message: Buffer is too small to hold JSON event. Number of events skipped: %zu.

  ER_AUDIT_LOG_JSON_READER_BUF_TOO_SMALL was added in 8.0.11.

- Error: 11215 SQLSTATE: HY000 (ER_AUDIT_LOG_JSON_READER_FAILED_TO_OPEN_FILE)

  Message: Could not open JSON file for reading. Reading next file if exists.

  ER_AUDIT_LOG_JSON_READER_FAILED_TO_OPEN_FILE was added in 8.0.11.

- Error: 11216 SQLSTATE: HY000 (ER_AUDIT_LOG_JSON_READER_FILE_PARSING_ERROR)

  Message: JSON file parsing error. Reading next file if exists

  ER_AUDIT_LOG_JSON_READER_FILE_PARSING_ERROR was added in 8.0.11.

- Error: 11217 SQLSTATE: HY000 (ER_AUDIT_LOG_FILTER_INVALID_COLUMN_COUNT)

  Message: Invalid column count in the '%s.%s' table.

  ER_AUDIT_LOG_FILTER_INVALID_COLUMN_COUNT was added in 8.0.11.

- Error: 11218 SQLSTATE: HY000 (ER_AUDIT_LOG_FILTER_INVALID_COLUMN_DEFINITION)

  Message: Invalid column definition of the '%s.%s' table.

  ER_AUDIT_LOG_FILTER_INVALID_COLUMN_DEFINITION was added in 8.0.11.

- Error: 11219 SQLSTATE: HY000 (ER_AUDIT_LOG_FILTER_FAILED_TO_STORE_TABLE_FLDS)

  Message: Could not store field of the %s table.

  ER_AUDIT_LOG_FILTER_FAILED_TO_STORE_TABLE_FLDS was added in 8.0.11.

- Error: 11220 SQLSTATE: HY000 (ER_AUDIT_LOG_FILTER_FAILED_TO_UPDATE_TABLE)

  Message: Could not update %s table.

  ER_AUDIT_LOG_FILTER_FAILED_TO_UPDATE_TABLE was added in 8.0.11.

- Error: 11221 SQLSTATE: HY000 (ER_AUDIT_LOG_FILTER_FAILED_TO_INSERT_INTO_TABLE)

  Message: Could not insert into %s table.

  ER_AUDIT_LOG_FILTER_FAILED_TO_INSERT_INTO_TABLE was added in 8.0.11.

- Error: 11222 SQLSTATE: HY000 (ER_AUDIT_LOG_FILTER_FAILED_TO_DELETE_FROM_TABLE)

  Message: Could not delete from %s table.

  ER_AUDIT_LOG_FILTER_FAILED_TO_DELETE_FROM_TABLE was added in 8.0.11.

- Error: 11223 SQLSTATE: HY000 (ER_AUDIT_LOG_FILTER_FAILED_TO_INIT_TABLE_FOR_READ)

  Message: Could not initialize %s table for reading.

  ER_AUDIT_LOG_FILTER_FAILED_TO_INIT_TABLE_FOR_READ was added in 8.0.11.

- Error: 11224 SQLSTATE: HY000 (ER_AUDIT_LOG_FILTER_FAILED_TO_READ_TABLE)

  Message: Could not read %s table.

ER_AUDIT_LOG_FILTER_FAILED_TO_READ_TABLE was added in 8.0.11.

- Error: 11225 SQLSTATE: HY000 (ER_AUDIT_LOG_FILTER_FAILED_TO_CLOSE_TABLE_AFTER_READING)

  Message: Could not close %s table reading.

  ER_AUDIT_LOG_FILTER_FAILED_TO_CLOSE_TABLE_AFTER_READING was added in 8.0.11.

- Error: 11226 SQLSTATE: HY000 (ER_AUDIT_LOG_FILTER_USER_AND_HOST_CANNOT_BE_EMPTY)

  Message: Both user and host columns of %s table cannot be empty.

  ER_AUDIT_LOG_FILTER_USER_AND_HOST_CANNOT_BE_EMPTY was added in 8.0.11.

- Error: 11227 SQLSTATE: HY000 (ER_AUDIT_LOG_FILTER_FLD_FILTERNAME_CANNOT_BE_EMPTY)

  Message: Filtername column of %s table cannot be empty.

  ER_AUDIT_LOG_FILTER_FLD_FILTERNAME_CANNOT_BE_EMPTY was added in 8.0.11.

- Error: 11228 SQLSTATE: HY000 (ER_VALIDATE_PWD_DICT_FILE_NOT_SPECIFIED)

  Message: Dictionary file not specified

  ER_VALIDATE_PWD_DICT_FILE_NOT_SPECIFIED was added in 8.0.11.

- Error: 11229 SQLSTATE: HY000 (ER_VALIDATE_PWD_DICT_FILE_NOT_LOADED)

  Message: Dictionary file not loaded

  ER_VALIDATE_PWD_DICT_FILE_NOT_LOADED was added in 8.0.11.

- Error: 11230 SQLSTATE: HY000 (ER_VALIDATE_PWD_DICT_FILE_TOO_BIG)

  Message: Dictionary file size exceeded MAX_DICTIONARY_FILE_LENGTH, not loaded

  ER_VALIDATE_PWD_DICT_FILE_TOO_BIG was added in 8.0.11.

- Error: 11231 SQLSTATE: HY000 (ER_VALIDATE_PWD_FAILED_TO_READ_DICT_FILE)

  Message: Exception while reading the dictionary file

  ER_VALIDATE_PWD_FAILED_TO_READ_DICT_FILE was added in 8.0.11.

- Error: 11232 SQLSTATE: HY000 (ER_VALIDATE_PWD_FAILED_TO_GET_FLD_FROM_SECURITY_CTX)

  Message: Can't retrieve the %s from the security context

  ER_VALIDATE_PWD_FAILED_TO_GET_FLD_FROM_SECURITY_CTX was added in 8.0.11.

- Error: 11233 SQLSTATE: HY000 (ER_VALIDATE_PWD_FAILED_TO_GET_SECURITY_CTX)

  Message: Can't retrieve the security context

  ER_VALIDATE_PWD_FAILED_TO_GET_SECURITY_CTX was added in 8.0.11.

- Error: 11234 SQLSTATE: HY000 (ER_VALIDATE_PWD_LENGTH_CHANGED)

  Message: Effective value of validate_password_length is changed. New value is %d

ER_VALIDATE_PWD_LENGTH_CHANGED was added in 8.0.11.

- Error: 11235 SQLSTATE: HY000 (ER_REWRITER_QUERY_ERROR_MSG)

  Message: %s

  ER_REWRITER_QUERY_ERROR_MSG was added in 8.0.11.

- Error: 11236 SQLSTATE: HY000 (ER_REWRITER_QUERY_FAILED)

  Message: Rewritten query failed to parse:%s

  ER_REWRITER_QUERY_FAILED was added in 8.0.11.

- Error: 11237 SQLSTATE: HY000 (ER_XPLUGIN_STARTUP_FAILED)

  Message: Startup failed with error "%s"

  ER_XPLUGIN_STARTUP_FAILED was added in 8.0.11.

- Error: 11238 SQLSTATE: HY000 (ER_XPLUGIN_SERVER_EXITING)

  Message: Exiting

  ER_XPLUGIN_SERVER_EXITING was added in 8.0.11.

- Error: 11239 SQLSTATE: HY000 (ER_XPLUGIN_SERVER_EXITED)

  Message: Exit done

  ER_XPLUGIN_SERVER_EXITED was added in 8.0.11.

- Error: 11240 SQLSTATE: HY000 (ER_XPLUGIN_USING_SSL_CONF_FROM_SERVER)

  Message: Using SSL configuration from MySQL Server

  ER_XPLUGIN_USING_SSL_CONF_FROM_SERVER was added in 8.0.11.

- Error: 11241 SQLSTATE: HY000 (ER_XPLUGIN_USING_SSL_CONF_FROM_MYSQLX)

  Message: Using SSL configuration from Mysqlx Plugin

  ER_XPLUGIN_USING_SSL_CONF_FROM_MYSQLX was added in 8.0.11.

- Error: 11242 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_USE_SSL_CONF)

  Message: Neither MySQL Server nor Mysqlx Plugin has valid SSL configuration

  ER_XPLUGIN_FAILED_TO_USE_SSL_CONF was added in 8.0.11.

- Error: 11243 SQLSTATE: HY000 (ER_XPLUGIN_USING_SSL_FOR_TLS_CONNECTION)

  Message: Using %s for TLS connections

  ER_XPLUGIN_USING_SSL_FOR_TLS_CONNECTION was added in 8.0.11.

- Error: 11244 SQLSTATE: HY000 (ER_XPLUGIN_REFERENCE_TO_SECURE_CONN_WITH_XPLUGIN)

  Message: For more information, please see the Using Secure Connections with X Plugin section in the MySQL documentation

  ER_XPLUGIN_REFERENCE_TO_SECURE_CONN_WITH_XPLUGIN was added in 8.0.11.

- Error: 11245 SQLSTATE: HY000 (ER_XPLUGIN_ERROR_MSG)

  Message: %s

  ER_XPLUGIN_ERROR_MSG was added in 8.0.11.

- Error: 11246 SQLSTATE: HY000 (ER_SHA_PWD_FAILED_TO_PARSE_AUTH_STRING)

  Message: Failed to parse stored authentication string for %s. Please check if mysql.user table not corrupted

  ER_SHA_PWD_FAILED_TO_PARSE_AUTH_STRING was added in 8.0.11.

- Error: 11247 SQLSTATE: HY000 (ER_SHA_PWD_FAILED_TO_GENERATE_MULTI_ROUND_HASH)

  Message: Error in generating multi-round hash for %s. Plugin can not perform authentication without it. This may be a transient problem

  ER_SHA_PWD_FAILED_TO_GENERATE_MULTI_ROUND_HASH was added in 8.0.11.

- Error: 11248 SQLSTATE: HY000 (ER_SHA_PWD_AUTH_REQUIRES_RSA_OR_SSL)

  Message: Authentication requires either RSA keys or SSL encryption

  ER_SHA_PWD_AUTH_REQUIRES_RSA_OR_SSL was added in 8.0.11.

- Error: 11249 SQLSTATE: HY000 (ER_SHA_PWD_RSA_KEY_TOO_LONG)

  Message: RSA key cipher length of %u is too long. Max value is %u

  ER_SHA_PWD_RSA_KEY_TOO_LONG was added in 8.0.11.

- Error: 11250 SQLSTATE: HY000 (ER_PLUGIN_COMMON_FAILED_TO_OPEN_FILTER_TABLES)

  Message: Failed to open the %s filter tables

  ER_PLUGIN_COMMON_FAILED_TO_OPEN_FILTER_TABLES was added in 8.0.11.

- Error: 11251 SQLSTATE: HY000 (ER_PLUGIN_COMMON_FAILED_TO_OPEN_TABLE)

  Message: Failed to open '%s.%s' %s table

  ER_PLUGIN_COMMON_FAILED_TO_OPEN_TABLE was added in 8.0.11.

- Error: 11252 SQLSTATE: HY000 (ER_AUTH_LDAP_ERROR_LOGGER_ERROR_MSG)

  Message: %s

  ER_AUTH_LDAP_ERROR_LOGGER_ERROR_MSG was added in 8.0.11.

- Error: 11253 SQLSTATE: HY000 (ER_CONN_CONTROL_ERROR_MSG)

  Message: %s

  ER_CONN_CONTROL_ERROR_MSG was added in 8.0.11.

- Error: 11254 SQLSTATE: HY000 (ER_GRP_RPL_ERROR_MSG)

  Message: %s

  ER_GRP_RPL_ERROR_MSG was added in 8.0.11.

- Error: 11255 SQLSTATE: HY000 (ER_SHA_PWD_SALT_FOR_USER_CORRUPT)

Message: Password salt for user '%s' is corrupt

`ER_SHA_PWD_SALT_FOR_USER_CORRUPT` was added in 8.0.11.

- Error: `11256` SQLSTATE: `HY000` (`ER_SYS_VAR_COMPONENT_OOM`)

  Message: Out of memory for component system variable '%s'.

  `ER_SYS_VAR_COMPONENT_OOM` was added in 8.0.11.

- Error: `11257` SQLSTATE: `HY000` (`ER_SYS_VAR_COMPONENT_VARIABLE_SET_READ_ONLY`)

  Message: variable %s of component %s was forced to be read-only: string variable without update_func and PLUGIN_VAR_MEMALLOC flag.

  `ER_SYS_VAR_COMPONENT_VARIABLE_SET_READ_ONLY` was added in 8.0.11.

- Error: `11258` SQLSTATE: `HY000` (`ER_SYS_VAR_COMPONENT_UNKNOWN_VARIABLE_TYPE`)

  Message: Unknown variable type code 0x%x in component '%s'.

  `ER_SYS_VAR_COMPONENT_UNKNOWN_VARIABLE_TYPE` was added in 8.0.11.

- Error: `11259` SQLSTATE: `HY000` (`ER_SYS_VAR_COMPONENT_FAILED_TO_PARSE_VARIABLE_OPTIONS`)

  Message: Parsing options for variable '%s' failed.

  `ER_SYS_VAR_COMPONENT_FAILED_TO_PARSE_VARIABLE_OPTIONS` was added in 8.0.11.

- Error: `11260` SQLSTATE: `HY000` (`ER_SYS_VAR_COMPONENT_FAILED_TO_MAKE_VARIABLE_PERSISTENT`)

  Message: Setting persistent options for component variable '%s' failed.

  `ER_SYS_VAR_COMPONENT_FAILED_TO_MAKE_VARIABLE_PERSISTENT` was added in 8.0.11.

- Error: `11261` SQLSTATE: `HY000` (`ER_COMPONENT_FILTER_CONFUSED`)

  Message: The log-filter component "%s" got confused at "%s" (state: %s) ...

  `ER_COMPONENT_FILTER_CONFUSED` was added in 8.0.11.

- Error: `11262` SQLSTATE: `HY000` (`ER_STOP_SLAVE_IO_THREAD_DISK_SPACE`)

  Message: Waiting until I/O thread for channel '%s' finish writing to disk before stopping. Free some disk space or use 'KILL' to abort I/O thread operation. Notice that aborting the I/O thread while rotating the relay log might corrupt the relay logs, requiring a server restart to fix it.

  `ER_STOP_SLAVE_IO_THREAD_DISK_SPACE` was added in 8.0.2.

- Error: `11263` SQLSTATE: `HY000` (`ER_LOG_FILE_CANNOT_OPEN`)

  Message: Could not use %s for logging (error %d - %s). Turning logging off for the server process. To turn it on again: fix the cause, then%s restart the MySQL server.

  `ER_LOG_FILE_CANNOT_OPEN` was added in 8.0.2.

- Error: `11268` SQLSTATE: `HY000` (`ER_PERSIST_OPTION_STATUS`)

  Message: Configuring persisted options failed: "%s".

  `ER_PERSIST_OPTION_STATUS` was added in 8.0.11.

- Error: 11269 SQLSTATE: HY000 (ER_NOT_IMPLEMENTED_GET_TABLESPACE_STATISTICS)

  Message: The storage engine '%s' does not provide dynamic table statistics

  ER_NOT_IMPLEMENTED_GET_TABLESPACE_STATISTICS was added in 8.0.11.

- Error: 11272 SQLSTATE: HY000 (ER_SSL_FIPS_MODE_ERROR)

  Message: SSL fips mode error: %s

  ER_SSL_FIPS_MODE_ERROR was added in 8.0.11.

- Error: 11273 SQLSTATE: HY000 (ER_CONN_INIT_CONNECT_IGNORED)

  Message: init_connect variable is ignored for user: %s host: %s due to expired password.

  ER_CONN_INIT_CONNECT_IGNORED was added in 8.0.11.

- Error: 11274 SQLSTATE: HY000 (ER_UNSUPPORTED_SQL_MODE)

  Message: sql_mode=0x%08x is not supported

  ER_UNSUPPORTED_SQL_MODE was added in 8.0.11.

- Error: 11275 SQLSTATE: HY000 (ER_REWRITER_OOM)

  Message: Out of memory.

  ER_REWRITER_OOM was added in 8.0.11.

- Error: 11276 SQLSTATE: HY000 (ER_REWRITER_TABLE_MALFORMED_ERROR)

  Message: Wrong column count or names when loading rules.

  ER_REWRITER_TABLE_MALFORMED_ERROR was added in 8.0.11.

- Error: 11277 SQLSTATE: HY000 (ER_REWRITER_LOAD_FAILED)

  Message: Some rules failed to load.

  ER_REWRITER_LOAD_FAILED was added in 8.0.11.

- Error: 11278 SQLSTATE: HY000 (ER_REWRITER_READ_FAILED)

  Message: Got error from storage engine while refreshing rewrite rules.

  ER_REWRITER_READ_FAILED was added in 8.0.11.

- Error: 11279 SQLSTATE: HY000 (ER_CONN_CONTROL_EVENT_COORDINATOR_INIT_FAILED)

  Message: Failed to initialize Connection_event_coordinator

  ER_CONN_CONTROL_EVENT_COORDINATOR_INIT_FAILED was added in 8.0.11.

- Error: 11280 SQLSTATE: HY000 (ER_CONN_CONTROL_STAT_CONN_DELAY_TRIGGERED_UPDATE_FAILED)

  Message: Failed to update connection delay triggered stats

  ER_CONN_CONTROL_STAT_CONN_DELAY_TRIGGERED_UPDATE_FAILED was added in 8.0.11.

- Error: 11281 SQLSTATE: HY000 (ER_CONN_CONTROL_STAT_CONN_DELAY_TRIGGERED_RESET_FAILED)

Message: Failed to reset connection delay triggered stats

`ER_CONN_CONTROL_STAT_CONN_DELAY_TRIGGERED_RESET_FAILED` was added in 8.0.11.

- Error: `11282` SQLSTATE: `HY000` (`ER_CONN_CONTROL_INVALID_CONN_DELAY_TYPE`)

  Message: Unexpected option type for connection delay.

  `ER_CONN_CONTROL_INVALID_CONN_DELAY_TYPE` was added in 8.0.11.

- Error: `11283` SQLSTATE: `HY000` (`ER_CONN_CONTROL_DELAY_ACTION_INIT_FAILED`)

  Message: Failed to initialize Connection_delay_action

  `ER_CONN_CONTROL_DELAY_ACTION_INIT_FAILED` was added in 8.0.11.

- Error: `11284` SQLSTATE: `HY000` (`ER_CONN_CONTROL_FAILED_TO_SET_CONN_DELAY`)

  Message: Could not set %s delay for connection delay.

  `ER_CONN_CONTROL_FAILED_TO_SET_CONN_DELAY` was added in 8.0.11.

- Error: `11285` SQLSTATE: `HY000` (`ER_CONN_CONTROL_FAILED_TO_UPDATE_CONN_DELAY_HASH`)

  Message: Failed to update connection delay hash for account : %s

  `ER_CONN_CONTROL_FAILED_TO_UPDATE_CONN_DELAY_HASH` was added in 8.0.11.

- Error: `11286` SQLSTATE: `HY000` (`ER_XPLUGIN_FORCE_STOP_CLIENT`)

  Message: %s: Force stopping client because exception occurred: %s

  `ER_XPLUGIN_FORCE_STOP_CLIENT` was added in 8.0.11.

- Error: `11287` SQLSTATE: `HY000` (`ER_XPLUGIN_MAX_AUTH_ATTEMPTS_REACHED`)

  Message: %s.%u: Maximum number of authentication attempts reached, login failed.

  `ER_XPLUGIN_MAX_AUTH_ATTEMPTS_REACHED` was added in 8.0.11.

- Error: `11288` SQLSTATE: `HY000` (`ER_XPLUGIN_BUFFER_PAGE_ALLOC_FAILED`)

  Message: Error allocating Buffer_page: %s

  `ER_XPLUGIN_BUFFER_PAGE_ALLOC_FAILED` was added in 8.0.11.

- Error: `11289` SQLSTATE: `HY000` (`ER_XPLUGIN_DETECTED_HANGING_CLIENTS`)

  Message: Detected %u hanging client(s)

  `ER_XPLUGIN_DETECTED_HANGING_CLIENTS` was added in 8.0.11.

- Error: `11290` SQLSTATE: `HY000` (`ER_XPLUGIN_FAILED_TO_ACCEPT_CLIENT`)

  Message: Error accepting client

  `ER_XPLUGIN_FAILED_TO_ACCEPT_CLIENT` was added in 8.0.11.

- Error: `11291` SQLSTATE: `HY000` (`ER_XPLUGIN_FAILED_TO_SCHEDULE_CLIENT`)

  Message: Internal error scheduling client for execution

  `ER_XPLUGIN_FAILED_TO_SCHEDULE_CLIENT` was added in 8.0.11.

- Error: 11292 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_PREPARE_IO_INTERFACES)

  Message: Preparation of I/O interfaces failed, X Protocol won't be accessible

  ER_XPLUGIN_FAILED_TO_PREPARE_IO_INTERFACES was added in 8.0.11.

- Error: 11293 SQLSTATE: HY000 (ER_XPLUGIN_SRV_SESSION_INIT_THREAD_FAILED)

  Message: srv_session_init_thread returned error

  ER_XPLUGIN_SRV_SESSION_INIT_THREAD_FAILED was added in 8.0.11.

- Error: 11294 SQLSTATE: HY000 (ER_XPLUGIN_UNABLE_TO_USE_USER_SESSION_ACCOUNT)

  Message: Unable to use user mysql.session account when connecting the server for internal plugin requests.

  ER_XPLUGIN_UNABLE_TO_USE_USER_SESSION_ACCOUNT was added in 8.0.11.

- Error: 11295 SQLSTATE: HY000 (ER_XPLUGIN_REFERENCE_TO_USER_ACCOUNT_DOC_SECTION)

  Message: For more information, please see the X Plugin User Account section in the MySQL documentation

  ER_XPLUGIN_REFERENCE_TO_USER_ACCOUNT_DOC_SECTION was added in 8.0.11.

- Error: 11296 SQLSTATE: HY000 (ER_XPLUGIN_UNEXPECTED_EXCEPTION_DISPATCHING_CMD)

  Message: %s: Unexpected exception dispatching command: %s

  ER_XPLUGIN_UNEXPECTED_EXCEPTION_DISPATCHING_CMD was added in 8.0.11.

- Error: 11297 SQLSTATE: HY000 (ER_XPLUGIN_EXCEPTION_IN_TASK_SCHEDULER)

  Message: Exception in post: %s

  ER_XPLUGIN_EXCEPTION_IN_TASK_SCHEDULER was added in 8.0.11.

- Error: 11298 SQLSTATE: HY000 (ER_XPLUGIN_TASK_SCHEDULING_FAILED)

  Message: Internal error scheduling task

  ER_XPLUGIN_TASK_SCHEDULING_FAILED was added in 8.0.11.

- Error: 11299 SQLSTATE: HY000 (ER_XPLUGIN_EXCEPTION_IN_EVENT_LOOP)

  Message: Exception in event loop: "%s": %s

  ER_XPLUGIN_EXCEPTION_IN_EVENT_LOOP was added in 8.0.11.

- Error: 11300 SQLSTATE: HY000 (ER_XPLUGIN_LISTENER_SETUP_FAILED)

  Message: Setup of %s failed, %s

  ER_XPLUGIN_LISTENER_SETUP_FAILED was added in 8.0.11.

- Error: 11301 SQLSTATE: HY000 (ER_XPLUING_NET_STARTUP_FAILED)

  Message: %s

  ER_XPLUING_NET_STARTUP_FAILED was added in 8.0.11.

- Error: 11302 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_AT_SSL_CONF)

Message: Failed at SSL configuration: "%s"

ER_XPLUGIN_FAILED_AT_SSL_CONF was added in 8.0.11.

- Error: 11303 SQLSTATE: HY000 (ER_XPLUGIN_CLIENT_SSL_HANDSHAKE_FAILED)

  Message: Error during SSL handshake for client connection (%i)

  ER_XPLUGIN_CLIENT_SSL_HANDSHAKE_FAILED was added in 8.0.11.

- Error: 11304 SQLSTATE: HY000 (ER_XPLUGIN_SSL_HANDSHAKE_WITH_SERVER_FAILED)

  Message: %s: Error during SSL handshake

  ER_XPLUGIN_SSL_HANDSHAKE_WITH_SERVER_FAILED was added in 8.0.11.

- Error: 11305 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_CREATE_SESSION_FOR_CONN)

  Message: %s: Error creating session for connection from %s

  ER_XPLUGIN_FAILED_TO_CREATE_SESSION_FOR_CONN was added in 8.0.11.

- Error: 11306 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_INITIALIZE_SESSION)

  Message: %s: Error initializing session for connection: %s

  ER_XPLUGIN_FAILED_TO_INITIALIZE_SESSION was added in 8.0.11.

- Error: 11307 SQLSTATE: HY000 (ER_XPLUGIN_MESSAGE_TOO_LONG)

  Message: %s: Message of size %u received, exceeding the limit of %i

  ER_XPLUGIN_MESSAGE_TOO_LONG was added in 8.0.11.

- Error: 11308 SQLSTATE: HY000 (ER_XPLUGIN_UNINITIALIZED_MESSAGE)

  Message: Message is not properly initialized: %s

  ER_XPLUGIN_UNINITIALIZED_MESSAGE was added in 8.0.11.

- Error: 11309 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_SET_MIN_NUMBER_OF_WORKERS)

  Message: Unable to set minimal number of workers to %u; actual value is %i

  ER_XPLUGIN_FAILED_TO_SET_MIN_NUMBER_OF_WORKERS was added in 8.0.11.

- Error: 11310 SQLSTATE: HY000 (ER_XPLUGIN_UNABLE_TO_ACCEPT_CONNECTION)

  Message: Unable to accept connection, disconnecting client

  ER_XPLUGIN_UNABLE_TO_ACCEPT_CONNECTION was added in 8.0.11.

- Error: 11311 SQLSTATE: HY000 (ER_XPLUGIN_ALL_IO_INTERFACES_DISABLED)

  Message: All I/O interfaces are disabled, X Protocol won't be accessible

  ER_XPLUGIN_ALL_IO_INTERFACES_DISABLED was added in 8.0.11.

- Error: 11312 SQLSTATE: HY000 (ER_XPLUGIN_INVALID_MSG_DURING_CLIENT_INIT)

  Message: %s: Invalid message %i received during client initialization

  ER_XPLUGIN_INVALID_MSG_DURING_CLIENT_INIT was added in 8.0.11.

- Error: 11313 SQLSTATE: HY000 (ER_XPLUGIN_CLOSING_CLIENTS_ON_SHUTDOWN)

  Message: %s: closing client because of shutdown (state: %i)

  ER_XPLUGIN_CLOSING_CLIENTS_ON_SHUTDOWN was added in 8.0.11.

- Error: 11314 SQLSTATE: HY000 (ER_XPLUGIN_ERROR_READING_SOCKET)

  Message: %s: Error reading from socket %s (%i)

  ER_XPLUGIN_ERROR_READING_SOCKET was added in 8.0.11.

- Error: 11315 SQLSTATE: HY000 (ER_XPLUGIN_PEER_DISCONNECTED_WHILE_READING_MSG_BODY)

  Message: %s: peer disconnected while reading message body

  ER_XPLUGIN_PEER_DISCONNECTED_WHILE_READING_MSG_BODY was added in 8.0.11.

- Error: 11316 SQLSTATE: HY000 (ER_XPLUGIN_READ_FAILED_CLOSING_CONNECTION)

  Message: client_id:%s - %s while reading from socket, closing connection

  ER_XPLUGIN_READ_FAILED_CLOSING_CONNECTION was added in 8.0.11.

- Error: 11317 SQLSTATE: HY000 (ER_XPLUGIN_INVALID_AUTH_METHOD)

  Message: %s.%u: Invalid authentication method %s

  ER_XPLUGIN_INVALID_AUTH_METHOD was added in 8.0.11.

- Error: 11318 SQLSTATE: HY000 (ER_XPLUGIN_UNEXPECTED_MSG_DURING_AUTHENTICATION)

  Message: %s: Unexpected message of type %i received during authentication

  ER_XPLUGIN_UNEXPECTED_MSG_DURING_AUTHENTICATION was added in 8.0.11.

- Error: 11319 SQLSTATE: HY000 (ER_XPLUGIN_ERROR_WRITING_TO_CLIENT)

  Message: Error writing to client: %s (%i)

  ER_XPLUGIN_ERROR_WRITING_TO_CLIENT was added in 8.0.11.

- Error: 11320 SQLSTATE: HY000 (ER_XPLUGIN_SCHEDULER_STARTED)

  Message: Scheduler "%s" started.

  ER_XPLUGIN_SCHEDULER_STARTED was added in 8.0.11.

- Error: 11321 SQLSTATE: HY000 (ER_XPLUGIN_SCHEDULER_STOPPED)

  Message: Scheduler "%s" stopped.

  ER_XPLUGIN_SCHEDULER_STOPPED was added in 8.0.11.

- Error: 11322 SQLSTATE: HY000 (ER_XPLUGIN_LISTENER_SYS_VARIABLE_ERROR)

  Message: Please see the MySQL documentation for '%s' system variables to fix the error

  ER_XPLUGIN_LISTENER_SYS_VARIABLE_ERROR was added in 8.0.11.

- Error: 11323 SQLSTATE: HY000 (ER_XPLUGIN_LISTENER_STATUS_MSG)

  Message: X Plugin listens on %s

ER_XPLUGIN_LISTENER_STATUS_MSG was added in 8.0.11.

- Error: 11324 SQLSTATE: HY000 (ER_XPLUGIN_RETRYING_BIND_ON_PORT)

  Message: Retrying `bind()` on TCP/IP port %i

  ER_XPLUGIN_RETRYING_BIND_ON_PORT was added in 8.0.11.

- Error: 11325 SQLSTATE: HY000 (ER_XPLUGIN_SHUTDOWN_TRIGGERED)

  Message: Shutdown triggered by mysqld abort flag

  ER_XPLUGIN_SHUTDOWN_TRIGGERED was added in 8.0.11.

- Error: 11326 SQLSTATE: HY000 (ER_XPLUGIN_USER_ACCOUNT_WITH_ALL_PERMISSIONS)

  Message: Using %s account for authentication which has all required permissions

  ER_XPLUGIN_USER_ACCOUNT_WITH_ALL_PERMISSIONS was added in 8.0.11.

- Error: 11327 SQLSTATE: HY000 (ER_XPLUGIN_EXISTING_USER_ACCOUNT_WITH_INCOMPLETE_GRANTS)

  Message: Using existing %s account for authentication. Incomplete grants will be fixed

  ER_XPLUGIN_EXISTING_USER_ACCOUNT_WITH_INCOMPLETE_GRANTS was added in 8.0.11.

- Error: 11328 SQLSTATE: HY000 (ER_XPLUGIN_SERVER_STARTS_HANDLING_CONNECTIONS)

  Message: Server starts handling incoming connections

  ER_XPLUGIN_SERVER_STARTS_HANDLING_CONNECTIONS was added in 8.0.11.

- Error: 11329 SQLSTATE: HY000 (ER_XPLUGIN_SERVER_STOPPED_HANDLING_CONNECTIONS)

  Message: Stopped handling incoming connections

  ER_XPLUGIN_SERVER_STOPPED_HANDLING_CONNECTIONS was added in 8.0.11.

- Error: 11330 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_INTERRUPT_SESSION)

  Message: %s: Could not interrupt client session

  ER_XPLUGIN_FAILED_TO_INTERRUPT_SESSION was added in 8.0.11.

- Error: 11331 SQLSTATE: HY000 (ER_XPLUGIN_CLIENT_RELEASE_TRIGGERED)

  Message: %s: release triggered by timeout in state:%i

  ER_XPLUGIN_CLIENT_RELEASE_TRIGGERED was added in 8.0.11.

- Error: 11332 SQLSTATE: HY000 (ER_XPLUGIN_IPv6_AVAILABLE)

  Message: IPv6 is available

  ER_XPLUGIN_IPv6_AVAILABLE was added in 8.0.11.

- Error: 11333 SQLSTATE: HY000 (ER_XPLUGIN_UNIX_SOCKET_NOT_CONFIGURED)

  Message: UNIX socket not configured

  ER_XPLUGIN_UNIX_SOCKET_NOT_CONFIGURED was added in 8.0.11.

- Error: 11334 SQLSTATE: HY000 (ER_XPLUGIN_CLIENT_KILL_MSG)

Message: Kill client: %i %s

ER_XPLUGIN_CLIENT_KILL_MSG was added in 8.0.11.

- Error: 11335 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_GET_SECURITY_CTX)

  Message: Could not get security context for session

  ER_XPLUGIN_FAILED_TO_GET_SECURITY_CTX was added in 8.0.11.

- Error: 11336 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_SWITCH_SECURITY_CTX_TO_ROOT)

  Message: Unable to switch security context to root

  ER_XPLUGIN_FAILED_TO_SWITCH_SECURITY_CTX_TO_ROOT was added in 8.0.11.

- Error: 11337 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_CLOSE_SQL_SESSION)

  Message: Error closing SQL session

  ER_XPLUGIN_FAILED_TO_CLOSE_SQL_SESSION was added in 8.0.11.

- Error: 11338 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_EXECUTE_ADMIN_CMD)

  Message: Error executing admin command %s: %s

  ER_XPLUGIN_FAILED_TO_EXECUTE_ADMIN_CMD was added in 8.0.11.

- Error: 11339 SQLSTATE: HY000 (ER_XPLUGIN_EMPTY_ADMIN_CMD)

  Message: Error executing empty admin command

  ER_XPLUGIN_EMPTY_ADMIN_CMD was added in 8.0.11.

- Error: 11340 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_GET_SYS_VAR)

  Message: Unable to retrieve system variable \'%s\'

  ER_XPLUGIN_FAILED_TO_GET_SYS_VAR was added in 8.0.11.

- Error: 11341 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_GET_CREATION_STMT)

  Message: Unable to get creation stmt for collection \'%s\'; query result size: %lu

  ER_XPLUGIN_FAILED_TO_GET_CREATION_STMT was added in 8.0.11.

- Error: 11342 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_GET_ENGINE_INFO)

  Message: Unable to get engine info for collection \'%s\'; creation stmt: %s

  ER_XPLUGIN_FAILED_TO_GET_ENGINE_INFO was added in 8.0.11.

- Error: 11343 SQLSTATE: HY000 (ER_XPLUGIN_FAIL_TO_GET_RESULT_DATA)

  Message: Error getting result data: %s

  ER_XPLUGIN_FAIL_TO_GET_RESULT_DATA was added in 8.0.11.

- Error: 11344 SQLSTATE: HY000 (ER_XPLUGIN_CAPABILITY_EXPIRED_PASSWORD)

  Message: Capability expired password failed with error: %s

  ER_XPLUGIN_CAPABILITY_EXPIRED_PASSWORD was added in 8.0.11.

- Error: 11345 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_SET_SO_REUSEADDR_FLAG)

  Message: Failed to set SO_REUSEADDR flag (error: %d).

  ER_XPLUGIN_FAILED_TO_SET_SO_REUSEADDR_FLAG was added in 8.0.11.

- Error: 11346 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_OPEN_INTERNAL_SESSION)

  Message: Could not open internal MySQL session

  ER_XPLUGIN_FAILED_TO_OPEN_INTERNAL_SESSION was added in 8.0.11.

- Error: 11347 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_SWITCH_CONTEXT)

  Message: Unable to switch context to user %s

  ER_XPLUGIN_FAILED_TO_SWITCH_CONTEXT was added in 8.0.11.

- Error: 11348 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_UNREGISTER_UDF)

  Message: Can\'t unregister \'%s\' user defined function

  ER_XPLUGIN_FAILED_TO_UNREGISTER_UDF was added in 8.0.11.

- Error: 11349 SQLSTATE: HY000 (ER_XPLUGIN_GET_PEER_ADDRESS_FAILED)

  Message: %s: get peer address failed, can't resolve IP to hostname

  ER_XPLUGIN_GET_PEER_ADDRESS_FAILED was added in 8.0.11.

- Error: 11350 SQLSTATE: HY000 (ER_XPLUGIN_CAPABILITY_CLIENT_INTERACTIVE_FAILED)

  Message: Capability client interactive failed with error: %s

  ER_XPLUGIN_CAPABILITY_CLIENT_INTERACTIVE_FAILED was added in 8.0.11.

- Error: 11351 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_RESET_IPV6_V6ONLY_FLAG)

  Message: Failed to reset IPV6_V6ONLY flag (error: %d). The server will listen to IPv6 addresses only.

  ER_XPLUGIN_FAILED_TO_RESET_IPV6_V6ONLY_FLAG was added in 8.0.11.

- Error: 11352 SQLSTATE: HY000 (ER_KEYRING_INVALID_KEY_TYPE)

  Message: Invalid key type

  ER_KEYRING_INVALID_KEY_TYPE was added in 8.0.11.

- Error: 11353 SQLSTATE: HY000 (ER_KEYRING_INVALID_KEY_LENGTH)

  Message: Invalid key length for given block cipher

  ER_KEYRING_INVALID_KEY_LENGTH was added in 8.0.11.

- Error: 11354 SQLSTATE: HY000 (ER_KEYRING_FAILED_TO_CREATE_KEYRING_DIR)

  Message: Could not create keyring directory. The keyring_file will stay unusable until correct path to the keyring directory gets provided

  ER_KEYRING_FAILED_TO_CREATE_KEYRING_DIR was added in 8.0.11.

- Error: 11355 SQLSTATE: HY000 (ER_KEYRING_FILE_INIT_FAILED)

Message: keyring_file initialization failure. Please check if the keyring_file_data points to readable keyring file or keyring file can be created in the specified location. The keyring_file will stay unusable until correct path to the keyring file gets provided

`ER_KEYRING_FILE_INIT_FAILED` was added in 8.0.11.

- Error: `11356` SQLSTATE: `HY000` (`ER_KEYRING_INTERNAL_EXCEPTION_FAILED_FILE_INIT`)

  Message: keyring_file initialization failure due to internal exception inside the plugin.

  `ER_KEYRING_INTERNAL_EXCEPTION_FAILED_FILE_INIT` was added in 8.0.11.

- Error: `11357` SQLSTATE: `HY000` (`ER_KEYRING_FAILED_TO_GENERATE_KEY`)

  Message: Failed to generate a key due to internal exception inside keyring_file plugin

  `ER_KEYRING_FAILED_TO_GENERATE_KEY` was added in 8.0.11.

- Error: `11358` SQLSTATE: `HY000` (`ER_KEYRING_CHECK_KEY_FAILED_DUE_TO_INVALID_KEY`)

  Message: Error while %s key: invalid key_type

  `ER_KEYRING_CHECK_KEY_FAILED_DUE_TO_INVALID_KEY` was added in 8.0.11.

- Error: `11359` SQLSTATE: `HY000` (`ER_KEYRING_CHECK_KEY_FAILED_DUE_TO_EMPTY_KEY_ID`)

  Message: Error while %s key: key_id cannot be empty

  `ER_KEYRING_CHECK_KEY_FAILED_DUE_TO_EMPTY_KEY_ID` was added in 8.0.11.

- Error: `11360` SQLSTATE: `HY000` (`ER_KEYRING_OPERATION_FAILED_DUE_TO_INTERNAL_ERROR`)

  Message: Failed to %s due to internal exception inside %s plugin

  `ER_KEYRING_OPERATION_FAILED_DUE_TO_INTERNAL_ERROR` was added in 8.0.11.

- Error: `11361` SQLSTATE: `HY000` (`ER_KEYRING_INCORRECT_FILE`)

  Message: Incorrect Keyring file

  `ER_KEYRING_INCORRECT_FILE` was added in 8.0.11.

- Error: `11362` SQLSTATE: `HY000` (`ER_KEYRING_FOUND_MALFORMED_BACKUP_FILE`)

  Message: Found malformed keyring backup file - removing it

  `ER_KEYRING_FOUND_MALFORMED_BACKUP_FILE` was added in 8.0.11.

- Error: `11363` SQLSTATE: `HY000` (`ER_KEYRING_FAILED_TO_RESTORE_FROM_BACKUP_FILE`)

  Message: Error while restoring keyring from backup file cannot overwrite keyring with backup

  `ER_KEYRING_FAILED_TO_RESTORE_FROM_BACKUP_FILE` was added in 8.0.11.

- Error: `11364` SQLSTATE: `HY000` (`ER_KEYRING_FAILED_TO_FLUSH_KEYRING_TO_FILE`)

  Message: Error while flushing in-memory keyring into keyring file

  `ER_KEYRING_FAILED_TO_FLUSH_KEYRING_TO_FILE` was added in 8.0.11.

- Error: `11365` SQLSTATE: `HY000` (`ER_KEYRING_FAILED_TO_GET_FILE_STAT`)

Message: Error while reading stat for %s.Please check if file %s was not removed. OS returned this error: %s

`ER_KEYRING_FAILED_TO_GET_FILE_STAT` was added in 8.0.11.

- Error: `11366` SQLSTATE: `HY000` (`ER_KEYRING_FAILED_TO_REMOVE_FILE`)

  Message: Could not remove file %s OS retuned this error: %s

  `ER_KEYRING_FAILED_TO_REMOVE_FILE` was added in 8.0.11.

- Error: `11367` SQLSTATE: `HY000` (`ER_KEYRING_FAILED_TO_TRUNCATE_FILE`)

  Message: Could not truncate file %s. OS retuned this error: %s

  `ER_KEYRING_FAILED_TO_TRUNCATE_FILE` was added in 8.0.11.

- Error: `11368` SQLSTATE: `HY000` (`ER_KEYRING_UNKNOWN_ERROR`)

  Message: Unknown error %d

  `ER_KEYRING_UNKNOWN_ERROR` was added in 8.0.11.

- Error: `11369` SQLSTATE: `HY000` (`ER_KEYRING_FAILED_TO_SET_KEYRING_FILE_DATA`)

  Message: keyring_file_data cannot be set to new value as the keyring file cannot be created/ accessed in the provided path

  `ER_KEYRING_FAILED_TO_SET_KEYRING_FILE_DATA` was added in 8.0.11.

- Error: `11370` SQLSTATE: `HY000` (`ER_KEYRING_FILE_IO_ERROR`)

  Message: %s

  `ER_KEYRING_FILE_IO_ERROR` was added in 8.0.11.

- Error: `11371` SQLSTATE: `HY000` (`ER_KEYRING_FAILED_TO_LOAD_KEYRING_CONTENT`)

  Message: Error while loading keyring content. The keyring might be malformed

  `ER_KEYRING_FAILED_TO_LOAD_KEYRING_CONTENT` was added in 8.0.11.

- Error: `11372` SQLSTATE: `HY000` (`ER_KEYRING_FAILED_TO_FLUSH_KEYS_TO_KEYRING`)

  Message: Could not flush keys to keyring

  `ER_KEYRING_FAILED_TO_FLUSH_KEYS_TO_KEYRING` was added in 8.0.11.

- Error: `11373` SQLSTATE: `HY000` (`ER_KEYRING_FAILED_TO_FLUSH_KEYS_TO_KEYRING_BACKUP`)

  Message: Could not flush keys to keyring's backup

  `ER_KEYRING_FAILED_TO_FLUSH_KEYS_TO_KEYRING_BACKUP` was added in 8.0.11.

- Error: `11374` SQLSTATE: `HY000` (`ER_KEYRING_KEY_FETCH_FAILED_DUE_TO_EMPTY_KEY_ID`)

  Message: Error while fetching key: key_id cannot be empty

  `ER_KEYRING_KEY_FETCH_FAILED_DUE_TO_EMPTY_KEY_ID` was added in 8.0.11.

- Error: `11375` SQLSTATE: `HY000` (`ER_KEYRING_FAILED_TO_REMOVE_KEY_DUE_TO_EMPTY_ID`)

Message: Error while removing key: key_id cannot be empty

ER_KEYRING_FAILED_TO_REMOVE_KEY_DUE_TO_EMPTY_ID was added in 8.0.11.

- Error: 11376 SQLSTATE: HY000 (ER_KEYRING_OKV_INCORRECT_KEY_VAULT_CONFIGURED)

  Message: For keyring_okv to be initialized, please point keyring_okv_conf_dir variable to a directory with Oracle Key Vault configuration file and ssl materials

  ER_KEYRING_OKV_INCORRECT_KEY_VAULT_CONFIGURED was added in 8.0.11.

- Error: 11377 SQLSTATE: HY000 (ER_KEYRING_OKV_INIT_FAILED_DUE_TO_INCORRECT_CONF)

  Message: keyring_okv initialization failure. Please check that the keyring_okv_conf_dir points to a readable directory and that the directory contains Oracle Key Vault configuration file and ssl materials. Please also check that Oracle Key Vault is up and running.

  ER_KEYRING_OKV_INIT_FAILED_DUE_TO_INCORRECT_CONF was added in 8.0.11.

- Error: 11378 SQLSTATE: HY000 (ER_KEYRING_OKV_INIT_FAILED_DUE_TO_INTERNAL_ERROR)

  Message: keyring_okv initialization failure due to internal exception inside the plugin

  ER_KEYRING_OKV_INIT_FAILED_DUE_TO_INTERNAL_ERROR was added in 8.0.11.

- Error: 11379 SQLSTATE: HY000 (ER_KEYRING_OKV_INVALID_KEY_TYPE)

  Message: Invalid key type

  ER_KEYRING_OKV_INVALID_KEY_TYPE was added in 8.0.11.

- Error: 11380 SQLSTATE: HY000 (ER_KEYRING_OKV_INVALID_KEY_LENGTH_FOR_CIPHER)

  Message: Invalid key length for given block cipher

  ER_KEYRING_OKV_INVALID_KEY_LENGTH_FOR_CIPHER was added in 8.0.11.

- Error: 11381 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_GENERATE_KEY_DUE_TO_INTERNAL_ERROR)

  Message: Failed to generate a key due to internal exception inside keyring_okv plugin

  ER_KEYRING_OKV_FAILED_TO_GENERATE_KEY_DUE_TO_INTERNAL_ERROR was added in 8.0.11.

- Error: 11382 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_FIND_SERVER_ENTRY)

  Message: Could not find entry for server in configuration file %s

  ER_KEYRING_OKV_FAILED_TO_FIND_SERVER_ENTRY was added in 8.0.11.

- Error: 11383 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_FIND_STANDBY_SERVER_ENTRY)

  Message: Could not find entry for standby server in configuration file %s

  ER_KEYRING_OKV_FAILED_TO_FIND_STANDBY_SERVER_ENTRY was added in 8.0.11.

- Error: 11384 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_PARSE_CONF_FILE)

  Message: Could not parse the %s file provided

ER_KEYRING_OKV_FAILED_TO_PARSE_CONF_FILE was added in 8.0.11.

- Error: 11385 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_LOAD_KEY_UID)

  Message: Could not load keys' uids from the OKV server

  ER_KEYRING_OKV_FAILED_TO_LOAD_KEY_UID was added in 8.0.11.

- Error: 11386 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_INIT_SSL_LAYER)

  Message: Could not initialize ssl layer

  ER_KEYRING_OKV_FAILED_TO_INIT_SSL_LAYER was added in 8.0.11.

- Error: 11387 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_INIT_CLIENT)

  Message: Could not initialize OKV client

  ER_KEYRING_OKV_FAILED_TO_INIT_CLIENT was added in 8.0.11.

- Error: 11388 SQLSTATE: HY000 (ER_KEYRING_OKV_CONNECTION_TO_SERVER_FAILED)

  Message: Could not connect to the OKV server

  ER_KEYRING_OKV_CONNECTION_TO_SERVER_FAILED was added in 8.0.11.

- Error: 11389 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_REMOVE_KEY)

  Message: Could not remove the key

  ER_KEYRING_OKV_FAILED_TO_REMOVE_KEY was added in 8.0.11.

- Error: 11390 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_ADD_ATTRIBUTE)

  Message: Could not add attribute, attribute_name=%s attribute value=%s

  ER_KEYRING_OKV_FAILED_TO_ADD_ATTRIBUTE was added in 8.0.11.

- Error: 11391 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_GENERATE_KEY)

  Message: Could not generate the key.

  ER_KEYRING_OKV_FAILED_TO_GENERATE_KEY was added in 8.0.11.

- Error: 11392 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_STORE_KEY)

  Message: Could not store the key.

  ER_KEYRING_OKV_FAILED_TO_STORE_KEY was added in 8.0.11.

- Error: 11393 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_ACTIVATE_KEYS)

  Message: Could not activate the key.

  ER_KEYRING_OKV_FAILED_TO_ACTIVATE_KEYS was added in 8.0.11.

- Error: 11394 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_FETCH_KEY)

  Message: Could not fetch generated key

  ER_KEYRING_OKV_FAILED_TO_FETCH_KEY was added in 8.0.11.

- Error: 11395 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_STORE_OR_GENERATE_KEY)

Message: Could not store/generate the key - failed to set key attribute x-key-ready

`ER_KEYRING_OKV_FAILED_TO_STORE_OR_GENERATE_KEY` was added in 8.0.11.

- Error: `11396` SQLSTATE: `HY000` (`ER_KEYRING_OKV_FAILED_TO_RETRIEVE_KEY_SIGNATURE`)

  Message: Could not retrieve key signature from custom attributes

  `ER_KEYRING_OKV_FAILED_TO_RETRIEVE_KEY_SIGNATURE` was added in 8.0.11.

- Error: `11397` SQLSTATE: `HY000` (`ER_KEYRING_OKV_FAILED_TO_RETRIEVE_KEY`)

  Message: Could not retrieve key from OKV

  `ER_KEYRING_OKV_FAILED_TO_RETRIEVE_KEY` was added in 8.0.11.

- Error: `11398` SQLSTATE: `HY000` (`ER_KEYRING_OKV_FAILED_TO_LOAD_SSL_TRUST_STORE`)

  Message: Error loading trust store

  `ER_KEYRING_OKV_FAILED_TO_LOAD_SSL_TRUST_STORE` was added in 8.0.11.

- Error: `11399` SQLSTATE: `HY000` (`ER_KEYRING_OKV_FAILED_TO_SET_CERTIFICATE_FILE`)

  Message: Error setting the certificate file.

  `ER_KEYRING_OKV_FAILED_TO_SET_CERTIFICATE_FILE` was added in 8.0.11.

- Error: `11400` SQLSTATE: `HY000` (`ER_KEYRING_OKV_FAILED_TO_SET_KEY_FILE`)

  Message: Error setting the key file.

  `ER_KEYRING_OKV_FAILED_TO_SET_KEY_FILE` was added in 8.0.11.

- Error: `11401` SQLSTATE: `HY000` (`ER_KEYRING_OKV_KEY_MISMATCH`)

  Message: Private key does not match the certificate public key

  `ER_KEYRING_OKV_KEY_MISMATCH` was added in 8.0.11.

- Error: `11402` SQLSTATE: `HY000` (`ER_KEYRING_ENCRYPTED_FILE_INCORRECT_KEYRING_FILE`)

  Message: Incorrect Keyring file

  `ER_KEYRING_ENCRYPTED_FILE_INCORRECT_KEYRING_FILE` was added in 8.0.11.

- Error: `11403` SQLSTATE: `HY000` (`ER_KEYRING_ENCRYPTED_FILE_DECRYPTION_FAILED`)

  Message: Keyring_encrypted_file decryption failed. Please verify --keyring-encrypted-file-password option value.

  `ER_KEYRING_ENCRYPTED_FILE_DECRYPTION_FAILED` was added in 8.0.11.

- Error: `11404` SQLSTATE: `HY000` (`ER_KEYRING_ENCRYPTED_FILE_FOUND_MALFORMED_BACKUP_FILE`)

  Message: Found malformed keyring backup file - removing it

  `ER_KEYRING_ENCRYPTED_FILE_FOUND_MALFORMED_BACKUP_FILE` was added in 8.0.11.

- Error: `11405` SQLSTATE: `HY000` (`ER_KEYRING_ENCRYPTED_FILE_FAILED_TO_RESTORE_KEYRING`)

Message: Error while restoring keyring from backup file cannot overwrite keyring with backup

`ER_KEYRING_ENCRYPTED_FILE_FAILED_TO_RESTORE_KEYRING` was added in 8.0.11.

- Error: `11406` SQLSTATE: `HY000` (`ER_KEYRING_ENCRYPTED_FILE_FAILED_TO_FLUSH_KEYRING`)

  Message: Error while flushing in-memory keyring into keyring file

  `ER_KEYRING_ENCRYPTED_FILE_FAILED_TO_FLUSH_KEYRING` was added in 8.0.11.

- Error: `11407` SQLSTATE: `HY000` (`ER_KEYRING_ENCRYPTED_FILE_ENCRYPTION_FAILED`)

  Message: Keyring_encrypted_file encryption failed. Please verify --keyring-encrypted-file-password option value.

  `ER_KEYRING_ENCRYPTED_FILE_ENCRYPTION_FAILED` was added in 8.0.11.

- Error: `11408` SQLSTATE: `HY000` (`ER_KEYRING_ENCRYPTED_FILE_INVALID_KEYRING_DIR`)

  Message: keyring_encrypted_file_data cannot be set to new value as the keyring file cannot be created/accessed in the provided path

  `ER_KEYRING_ENCRYPTED_FILE_INVALID_KEYRING_DIR` was added in 8.0.11.

- Error: `11409` SQLSTATE: `HY000` (`ER_KEYRING_ENCRYPTED_FILE_FAILED_TO_CREATE_KEYRING_DIR`)

  Message: Could not create keyring directory The keyring_encrypted_file will stay unusable until correct path to the keyring directory gets provided

  `ER_KEYRING_ENCRYPTED_FILE_FAILED_TO_CREATE_KEYRING_DIR` was added in 8.0.11.

- Error: `11410` SQLSTATE: `HY000` (`ER_KEYRING_ENCRYPTED_FILE_PASSWORD_IS_INVALID`)

  Message: The keyring_encrypted_file_password must be set to a valid value.

  `ER_KEYRING_ENCRYPTED_FILE_PASSWORD_IS_INVALID` was added in 8.0.11.

- Error: `11411` SQLSTATE: `HY000` (`ER_KEYRING_ENCRYPTED_FILE_PASSWORD_IS_TOO_LONG`)

  Message: Too long keyring_encrypted_file_password value.

  `ER_KEYRING_ENCRYPTED_FILE_PASSWORD_IS_TOO_LONG` was added in 8.0.11.

- Error: `11412` SQLSTATE: `HY000` (`ER_KEYRING_ENCRYPTED_FILE_INIT_FAILURE`)

  Message: keyring_encrypted_file initialization failure. Please check if the keyring_encrypted_file_data points to readable keyring file or keyring file can be created in the specified location or password to decrypt keyring file is correct.

  `ER_KEYRING_ENCRYPTED_FILE_INIT_FAILURE` was added in 8.0.11.

- Error: `11413` SQLSTATE: `HY000` (`ER_KEYRING_ENCRYPTED_FILE_INIT_FAILED_DUE_TO_INTERNAL_ERROR`)

  Message: keyring_encrypted_file initialization failure due to internal exception inside the plugin

  `ER_KEYRING_ENCRYPTED_FILE_INIT_FAILED_DUE_TO_INTERNAL_ERROR` was added in 8.0.11.

- Error: `11414` SQLSTATE: `HY000` (`ER_KEYRING_ENCRYPTED_FILE_GEN_KEY_FAILED_DUE_TO_INTERNAL_ERROR`)

Message: Failed to generate a key due to internal exception inside keyring_encrypted_file plugin

`ER_KEYRING_ENCRYPTED_FILE_GEN_KEY_FAILED_DUE_TO_INTERNAL_ERROR` was added in 8.0.11.

- Error: `11415` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_SET_CMK_ID`)

  Message: keyring_aws_cmk_id cannot be set to the new value as AWS KMS seems to not understand the id provided. Please check that CMK id provided is correct.

  `ER_KEYRING_AWS_FAILED_TO_SET_CMK_ID` was added in 8.0.11.

- Error: `11416` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_SET_REGION`)

  Message: keyring_aws_region cannot be set to the new value as AWS KMS seems to not understand the region provided. Please check that region provided is correct.

  `ER_KEYRING_AWS_FAILED_TO_SET_REGION` was added in 8.0.11.

- Error: `11417` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_OPEN_CONF_FILE`)

  Message: Could not open keyring_aws configuration file: %s. OS returned this error: %s

  `ER_KEYRING_AWS_FAILED_TO_OPEN_CONF_FILE` was added in 8.0.11.

- Error: `11418` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_ACCESS_KEY_ID_FROM_CONF_FILE`)

  Message: Could not read AWS access key id from keyring_aws configuration file: %s. OS returned this error: %s

  `ER_KEYRING_AWS_FAILED_TO_ACCESS_KEY_ID_FROM_CONF_FILE` was added in 8.0.11.

- Error: `11419` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_ACCESS_KEY_FROM_CONF_FILE`)

  Message: Could not read AWS access key from keyring_aws configuration file: %s. OS returned this error: %s

  `ER_KEYRING_AWS_FAILED_TO_ACCESS_KEY_FROM_CONF_FILE` was added in 8.0.11.

- Error: `11420` SQLSTATE: `HY000` (`ER_KEYRING_AWS_INVALID_CONF_FILE_PATH`)

  Message: Path to keyring aws configuration file cannot be empty

  `ER_KEYRING_AWS_INVALID_CONF_FILE_PATH` was added in 8.0.11.

- Error: `11421` SQLSTATE: `HY000` (`ER_KEYRING_AWS_INVALID_DATA_FILE_PATH`)

  Message: Path to keyring_aws storage file cannot be empty.

  `ER_KEYRING_AWS_INVALID_DATA_FILE_PATH` was added in 8.0.11.

- Error: `11422` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_ACCESS_OR_CREATE_KEYRING_DIR`)

  Message: Unable to create/access keyring directory.

  `ER_KEYRING_AWS_FAILED_TO_ACCESS_OR_CREATE_KEYRING_DIR` was added in 8.0.11.

- Error: `11423` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_ACCESS_OR_CREATE_KEYRING_DATA_FILE`)

Message: Unable to create/access keyring_aws storage file. Please check if keyring_aws_data_file points to location where keyring file can be created/accessed. Please also make sure that MySQL server's user has high enough privileges to access this location.

`ER_KEYRING_AWS_FAILED_TO_ACCESS_OR_CREATE_KEYRING_DATA_FILE` was added in 8.0.11.

- Error: `11424` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_INIT_DUE_TO_INTERNAL_ERROR`)

  Message: keyring_aws initialization failed due to internal error when initializing synchronization primitive - %s. OS returned this error: %s:

  `ER_KEYRING_AWS_FAILED_TO_INIT_DUE_TO_INTERNAL_ERROR` was added in 8.0.11.

- Error: `11425` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_ACCESS_DATA_FILE`)

  Message: Could not access keyring_aws storage file in the path provided. Please check if the keyring_aws directory can be accessed by MySQL Server

  `ER_KEYRING_AWS_FAILED_TO_ACCESS_DATA_FILE` was added in 8.0.11.

- Error: `11426` SQLSTATE: `HY000` (`ER_KEYRING_AWS_CMK_ID_NOT_SET`)

  Message: keyring_aws_cmk_id has to be set

  `ER_KEYRING_AWS_CMK_ID_NOT_SET` was added in 8.0.11.

- Error: `11427` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_GET_KMS_CREDENTIAL_FROM_CONF_FILE`)

  Message: Could not get AWS KMS credentials from the configuration file

  `ER_KEYRING_AWS_FAILED_TO_GET_KMS_CREDENTIAL_FROM_CONF_FILE` was added in 8.0.11.

- Error: `11428` SQLSTATE: `HY000` (`ER_KEYRING_AWS_INIT_FAILURE`)

  Message: keyring_aws initialization failure.

  `ER_KEYRING_AWS_INIT_FAILURE` was added in 8.0.11.

- Error: `11429` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_INIT_DUE_TO_PLUGIN_INTERNAL_ERROR`)

  Message: keyring_aws initialization failure due to internal exception inside the plugin

  `ER_KEYRING_AWS_FAILED_TO_INIT_DUE_TO_PLUGIN_INTERNAL_ERROR` was added in 8.0.11.

- Error: `11430` SQLSTATE: `HY000` (`ER_KEYRING_AWS_INVALID_KEY_LENGTH_FOR_CIPHER`)

  Message: Invalid key length for given block cipher

  `ER_KEYRING_AWS_INVALID_KEY_LENGTH_FOR_CIPHER` was added in 8.0.11.

- Error: `11431` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_GENERATE_KEY_DUE_TO_INTERNAL_ERROR`)

  Message: Failed to generate a key due to internal exception inside keyring_file plugin

  `ER_KEYRING_AWS_FAILED_TO_GENERATE_KEY_DUE_TO_INTERNAL_ERROR` was added in 8.0.11.

- Error: `11432` SQLSTATE: `HY000` (`ER_KEYRING_AWS_INCORRECT_FILE`)

Message: Incorrect Keyring file

`ER_KEYRING_AWS_INCORRECT_FILE` was added in 8.0.11.

- Error: `11433` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FOUND_MALFORMED_BACKUP_FILE`)

  Message: Found malformed keyring backup file - removing it

  `ER_KEYRING_AWS_FOUND_MALFORMED_BACKUP_FILE` was added in 8.0.11.

- Error: `11434` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_RESTORE_FROM_BACKUP_FILE`)

  Message: Error while restoring keyring from backup file cannot overwrite keyring with backup

  `ER_KEYRING_AWS_FAILED_TO_RESTORE_FROM_BACKUP_FILE` was added in 8.0.11.

- Error: `11435` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_FLUSH_KEYRING_TO_FILE`)

  Message: Error while flushing in-memory keyring into keyring file

  `ER_KEYRING_AWS_FAILED_TO_FLUSH_KEYRING_TO_FILE` was added in 8.0.11.

- Error: `11436` SQLSTATE: `HY000` (`ER_KEYRING_AWS_INCORRECT_REGION`)

  Message: Wrong region

  `ER_KEYRING_AWS_INCORRECT_REGION` was added in 8.0.11.

- Error: `11437` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_CONNECT_KMS`)

  Message: Could not connect to AWS KMS with the credentials provided. Please make sure they are correct. AWS KMS returned this error: %s

  `ER_KEYRING_AWS_FAILED_TO_CONNECT_KMS` was added in 8.0.11.

- Error: `11438` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_GENERATE_NEW_KEY`)

  Message: Could not generate a new key. AWS KMS returned this error: %s

  `ER_KEYRING_AWS_FAILED_TO_GENERATE_NEW_KEY` was added in 8.0.11.

- Error: `11439` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_ENCRYPT_KEY`)

  Message: Could not encrypt key. AWS KMS returned this error: %s

  `ER_KEYRING_AWS_FAILED_TO_ENCRYPT_KEY` was added in 8.0.11.

- Error: `11440` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_RE_ENCRYPT_KEY`)

  Message: Could not re-encrypt key. AWS KMS returned this error: %s

  `ER_KEYRING_AWS_FAILED_TO_RE_ENCRYPT_KEY` was added in 8.0.11.

- Error: `11441` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_DECRYPT_KEY`)

  Message: Could not decrypt key. AWS KMS returned this error: %s

  `ER_KEYRING_AWS_FAILED_TO_DECRYPT_KEY` was added in 8.0.11.

- Error: `11442` SQLSTATE: `HY000` (`ER_KEYRING_AWS_FAILED_TO_ROTATE_CMK`)

  Message: Could not rotate the CMK. AWS KMS returned this error: %s

ER_KEYRING_AWS_FAILED_TO_ROTATE_CMK was added in 8.0.11.

- Error: 11443 SQLSTATE: HY000 (ER_GRP_RPL_GTID_ALREADY_USED)

  Message: The requested GTID '%s:%lld' was already used, the transaction will rollback.

  ER_GRP_RPL_GTID_ALREADY_USED was added in 8.0.11.

- Error: 11444 SQLSTATE: HY000 (ER_GRP_RPL_APPLIER_THD_KILLED)

  Message: The group replication applier thread was killed.

  ER_GRP_RPL_APPLIER_THD_KILLED was added in 8.0.11.

- Error: 11445 SQLSTATE: HY000 (ER_GRP_RPL_EVENT_HANDLING_ERROR)

  Message: Error at event handling! Got error: %d.

  ER_GRP_RPL_EVENT_HANDLING_ERROR was added in 8.0.11.

- Error: 11446 SQLSTATE: HY000 (ER_GRP_RPL_ERROR_GTID_EXECUTION_INFO)

  Message: Error when extracting group GTID execution information, some recovery operations may face future issues.

  ER_GRP_RPL_ERROR_GTID_EXECUTION_INFO was added in 8.0.11.

- Error: 11447 SQLSTATE: HY000 (ER_GRP_RPL_CERTIFICATE_SIZE_ERROR)

  Message: An error occurred when trying to reduce the Certification information size for transmission.

  ER_GRP_RPL_CERTIFICATE_SIZE_ERROR was added in 8.0.11.

- Error: 11448 SQLSTATE: HY000 (ER_GRP_RPL_CREATE_APPLIER_CACHE_ERROR)

  Message: Failed to create group replication pipeline applier cache!

  ER_GRP_RPL_CREATE_APPLIER_CACHE_ERROR was added in 8.0.11.

- Error: 11449 SQLSTATE: HY000 (ER_GRP_RPL_UNBLOCK_WAITING_THD)

  Message: Unblocking the group replication thread waiting for applier to start, as the start group replication was killed.

  ER_GRP_RPL_UNBLOCK_WAITING_THD was added in 8.0.11.

- Error: 11450 SQLSTATE: HY000 (ER_GRP_RPL_APPLIER_PIPELINE_NOT_DISPOSED)

  Message: The group replication applier pipeline was not properly disposed. Check the error log for further info.

  ER_GRP_RPL_APPLIER_PIPELINE_NOT_DISPOSED was added in 8.0.11.

- Error: 11451 SQLSTATE: HY000 (ER_GRP_RPL_APPLIER_THD_EXECUTION_ABORTED)

  Message: The applier thread execution was aborted. Unable to process more transactions, this member will now leave the group.

  ER_GRP_RPL_APPLIER_THD_EXECUTION_ABORTED was added in 8.0.11.

- Error: 11452 SQLSTATE: HY000 (ER_GRP_RPL_APPLIER_EXECUTION_FATAL_ERROR)

Message: Fatal error during execution on the Applier process of Group Replication. The server will now leave the group.

`ER_GRP_RPL_APPLIER_EXECUTION_FATAL_ERROR` was added in 8.0.11.

- Error: `11453` SQLSTATE: `HY000` (`ER_GRP_RPL_ERROR_STOPPING_CHANNELS`)

  Message: Error stopping all replication channels while server was leaving the group. %s

  `ER_GRP_RPL_ERROR_STOPPING_CHANNELS` was added in 8.0.11.

- Error: `11454` SQLSTATE: `HY000` (`ER_GRP_RPL_ERROR_SENDING_SINGLE_PRIMARY_MSSG`)

  Message: Error sending single primary message informing that primary did apply relay logs.

  `ER_GRP_RPL_ERROR_SENDING_SINGLE_PRIMARY_MSSG` was added in 8.0.11.

- Error: `11455` SQLSTATE: `HY000` (`ER_GRP_RPL_UPDATE_TRANS_SNAPSHOT_VER_ERROR`)

  Message: Error updating transaction snapshot version after transaction being positively certified.

  `ER_GRP_RPL_UPDATE_TRANS_SNAPSHOT_VER_ERROR` was added in 8.0.11.

- Error: `11456` SQLSTATE: `HY000` (`ER_GRP_RPL_SIDNO_FETCH_ERROR`)

  Message: Error fetching transaction sidno after transaction being positively certified.

  `ER_GRP_RPL_SIDNO_FETCH_ERROR` was added in 8.0.11.

- Error: `11457` SQLSTATE: `HY000` (`ER_GRP_RPL_BROADCAST_COMMIT_TRANS_MSSG_FAILED`)

  Message: Broadcast of committed transactions message failed.

  `ER_GRP_RPL_BROADCAST_COMMIT_TRANS_MSSG_FAILED` was added in 8.0.11.

- Error: `11458` SQLSTATE: `HY000` (`ER_GRP_RPL_GROUP_NAME_PARSE_ERROR`)

  Message: Unable to parse the group name during the Certification module initialization.

  `ER_GRP_RPL_GROUP_NAME_PARSE_ERROR` was added in 8.0.11.

- Error: `11459` SQLSTATE: `HY000` (`ER_GRP_RPL_ADD_GRPSID_TO_GRPGTIDSID_MAP_ERROR`)

  Message: Unable to add the group_sid in the group_gtid_sid_map during the Certification module initialization.

  `ER_GRP_RPL_ADD_GRPSID_TO_GRPGTIDSID_MAP_ERROR` was added in 8.0.11.

- Error: `11460` SQLSTATE: `HY000` (`ER_GRP_RPL_UPDATE_GRPGTID_EXECUTED_ERROR`)

  Message: Error updating group_gtid_executed GITD set during the Certification module initialization.

  `ER_GRP_RPL_UPDATE_GRPGTID_EXECUTED_ERROR` was added in 8.0.11.

- Error: `11461` SQLSTATE: `HY000` (`ER_GRP_RPL_DONOR_TRANS_INFO_ERROR`)

  Message: Unable to handle the donor's transaction information when initializing the conflict detection component. Possible out of memory error.

  `ER_GRP_RPL_DONOR_TRANS_INFO_ERROR` was added in 8.0.11.

- Error: `11462` SQLSTATE: `HY000` (`ER_GRP_RPL_SERVER_CONN_ERROR`)

Message: Error when establishing a server connection during the Certification module initialization.

ER_GRP_RPL_SERVER_CONN_ERROR was added in 8.0.11.

- Error: 11463 SQLSTATE: HY000 (ER_GRP_RPL_ERROR_FETCHING_GTID_EXECUTED_SET)

  Message: Error when extracting this member GTID executed set. Certification module can't be properly initialized.

  ER_GRP_RPL_ERROR_FETCHING_GTID_EXECUTED_SET was added in 8.0.11.

- Error: 11464 SQLSTATE: HY000 (ER_GRP_RPL_ADD_GTID_TO_GRPGTID_EXECUTED_ERROR)

  Message: Error while adding the server GTID EXECUTED set to the group_gtid_execute during the Certification module initialization.

  ER_GRP_RPL_ADD_GTID_TO_GRPGTID_EXECUTED_ERROR was added in 8.0.11.

- Error: 11465 SQLSTATE: HY000 (ER_GRP_RPL_ERROR_FETCHING_GTID_SET)

  Message: Error when extracting this member retrieved set for its applier. Certification module can't be properly initialized.

  ER_GRP_RPL_ERROR_FETCHING_GTID_SET was added in 8.0.11.

- Error: 11466 SQLSTATE: HY000 (ER_GRP_RPL_ADD_RETRIEVED_SET_TO_GRP_GTID_EXECUTED_ERROR)

  Message: Error while adding the member retrieved set to the group_gtid_executed during the Certification module initialization.

  ER_GRP_RPL_ADD_RETRIEVED_SET_TO_GRP_GTID_EXECUTED_ERROR was added in 8.0.11.

- Error: 11467 SQLSTATE: HY000 (ER_GRP_RPL_CERTIFICATION_INITIALIZATION_FAILURE)

  Message: Error during Certification module initialization.

  ER_GRP_RPL_CERTIFICATION_INITIALIZATION_FAILURE was added in 8.0.11.

- Error: 11468 SQLSTATE: HY000 (ER_GRP_RPL_UPDATE_LAST_CONFLICT_FREE_TRANS_ERROR)

  Message: Unable to update last conflict free transaction, this transaction will not be tracked on performance_schema.replication_group_member_stats.last_conflict_free_transaction.

  ER_GRP_RPL_UPDATE_LAST_CONFLICT_FREE_TRANS_ERROR was added in 8.0.11.

- Error: 11469 SQLSTATE: HY000 (ER_GRP_RPL_UPDATE_TRANS_SNAPSHOT_REF_VER_ERROR)

  Message: Error updating transaction snapshot version reference for internal storage.

  ER_GRP_RPL_UPDATE_TRANS_SNAPSHOT_REF_VER_ERROR was added in 8.0.11.

- Error: 11470 SQLSTATE: HY000 (ER_GRP_RPL_FETCH_TRANS_SIDNO_ERROR)

  Message: Error fetching transaction sidno while adding to the group_gtid_executed set.

  ER_GRP_RPL_FETCH_TRANS_SIDNO_ERROR was added in 8.0.11.

- Error: 11471 SQLSTATE: HY000 (ER_GRP_RPL_ERROR_VERIFYING_SIDNO)

  Message: Error while ensuring the sidno be present in the group_gtid_executed.

ER_GRP_RPL_ERROR_VERIFYING_SIDNO was added in 8.0.11.

- Error: 11472 SQLSTATE: HY000 (ER_GRP_RPL_CANT_GENERATE_GTID)

  Message: Impossible to generate Global Transaction Identifier: the integer component reached the maximal value. Restart the group with a new group_replication_group_name.

  ER_GRP_RPL_CANT_GENERATE_GTID was added in 8.0.11.

- Error: 11473 SQLSTATE: HY000 (ER_GRP_RPL_INVALID_GTID_SET)

  Message: Invalid stable transactions set.

  ER_GRP_RPL_INVALID_GTID_SET was added in 8.0.11.

- Error: 11474 SQLSTATE: HY000 (ER_GRP_RPL_UPDATE_GTID_SET_ERROR)

  Message: Error updating stable transactions set.

  ER_GRP_RPL_UPDATE_GTID_SET_ERROR was added in 8.0.11.

- Error: 11475 SQLSTATE: HY000 (ER_GRP_RPL_RECEIVED_SET_MISSING_GTIDS)

  Message: There was an error when filling the missing GTIDs on the applier channel received set. Despite not critical, on the long run this may cause performance issues.

  ER_GRP_RPL_RECEIVED_SET_MISSING_GTIDS was added in 8.0.11.

- Error: 11476 SQLSTATE: HY000 (ER_GRP_RPL_SKIP_COMPUTATION_TRANS_COMMITTED)

  Message: Skipping the computation of the Transactions_committed_all_members field as an older instance of this computation is still ongoing.

  ER_GRP_RPL_SKIP_COMPUTATION_TRANS_COMMITTED was added in 8.0.11.

- Error: 11477 SQLSTATE: HY000 (ER_GRP_RPL_NULL_PACKET)

  Message: Null packet on certifier's queue.

  ER_GRP_RPL_NULL_PACKET was added in 8.0.11.

- Error: 11478 SQLSTATE: HY000 (ER_GRP_RPL_CANT_READ_GTID)

  Message: Error reading GTIDs from the message.

  ER_GRP_RPL_CANT_READ_GTID was added in 8.0.11.

- Error: 11479 SQLSTATE: HY000 (ER_GRP_RPL_PROCESS_GTID_SET_ERROR)

  Message: Error processing stable transactions set.

  ER_GRP_RPL_PROCESS_GTID_SET_ERROR was added in 8.0.11.

- Error: 11480 SQLSTATE: HY000 (ER_GRP_RPL_PROCESS_INTERSECTION_GTID_SET_ERROR)

  Message: Error processing intersection of stable transactions set.

  ER_GRP_RPL_PROCESS_INTERSECTION_GTID_SET_ERROR was added in 8.0.11.

- Error: 11481 SQLSTATE: HY000 (ER_GRP_RPL_SET_STABLE_TRANS_ERROR)

  Message: Error setting stable transactions set.

ER_GRP_RPL_SET_STABLE_TRANS_ERROR was added in 8.0.11.

- Error: 11482 SQLSTATE: HY000 (ER_GRP_RPL_CANT_READ_GRP_GTID_EXTRACTED)

  Message: Error reading group_gtid_extracted from the View_change_log_event.

  ER_GRP_RPL_CANT_READ_GRP_GTID_EXTRACTED was added in 8.0.11.

- Error: 11483 SQLSTATE: HY000 (ER_GRP_RPL_CANT_READ_WRITE_SET_ITEM)

  Message: Error reading the write set item '%s' from the View_change_log_event.

  ER_GRP_RPL_CANT_READ_WRITE_SET_ITEM was added in 8.0.11.

- Error: 11484 SQLSTATE: HY000 (ER_GRP_RPL_INIT_CERTIFICATION_INFO_FAILURE)

  Message: Error during certification_info initialization.

  ER_GRP_RPL_INIT_CERTIFICATION_INFO_FAILURE was added in 8.0.11.

- Error: 11485 SQLSTATE: HY000 (ER_GRP_RPL_CONFLICT_DETECTION_DISABLED)

  Message: Primary had applied all relay logs, disabled conflict detection.

  ER_GRP_RPL_CONFLICT_DETECTION_DISABLED was added in 8.0.11.

- Error: 11486 SQLSTATE: HY000 (ER_GRP_RPL_MSG_DISCARDED)

  Message: Message received while the plugin is not ready, message discarded.

  ER_GRP_RPL_MSG_DISCARDED was added in 8.0.11.

- Error: 11487 SQLSTATE: HY000 (ER_GRP_RPL_MISSING_GRP_RPL_APPLIER)

  Message: Message received without a proper group replication applier.

  ER_GRP_RPL_MISSING_GRP_RPL_APPLIER was added in 8.0.11.

- Error: 11488 SQLSTATE: HY000 (ER_GRP_RPL_CERTIFIER_MSSG_PROCESS_ERROR)

  Message: Error processing message in Certifier.

  ER_GRP_RPL_CERTIFIER_MSSG_PROCESS_ERROR was added in 8.0.11.

- Error: 11489 SQLSTATE: HY000 (ER_GRP_RPL_SRV_NOT_ONLINE)

  Message: This server was not declared online since it is on status %s.

  ER_GRP_RPL_SRV_NOT_ONLINE was added in 8.0.11.

- Error: 11490 SQLSTATE: HY000 (ER_GRP_RPL_SRV_ONLINE)

  Message: This server was declared online within the replication group.

  ER_GRP_RPL_SRV_ONLINE was added in 8.0.11.

- Error: 11491 SQLSTATE: HY000 (ER_GRP_RPL_DISABLE_SRV_READ_MODE_RESTRICTED)

  Message: When declaring the plugin online it was not possible to disable the server read mode settings. Try to disable it manually.

  ER_GRP_RPL_DISABLE_SRV_READ_MODE_RESTRICTED was added in 8.0.11.

- Error: 11492 SQLSTATE: HY000 (ER_GRP_RPL_MEM_ONLINE)

Message: The member with address %s:%u was declared online within the replication group.

`ER_GRP_RPL_MEM_ONLINE` was added in 8.0.11.

- Error: `11493` SQLSTATE: `HY000` (`ER_GRP_RPL_MEM_UNREACHABLE`)

  Message: Member with address %s:%u has become unreachable.

  `ER_GRP_RPL_MEM_UNREACHABLE` was added in 8.0.11.

- Error: `11494` SQLSTATE: `HY000` (`ER_GRP_RPL_MEM_REACHABLE`)

  Message: Member with address %s:%u is reachable again.

  `ER_GRP_RPL_MEM_REACHABLE` was added in 8.0.11.

- Error: `11495` SQLSTATE: `HY000` (`ER_GRP_RPL_SRV_BLOCKED`)

  Message: This server is not able to reach a majority of members in the group. This server will now block all updates. The server will remain blocked until contact with the majority is restored. It is possible to use group_replication_force_members to force a new group membership.

  `ER_GRP_RPL_SRV_BLOCKED` was added in 8.0.11.

- Error: `11496` SQLSTATE: `HY000` (`ER_GRP_RPL_SRV_BLOCKED_FOR_SECS`)

  Message: This server is not able to reach a majority of members in the group. This server will now block all updates. The server will remain blocked for the next %lu seconds. Unless contact with the majority is restored, after this time the member will error out and leave the group. It is possible to use group_replication_force_members to force a new group membership.

  `ER_GRP_RPL_SRV_BLOCKED_FOR_SECS` was added in 8.0.11.

- Error: `11497` SQLSTATE: `HY000` (`ER_GRP_RPL_CHANGE_GRP_MEM_NOT_PROCESSED`)

  Message: A group membership change was received but the plugin is already leaving due to the configured timeout on group_replication_unreachable_majority_timeout option.

  `ER_GRP_RPL_CHANGE_GRP_MEM_NOT_PROCESSED` was added in 8.0.11.

- Error: `11498` SQLSTATE: `HY000` (`ER_GRP_RPL_MEMBER_CONTACT_RESTORED`)

  Message: The member has resumed contact with a majority of the members in the group. Regular operation is restored and transactions are unblocked.

  `ER_GRP_RPL_MEMBER_CONTACT_RESTORED` was added in 8.0.11.

- Error: `11499` SQLSTATE: `HY000` (`ER_GRP_RPL_MEMBER_REMOVED`)

  Message: Members removed from the group: %s

  `ER_GRP_RPL_MEMBER_REMOVED` was added in 8.0.11.

- Error: `11500` SQLSTATE: `HY000` (`ER_GRP_RPL_PRIMARY_MEMBER_LEFT_GRP`)

  Message: Primary server with address %s left the group. Electing new Primary.

  `ER_GRP_RPL_PRIMARY_MEMBER_LEFT_GRP` was added in 8.0.11.

- Error: `11501` SQLSTATE: `HY000` (`ER_GRP_RPL_MEMBER_ADDED`)

  Message: Members joined the group: %s

ER_GRP_RPL_MEMBER_ADDED was added in 8.0.11.

- Error: 11502 SQLSTATE: HY000 (ER_GRP_RPL_MEMBER_EXIT_PLUGIN_ERROR)

  Message: There was a previous plugin error while the member joined the group. The member will now exit the group.

  ER_GRP_RPL_MEMBER_EXIT_PLUGIN_ERROR was added in 8.0.11.

- Error: 11503 SQLSTATE: HY000 (ER_GRP_RPL_MEMBER_CHANGE)

  Message: Group membership changed to %s on view %s.

  ER_GRP_RPL_MEMBER_CHANGE was added in 8.0.11.

- Error: 11504 SQLSTATE: HY000 (ER_GRP_RPL_MEMBER_LEFT_GRP)

  Message: Group membership changed: This member has left the group.

  ER_GRP_RPL_MEMBER_LEFT_GRP was added in 8.0.11.

- Error: 11505 SQLSTATE: HY000 (ER_GRP_RPL_MEMBER_EXPELLED)

  Message: Member was expelled from the group due to network failures, changing member status to ERROR.

  ER_GRP_RPL_MEMBER_EXPELLED was added in 8.0.11.

- Error: 11506 SQLSTATE: HY000 (ER_GRP_RPL_SESSION_OPEN_FAILED)

  Message: Unable to open session to (re)set read only mode. Skipping.

  ER_GRP_RPL_SESSION_OPEN_FAILED was added in 8.0.11.

- Error: 11507 SQLSTATE: HY000 (ER_GRP_RPL_NEW_PRIMARY_ELECTED)

  Message: A new primary with address %s:%u was elected. %s

  ER_GRP_RPL_NEW_PRIMARY_ELECTED was added in 8.0.11.

- Error: 11508 SQLSTATE: HY000 (ER_GRP_RPL_DISABLE_READ_ONLY_FAILED)

  Message: Unable to disable super read only flag. Try to disable it manually

  ER_GRP_RPL_DISABLE_READ_ONLY_FAILED was added in 8.0.11.

- Error: 11509 SQLSTATE: HY000 (ER_GRP_RPL_ENABLE_READ_ONLY_FAILED)

  Message: Unable to set super read only flag. Try to set it manually.

  ER_GRP_RPL_ENABLE_READ_ONLY_FAILED was added in 8.0.11.

- Error: 11510 SQLSTATE: HY000 (ER_GRP_RPL_SRV_PRIMARY_MEM)

  Message: This server is working as primary member.

  ER_GRP_RPL_SRV_PRIMARY_MEM was added in 8.0.11.

- Error: 11511 SQLSTATE: HY000 (ER_GRP_RPL_SRV_SECONDARY_MEM)

  Message: This server is working as secondary member with primary member address %s:%u.

  ER_GRP_RPL_SRV_SECONDARY_MEM was added in 8.0.11.

- Error: 11512 SQLSTATE: HY000 (ER_GRP_RPL_NO_SUITABLE_PRIMARY_MEM)

  Message: Unable to set any member as primary. No suitable candidate.

  ER_GRP_RPL_NO_SUITABLE_PRIMARY_MEM was added in 8.0.11.

- Error: 11513 SQLSTATE: HY000 (ER_GRP_RPL_SUPER_READ_ONLY_ACTIVATE_ERROR)

  Message: Error when activating super_read_only mode on start. The member will now exit the group.

  ER_GRP_RPL_SUPER_READ_ONLY_ACTIVATE_ERROR was added in 8.0.11.

- Error: 11514 SQLSTATE: HY000 (ER_GRP_RPL_EXCEEDS_AUTO_INC_VALUE)

  Message: Group contains %lu members which is greater than group_replication_auto_increment_increment value of %lu. This can lead to an higher rate of transactional aborts.

  ER_GRP_RPL_EXCEEDS_AUTO_INC_VALUE was added in 8.0.11.

- Error: 11515 SQLSTATE: HY000 (ER_GRP_RPL_DATA_NOT_PROVIDED_BY_MEM)

  Message: Member with address '%s:%u' didn't provide any data during the last group change. Group information can be outdated and lead to errors on recovery.

  ER_GRP_RPL_DATA_NOT_PROVIDED_BY_MEM was added in 8.0.11.

- Error: 11516 SQLSTATE: HY000 (ER_GRP_RPL_MEMBER_ALREADY_EXISTS)

  Message: There is already a member with server_uuid %s. The member will now exit the group.

  ER_GRP_RPL_MEMBER_ALREADY_EXISTS was added in 8.0.11.

- Error: 11517 SQLSTATE: HY000 (ER_GRP_RPL_GRP_CHANGE_INFO_EXTRACT_ERROR)

  Message: Error when extracting information for group change. Operations and checks made to group joiners may be incomplete.

  ER_GRP_RPL_GRP_CHANGE_INFO_EXTRACT_ERROR was added in 8.0.11.

- Error: 11518 SQLSTATE: HY000 (ER_GRP_RPL_GTID_EXECUTED_EXTRACT_ERROR)

  Message: Error when extracting this member GTID executed set. Operations and checks made to group joiners may be incomplete.

  ER_GRP_RPL_GTID_EXECUTED_EXTRACT_ERROR was added in 8.0.11.

- Error: 11519 SQLSTATE: HY000 (ER_GRP_RPL_GTID_SET_EXTRACT_ERROR)

  Message: Error when extracting this member retrieved set for its applier. Operations and checks made to group joiners may be incomplete.

  ER_GRP_RPL_GTID_SET_EXTRACT_ERROR was added in 8.0.11.

- Error: 11520 SQLSTATE: HY000 (ER_GRP_RPL_START_FAILED)

  Message: The START GROUP_REPLICATION command failed since the group already has 9 members.

  ER_GRP_RPL_START_FAILED was added in 8.0.11.

- Error: 11521 SQLSTATE: HY000 (ER_GRP_RPL_MEMBER_VER_INCOMPATIBLE)

Message: Member version is incompatible with the group.

ER_GRP_RPL_MEMBER_VER_INCOMPATIBLE was added in 8.0.11.

- Error: 11522 SQLSTATE: HY000 (ER_GRP_RPL_TRANS_NOT_PRESENT_IN_GRP)

  Message: The member contains transactions not present in the group. The member will now exit the group.

  ER_GRP_RPL_TRANS_NOT_PRESENT_IN_GRP was added in 8.0.11.

- Error: 11523 SQLSTATE: HY000 (ER_GRP_RPL_TRANS_GREATER_THAN_GRP)

  Message: It was not possible to assess if the member has more transactions than the group. The member will now exit the group.

  ER_GRP_RPL_TRANS_GREATER_THAN_GRP was added in 8.0.11.

- Error: 11524 SQLSTATE: HY000 (ER_GRP_RPL_MEMBER_VERSION_LOWER_THAN_GRP)

  Message: Member version is lower than some group member, but since option 'group_replication_allow_local_lower_version_join is enabled, member will be allowed to join.

  ER_GRP_RPL_MEMBER_VERSION_LOWER_THAN_GRP was added in 8.0.11.

- Error: 11525 SQLSTATE: HY000 (ER_GRP_RPL_LOCAL_GTID_SETS_PROCESS_ERROR)

  Message: Error processing local GTID sets when comparing this member transactions against the group.

  ER_GRP_RPL_LOCAL_GTID_SETS_PROCESS_ERROR was added in 8.0.11.

- Error: 11526 SQLSTATE: HY000 (ER_GRP_RPL_MEMBER_TRANS_GREATER_THAN_GRP)

  Message: This member has more executed transactions than those present in the group. Local transactions: %s > Group transactions: %s

  ER_GRP_RPL_MEMBER_TRANS_GREATER_THAN_GRP was added in 8.0.11.

- Error: 11527 SQLSTATE: HY000 (ER_GRP_RPL_BLOCK_SIZE_DIFF_FROM_GRP)

  Message: The member is configured with a group_replication_gtid_assignment_block_size option value '%llu' different from the group '%llu'. The member will now exit the group.

  ER_GRP_RPL_BLOCK_SIZE_DIFF_FROM_GRP was added in 8.0.11.

- Error: 11528 SQLSTATE: HY000 (ER_GRP_RPL_TRANS_WRITE_SET_EXTRACT_DIFF_FROM_GRP)

  Message: The member is configured with a transaction-write-set-extraction option value '%s' different from the group '%s'. The member will now exit the group.

  ER_GRP_RPL_TRANS_WRITE_SET_EXTRACT_DIFF_FROM_GRP was added in 8.0.11.

- Error: 11529 SQLSTATE: HY000 (ER_GRP_RPL_MEMBER_CFG_INCOMPATIBLE_WITH_GRP_CFG)

  Message: The member configuration is not compatible with the group configuration. Variables such as single_primary_mode or enforce_update_everywhere_checks must have the same value on every server in the group. (member configuration option: [%s], group configuration option: [%s]).

  ER_GRP_RPL_MEMBER_CFG_INCOMPATIBLE_WITH_GRP_CFG was added in 8.0.11.

- Error: 11530 SQLSTATE: HY000 (ER_GRP_RPL_MEMBER_STOP_RPL_CHANNELS_ERROR)

Message: Error stopping all replication channels while server was leaving the group. %s

ER_GRP_RPL_MEMBER_STOP_RPL_CHANNELS_ERROR was added in 8.0.11.

- Error: 11531 SQLSTATE: HY000 (ER_GRP_RPL_PURGE_APPLIER_LOGS)

  Message: Detected previous RESET MASTER invocation or an issue exists in the group replication applier relay log. Purging existing applier logs.

  ER_GRP_RPL_PURGE_APPLIER_LOGS was added in 8.0.11.

- Error: 11532 SQLSTATE: HY000 (ER_GRP_RPL_RESET_APPLIER_MODULE_LOGS_ERROR)

  Message: Unknown error occurred while resetting applier's module logs.

  ER_GRP_RPL_RESET_APPLIER_MODULE_LOGS_ERROR was added in 8.0.11.

- Error: 11533 SQLSTATE: HY000 (ER_GRP_RPL_APPLIER_THD_SETUP_ERROR)

  Message: Failed to setup the group replication applier thread.

  ER_GRP_RPL_APPLIER_THD_SETUP_ERROR was added in 8.0.11.

- Error: 11534 SQLSTATE: HY000 (ER_GRP_RPL_APPLIER_THD_START_ERROR)

  Message: Error while starting the group replication applier thread

  ER_GRP_RPL_APPLIER_THD_START_ERROR was added in 8.0.11.

- Error: 11535 SQLSTATE: HY000 (ER_GRP_RPL_APPLIER_THD_STOP_ERROR)

  Message: Failed to stop the group replication applier thread.

  ER_GRP_RPL_APPLIER_THD_STOP_ERROR was added in 8.0.11.

- Error: 11536 SQLSTATE: HY000 (ER_GRP_RPL_FETCH_TRANS_DATA_FAILED)

  Message: Failed to fetch transaction data containing required transaction info for applier

  ER_GRP_RPL_FETCH_TRANS_DATA_FAILED was added in 8.0.11.

- Error: 11537 SQLSTATE: HY000 (ER_GRP_RPL_SLAVE_IO_THD_PRIMARY_UNKNOWN)

  Message: Can't start slave IO THREAD of channel '%s' when group replication is running with single-primary mode and the primary member is not known.

  ER_GRP_RPL_SLAVE_IO_THD_PRIMARY_UNKNOWN was added in 8.0.11.

- Error: 11538 SQLSTATE: HY000 (ER_GRP_RPL_SALVE_IO_THD_ON_SECONDARY_MEMBER)

  Message: Can't start slave IO THREAD of channel '%s' when group replication is running with single-primary mode on a secondary member.

  ER_GRP_RPL_SALVE_IO_THD_ON_SECONDARY_MEMBER was added in 8.0.11.

- Error: 11539 SQLSTATE: HY000 (ER_GRP_RPL_SLAVE_SQL_THD_PRIMARY_UNKNOWN)

  Message: Can't start slave SQL THREAD of channel '%s' when group replication is running with single-primary mode and the primary member is not known.

  ER_GRP_RPL_SLAVE_SQL_THD_PRIMARY_UNKNOWN was added in 8.0.11.

- Error: 11540 SQLSTATE: HY000 (ER_GRP_RPL_SLAVE_SQL_THD_ON_SECONDARY_MEMBER)

Message: Can't start slave SQL THREAD of channel '%s' when group replication is running with single-primary mode on a secondary member.

ER_GRP_RPL_SLAVE_SQL_THD_ON_SECONDARY_MEMBER was added in 8.0.11.

- Error: 11541 SQLSTATE: HY000 (ER_GRP_RPL_NEEDS_INNODB_TABLE)

  Message: Table %s does not use the InnoDB storage engine. This is not compatible with Group Replication.

  ER_GRP_RPL_NEEDS_INNODB_TABLE was added in 8.0.11.

- Error: 11542 SQLSTATE: HY000 (ER_GRP_RPL_PRIMARY_KEY_NOT_DEFINED)

  Message: Table %s does not have any PRIMARY KEY. This is not compatible with Group Replication.

  ER_GRP_RPL_PRIMARY_KEY_NOT_DEFINED was added in 8.0.11.

- Error: 11543 SQLSTATE: HY000 (ER_GRP_RPL_FK_WITH_CASCADE_UNSUPPORTED)

  Message: Table %s has a foreign key with 'CASCADE' clause. This is not compatible with Group Replication.

  ER_GRP_RPL_FK_WITH_CASCADE_UNSUPPORTED was added in 8.0.11.

- Error: 11544 SQLSTATE: HY000 (ER_GRP_RPL_AUTO_INC_RESET)

  Message: auto_increment_increment is reset to %lu

  ER_GRP_RPL_AUTO_INC_RESET was added in 8.0.11.

- Error: 11545 SQLSTATE: HY000 (ER_GRP_RPL_AUTO_INC_OFFSET_RESET)

  Message: auto_increment_offset is reset to %lu

  ER_GRP_RPL_AUTO_INC_OFFSET_RESET was added in 8.0.11.

- Error: 11546 SQLSTATE: HY000 (ER_GRP_RPL_AUTO_INC_SET)

  Message: auto_increment_increment is set to %lu

  ER_GRP_RPL_AUTO_INC_SET was added in 8.0.11.

- Error: 11547 SQLSTATE: HY000 (ER_GRP_RPL_AUTO_INC_OFFSET_SET)

  Message: auto_increment_offset is set to %lu

  ER_GRP_RPL_AUTO_INC_OFFSET_SET was added in 8.0.11.

- Error: 11548 SQLSTATE: HY000 (ER_GRP_RPL_FETCH_TRANS_CONTEXT_FAILED)

  Message: Failed to fetch transaction context containing required transaction info for certification

  ER_GRP_RPL_FETCH_TRANS_CONTEXT_FAILED was added in 8.0.11.

- Error: 11549 SQLSTATE: HY000 (ER_GRP_RPL_FETCH_FORMAT_DESC_LOG_EVENT_FAILED)

  Message: Failed to fetch Format_description_log_event containing required server info for applier

  ER_GRP_RPL_FETCH_FORMAT_DESC_LOG_EVENT_FAILED was added in 8.0.11.

- Error: 11550 SQLSTATE: HY000 (ER_GRP_RPL_FETCH_TRANS_CONTEXT_LOG_EVENT_FAILED)

Message: Failed to fetch Transaction_context_log_event containing required transaction info for certification

`ER_GRP_RPL_FETCH_TRANS_CONTEXT_LOG_EVENT_FAILED` was added in 8.0.11.

- Error: `11551` SQLSTATE: `HY000` (`ER_GRP_RPL_FETCH_SNAPSHOT_VERSION_FAILED`)

  Message: Failed to read snapshot version from transaction context event required for certification

  `ER_GRP_RPL_FETCH_SNAPSHOT_VERSION_FAILED` was added in 8.0.11.

- Error: `11552` SQLSTATE: `HY000` (`ER_GRP_RPL_FETCH_GTID_LOG_EVENT_FAILED`)

  Message: Failed to fetch Gtid_log_event containing required transaction info for certification

  `ER_GRP_RPL_FETCH_GTID_LOG_EVENT_FAILED` was added in 8.0.11.

- Error: `11553` SQLSTATE: `HY000` (`ER_GRP_RPL_UPDATE_SERV_CERTIFICATE_FAILED`)

  Message: Unable to update certification result on server side, thread_id: %lu

  `ER_GRP_RPL_UPDATE_SERV_CERTIFICATE_FAILED` was added in 8.0.11.

- Error: `11554` SQLSTATE: `HY000` (`ER_GRP_RPL_ADD_GTID_INFO_WITH_LOCAL_GTID_FAILED`)

  Message: Unable to add gtid information to the group_gtid_executed set when gtid was provided for local transactions

  `ER_GRP_RPL_ADD_GTID_INFO_WITH_LOCAL_GTID_FAILED` was added in 8.0.11.

- Error: `11555` SQLSTATE: `HY000` (`ER_GRP_RPL_ADD_GTID_INFO_WITHOUT_LOCAL_GTID_FAILED`)

  Message: Unable to add gtid information to the group_gtid_executed set when no gtid was provided for local transactions

  `ER_GRP_RPL_ADD_GTID_INFO_WITHOUT_LOCAL_GTID_FAILED` was added in 8.0.11.

- Error: `11556` SQLSTATE: `HY000` (`ER_GRP_RPL_NOTIFY_CERTIFICATION_OUTCOME_FAILED`)

  Message: Failed to notify certification outcome

  `ER_GRP_RPL_NOTIFY_CERTIFICATION_OUTCOME_FAILED` was added in 8.0.11.

- Error: `11557` SQLSTATE: `HY000` (`ER_GRP_RPL_ADD_GTID_INFO_WITH_REMOTE_GTID_FAILED`)

  Message: Unable to add gtid information to the group_gtid_executed set when gtid was provided for remote transactions

  `ER_GRP_RPL_ADD_GTID_INFO_WITH_REMOTE_GTID_FAILED` was added in 8.0.11.

- Error: `11558` SQLSTATE: `HY000` (`ER_GRP_RPL_ADD_GTID_INFO_WITHOUT_REMOTE_GTID_FAILED`)

  Message: Unable to add gtid information to the group_gtid_executed set when gtid was not provided for remote transactions

  `ER_GRP_RPL_ADD_GTID_INFO_WITHOUT_REMOTE_GTID_FAILED` was added in 8.0.11.

- Error: `11559` SQLSTATE: `HY000` (`ER_GRP_RPL_FETCH_VIEW_CHANGE_LOG_EVENT_FAILED`)

  Message: Failed to fetch View_change_log_event containing required info for certification

ER_GRP_RPL_FETCH_VIEW_CHANGE_LOG_EVENT_FAILED was added in 8.0.11.

- Error: 11560 SQLSTATE: HY000 (ER_GRP_RPL_CONTACT_WITH_SRV_FAILED)

  Message: Error when contacting the server to ensure the proper logging of a group change in the binlog

  ER_GRP_RPL_CONTACT_WITH_SRV_FAILED was added in 8.0.11.

- Error: 11561 SQLSTATE: HY000 (ER_GRP_RPL_SRV_WAIT_TIME_OUT)

  Message: Timeout when waiting for the server to execute local transactions in order assure the group change proper logging

  ER_GRP_RPL_SRV_WAIT_TIME_OUT was added in 8.0.11.

- Error: 11562 SQLSTATE: HY000 (ER_GRP_RPL_FETCH_LOG_EVENT_FAILED)

  Message: Failed to fetch Log_event containing required server info for applier

  ER_GRP_RPL_FETCH_LOG_EVENT_FAILED was added in 8.0.11.

- Error: 11563 SQLSTATE: HY000 (ER_GRP_RPL_START_GRP_RPL_FAILED)

  Message: Unable to start Group Replication. Replication applier infrastructure is not initialized since the server was started with --initialize or --initialize-insecure.

  ER_GRP_RPL_START_GRP_RPL_FAILED was added in 8.0.11.

- Error: 11564 SQLSTATE: HY000 (ER_GRP_RPL_CONN_INTERNAL_PLUGIN_FAIL)

  Message: Failed to establish an internal server connection to execute plugin operations

  ER_GRP_RPL_CONN_INTERNAL_PLUGIN_FAIL was added in 8.0.11.

- Error: 11565 SQLSTATE: HY000 (ER_GRP_RPL_SUPER_READ_ON)

  Message: Setting super_read_only=ON.

  ER_GRP_RPL_SUPER_READ_ON was added in 8.0.11.

- Error: 11566 SQLSTATE: HY000 (ER_GRP_RPL_SUPER_READ_OFF)

  Message: Setting super_read_only=OFF.

  ER_GRP_RPL_SUPER_READ_OFF was added in 8.0.11.

- Error: 11567 SQLSTATE: HY000 (ER_GRP_RPL_KILLED_SESSION_ID)

  Message: killed session id: %d status: %d

  ER_GRP_RPL_KILLED_SESSION_ID was added in 8.0.11.

- Error: 11568 SQLSTATE: HY000 (ER_GRP_RPL_KILLED_FAILED_ID)

  Message: killed failed id: %d failed: %d

  ER_GRP_RPL_KILLED_FAILED_ID was added in 8.0.11.

- Error: 11569 SQLSTATE: HY000 (ER_GRP_RPL_INTERNAL_QUERY)

  Message: Internal query: %s result in error. Error number: %ld

ER_GRP_RPL_INTERNAL_QUERY was added in 8.0.11.

- Error: 11570 SQLSTATE: HY000 (ER_GRP_RPL_COPY_FROM_EMPTY_STRING)

  Message: Error copying from empty string

  ER_GRP_RPL_COPY_FROM_EMPTY_STRING was added in 8.0.11.

- Error: 11571 SQLSTATE: HY000 (ER_GRP_RPL_QUERY_FAIL)

  Message: Query execution resulted in failure. errno: %d

  ER_GRP_RPL_QUERY_FAIL was added in 8.0.11.

- Error: 11572 SQLSTATE: HY000 (ER_GRP_RPL_CREATE_SESSION_UNABLE)

  Message: Unable to create a session for executing the queries on the server

  ER_GRP_RPL_CREATE_SESSION_UNABLE was added in 8.0.11.

- Error: 11573 SQLSTATE: HY000 (ER_GRP_RPL_MEMBER_NOT_FOUND)

  Message: The member with address %s:%u has unexpectedly disappeared, killing the current group replication recovery connection

  ER_GRP_RPL_MEMBER_NOT_FOUND was added in 8.0.11.

- Error: 11574 SQLSTATE: HY000 (ER_GRP_RPL_MAXIMUM_CONNECTION_RETRIES_REACHED)

  Message: Maximum number of retries when trying to connect to a donor reached. Aborting group replication recovery.

  ER_GRP_RPL_MAXIMUM_CONNECTION_RETRIES_REACHED was added in 8.0.11.

- Error: 11575 SQLSTATE: HY000 (ER_GRP_RPL_ALL_DONORS_LEFT_ABORT_RECOVERY)

  Message: All donors left. Aborting group replication recovery.

  ER_GRP_RPL_ALL_DONORS_LEFT_ABORT_RECOVERY was added in 8.0.11.

- Error: 11576 SQLSTATE: HY000 (ER_GRP_RPL_ESTABLISH_RECOVERY_WITH_DONOR)

  Message: Establishing group recovery connection with a possible donor. Attempt %d/%d

  ER_GRP_RPL_ESTABLISH_RECOVERY_WITH_DONOR was added in 8.0.11.

- Error: 11577 SQLSTATE: HY000 (ER_GRP_RPL_ESTABLISH_RECOVERY_WITH_ANOTHER_DONOR)

  Message: Retrying group recovery connection with another donor. Attempt %d/%d

  ER_GRP_RPL_ESTABLISH_RECOVERY_WITH_ANOTHER_DONOR was added in 8.0.11.

- Error: 11578 SQLSTATE: HY000 (ER_GRP_RPL_NO_VALID_DONOR)

  Message: No valid donors exist in the group, retrying

  ER_GRP_RPL_NO_VALID_DONOR was added in 8.0.11.

- Error: 11579 SQLSTATE: HY000 (ER_GRP_RPL_CONFIG_RECOVERY)

  Message: Error when configuring the group recovery connection to the donor.

ER_GRP_RPL_CONFIG_RECOVERY was added in 8.0.11.

- Error: 11580 SQLSTATE: HY000 (ER_GRP_RPL_ESTABLISHING_CONN_GRP_REC_DONOR)

  Message: Establishing connection to a group replication recovery donor %s at %s port: %d.

  ER_GRP_RPL_ESTABLISHING_CONN_GRP_REC_DONOR was added in 8.0.11.

- Error: 11581 SQLSTATE: HY000 (ER_GRP_RPL_CREATE_GRP_RPL_REC_CHANNEL)

  Message: Error while creating the group replication recovery channel with donor %s at %s port: %d.

  ER_GRP_RPL_CREATE_GRP_RPL_REC_CHANNEL was added in 8.0.11.

- Error: 11582 SQLSTATE: HY000 (ER_GRP_RPL_DONOR_SERVER_CONN)

  Message: There was an error when connecting to the donor server. Please check that group_replication_recovery channel credentials and all MEMBER_HOST column values of performance_schema.replication_group_members table are correct and DNS resolvable.

  ER_GRP_RPL_DONOR_SERVER_CONN was added in 8.0.11.

- Error: 11583 SQLSTATE: HY000 (ER_GRP_RPL_CHECK_STATUS_TABLE)

  Message: For details please check performance_schema.replication_connection_status table and error log messages of Slave I/O for channel group_replication_recovery.

  ER_GRP_RPL_CHECK_STATUS_TABLE was added in 8.0.11.

- Error: 11584 SQLSTATE: HY000 (ER_GRP_RPL_STARTING_GRP_REC)

  Message: Error while starting the group replication recovery receiver/applier threads

  ER_GRP_RPL_STARTING_GRP_REC was added in 8.0.11.

- Error: 11585 SQLSTATE: HY000 (ER_GRP_RPL_DONOR_CONN_TERMINATION)

  Message: Terminating existing group replication donor connection and purging the corresponding logs.

  ER_GRP_RPL_DONOR_CONN_TERMINATION was added in 8.0.11.

- Error: 11586 SQLSTATE: HY000 (ER_GRP_RPL_STOPPING_GRP_REC)

  Message: Error when stopping the group replication recovery's donor connection

  ER_GRP_RPL_STOPPING_GRP_REC was added in 8.0.11.

- Error: 11587 SQLSTATE: HY000 (ER_GRP_RPL_PURGE_REC)

  Message: Error when purging the group replication recovery's relay logs

  ER_GRP_RPL_PURGE_REC was added in 8.0.11.

- Error: 11588 SQLSTATE: HY000 (ER_GRP_RPL_UNABLE_TO_KILL_CONN_REC_DONOR_APPLIER)

  Message: Unable to kill the current group replication recovery donor connection after an applier error. Recovery will shutdown.

  ER_GRP_RPL_UNABLE_TO_KILL_CONN_REC_DONOR_APPLIER was added in 8.0.11.

- Error: 11589 SQLSTATE: HY000 (ER_GRP_RPL_UNABLE_TO_KILL_CONN_REC_DONOR_FAILOVER)

  Message: Unable to kill the current group replication recovery donor connection during failover. Recovery will shutdown.

  ER_GRP_RPL_UNABLE_TO_KILL_CONN_REC_DONOR_FAILOVER was added in 8.0.11.

- Error: 11590 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_NOTIFY_GRP_MEMBERSHIP_EVENT)

  Message: Unexpected error when notifying an internal component named %s regarding a group membership event.

  ER_GRP_RPL_FAILED_TO_NOTIFY_GRP_MEMBERSHIP_EVENT was added in 8.0.11.

- Error: 11591 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_BROADCAST_GRP_MEMBERSHIP_NOTIFICATION)

  Message: An undefined error was found while broadcasting an internal group membership notification! This is likely to happen if your components or plugins are not properly loaded or are malfunctioning!

  ER_GRP_RPL_FAILED_TO_BROADCAST_GRP_MEMBERSHIP_NOTIFICATION was added in 8.0.11.

- Error: 11592 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_BROADCAST_MEMBER_STATUS_NOTIFICATION)

  Message: An undefined error was found while broadcasting an internal group member status notification! This is likely to happen if your components or plugins are not properly loaded or are malfunctioning!

  ER_GRP_RPL_FAILED_TO_BROADCAST_MEMBER_STATUS_NOTIFICATION was added in 8.0.11.

- Error: 11593 SQLSTATE: HY000 (ER_GRP_RPL_OOM_FAILED_TO_GENERATE_IDENTIFICATION_HASH)

  Message: No memory to generate write identification hash

  ER_GRP_RPL_OOM_FAILED_TO_GENERATE_IDENTIFICATION_HASH was added in 8.0.11.

- Error: 11594 SQLSTATE: HY000 (ER_GRP_RPL_WRITE_IDENT_HASH_BASE64_ENCODING_FAILED)

  Message: Base 64 encoding of the write identification hash failed

  ER_GRP_RPL_WRITE_IDENT_HASH_BASE64_ENCODING_FAILED was added in 8.0.11.

- Error: 11595 SQLSTATE: HY000 (ER_GRP_RPL_INVALID_BINLOG_FORMAT)

  Message: Binlog format should be ROW for Group Replication

  ER_GRP_RPL_INVALID_BINLOG_FORMAT was added in 8.0.11.

- Error: 11596 SQLSTATE: HY000 (ER_GRP_RPL_BINLOG_CHECKSUM_SET)

  Message: binlog_checksum should be NONE for Group Replication

  ER_GRP_RPL_BINLOG_CHECKSUM_SET was added in 8.0.11.

- Error: 11597 SQLSTATE: HY000 (ER_GRP_RPL_TRANS_WRITE_SET_EXTRACTION_NOT_SET)

Message: A transaction_write_set_extraction algorithm should be selected when running Group Replication

`ER_GRP_RPL_TRANS_WRITE_SET_EXTRACTION_NOT_SET` was added in 8.0.11.

- Error: `11598` SQLSTATE: `HY000` (`ER_GRP_RPL_UNSUPPORTED_TRANS_ISOLATION`)

  Message: Transaction isolation level (tx_isolation) is set to SERIALIZABLE, which is not compatible with Group Replication

  `ER_GRP_RPL_UNSUPPORTED_TRANS_ISOLATION` was added in 8.0.11.

- Error: `11599` SQLSTATE: `HY000` (`ER_GRP_RPL_CANNOT_EXECUTE_TRANS_WHILE_STOPPING`)

  Message: Transaction cannot be executed while Group Replication is stopping.

  `ER_GRP_RPL_CANNOT_EXECUTE_TRANS_WHILE_STOPPING` was added in 8.0.11.

- Error: `11600` SQLSTATE: `HY000` (`ER_GRP_RPL_CANNOT_EXECUTE_TRANS_WHILE_RECOVERING`)

  Message: Transaction cannot be executed while Group Replication is recovering. Try again when the server is ONLINE.

  `ER_GRP_RPL_CANNOT_EXECUTE_TRANS_WHILE_RECOVERING` was added in 8.0.11.

- Error: `11601` SQLSTATE: `HY000` (`ER_GRP_RPL_CANNOT_EXECUTE_TRANS_IN_ERROR_STATE`)

  Message: Transaction cannot be executed while Group Replication is on ERROR state. Check for errors and restart the plugin

  `ER_GRP_RPL_CANNOT_EXECUTE_TRANS_IN_ERROR_STATE` was added in 8.0.11.

- Error: `11602` SQLSTATE: `HY000` (`ER_GRP_RPL_CANNOT_EXECUTE_TRANS_IN_OFFLINE_MODE`)

  Message: Transaction cannot be executed while Group Replication is OFFLINE. Check for errors and restart the plugin

  `ER_GRP_RPL_CANNOT_EXECUTE_TRANS_IN_OFFLINE_MODE` was added in 8.0.11.

- Error: `11603` SQLSTATE: `HY000` (`ER_GRP_RPL_MULTIPLE_CACHE_TYPE_NOT_SUPPORTED_FOR_SESSION`)

  Message: We can only use one cache type at a time on session %u

  `ER_GRP_RPL_MULTIPLE_CACHE_TYPE_NOT_SUPPORTED_FOR_SESSION` was added in 8.0.11.

- Error: `11604` SQLSTATE: `HY000` (`ER_GRP_RPL_FAILED_TO_REINIT_BINLOG_CACHE_FOR_READ`)

  Message: Failed to reinit binlog cache log for read on session %u

  `ER_GRP_RPL_FAILED_TO_REINIT_BINLOG_CACHE_FOR_READ` was added in 8.0.11.

- Error: `11605` SQLSTATE: `HY000` (`ER_GRP_RPL_FAILED_TO_CREATE_TRANS_CONTEXT`)

  Message: Failed to create the context of the current transaction on session %u

  `ER_GRP_RPL_FAILED_TO_CREATE_TRANS_CONTEXT` was added in 8.0.11.

- Error: `11606` SQLSTATE: `HY000` (`ER_GRP_RPL_FAILED_TO_EXTRACT_TRANS_WRITE_SET`)

Message: Failed to extract the set of items written during the execution of the current transaction on session %u

`ER_GRP_RPL_FAILED_TO_EXTRACT_TRANS_WRITE_SET` was added in 8.0.11.

- Error: `11607` SQLSTATE: `HY000` (`ER_GRP_RPL_FAILED_TO_GATHER_TRANS_WRITE_SET`)

  Message: Failed to gather the set of items written during the execution of the current transaction on session %u

  `ER_GRP_RPL_FAILED_TO_GATHER_TRANS_WRITE_SET` was added in 8.0.11.

- Error: `11608` SQLSTATE: `HY000` (`ER_GRP_RPL_TRANS_SIZE_EXCEEDS_LIMIT`)

  Message: Error on session %u. Transaction of size %llu exceeds specified limit %lu. To increase the limit please adjust group_replication_transaction_size_limit option.

  `ER_GRP_RPL_TRANS_SIZE_EXCEEDS_LIMIT` was added in 8.0.11.

- Error: `11609` SQLSTATE: `HY000` (`ER_GRP_RPL_REINIT_OF_INTERNAL_CACHE_FOR_READ_FAILED`)

  Message: Error while re-initializing an internal cache, for read operations, on session %u

  `ER_GRP_RPL_REINIT_OF_INTERNAL_CACHE_FOR_READ_FAILED` was added in 8.0.11, removed after 8.0.12.

- Error: `11610` SQLSTATE: `HY000` (`ER_GRP_RPL_APPENDING_DATA_TO_INTERNAL_CACHE_FAILED`)

  Message: Error while appending data to an internal cache on session %u

  `ER_GRP_RPL_APPENDING_DATA_TO_INTERNAL_CACHE_FAILED` was added in 8.0.11, removed after 8.0.12.

- Error: `11611` SQLSTATE: `HY000` (`ER_GRP_RPL_WRITE_TO_BINLOG_CACHE_FAILED`)

  Message: Error while writing binary log cache on session %u

  `ER_GRP_RPL_WRITE_TO_BINLOG_CACHE_FAILED` was added in 8.0.11, removed after 8.0.12.

- Error: `11611` SQLSTATE: `HY000` (`ER_GRP_RPL_WRITE_TO_TRANSACTION_MESSAGE_FAILED`)

  Message: Error while writing to transaction message on session %u

  `ER_GRP_RPL_WRITE_TO_TRANSACTION_MESSAGE_FAILED` was added in 8.0.13.

- Error: `11612` SQLSTATE: `HY000` (`ER_GRP_RPL_FAILED_TO_REGISTER_TRANS_OUTCOME_NOTIFICTION`)

  Message: Unable to register for getting notifications regarding the outcome of the transaction on session %u

  `ER_GRP_RPL_FAILED_TO_REGISTER_TRANS_OUTCOME_NOTIFICTION` was added in 8.0.11.

- Error: `11613` SQLSTATE: `HY000` (`ER_GRP_RPL_MSG_TOO_LONG_BROADCASTING_TRANS_FAILED`)

  Message: Error broadcasting transaction to the group on session %u. Message is too big.

  `ER_GRP_RPL_MSG_TOO_LONG_BROADCASTING_TRANS_FAILED` was added in 8.0.11.

- Error: `11614` SQLSTATE: `HY000` (`ER_GRP_RPL_BROADCASTING_TRANS_TO_GRP_FAILED`)

Message: Error while broadcasting the transaction to the group on session %u

ER_GRP_RPL_BROADCASTING_TRANS_TO_GRP_FAILED was added in 8.0.11.

- Error: 11615 SQLSTATE: HY000 (ER_GRP_RPL_ERROR_WHILE_WAITING_FOR_CONFLICT_DETECTION)

  Message: Error while waiting for conflict detection procedure to finish on session %u

  ER_GRP_RPL_ERROR_WHILE_WAITING_FOR_CONFLICT_DETECTION was added in 8.0.11.

- Error: 11616 SQLSTATE: HY000 (ER_GRP_RPL_REINIT_OF_INTERNAL_CACHE_FOR_WRITE_FAILED)

  Message: Error while re-initializing an internal cache, for write operations, on session %u

  ER_GRP_RPL_REINIT_OF_INTERNAL_CACHE_FOR_WRITE_FAILED was added in 8.0.11, removed after 8.0.12.

- Error: 11617 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_CREATE_COMMIT_CACHE)

  Message: Failed to create group replication commit cache on session %u

  ER_GRP_RPL_FAILED_TO_CREATE_COMMIT_CACHE was added in 8.0.11, removed after 8.0.12.

- Error: 11618 SQLSTATE: HY000 (ER_GRP_RPL_REINIT_OF_COMMIT_CACHE_FOR_WRITE_FAILED)

  Message: Failed to reinit group replication commit cache for write on session %u

  ER_GRP_RPL_REINIT_OF_COMMIT_CACHE_FOR_WRITE_FAILED was added in 8.0.11, removed after 8.0.12.

- Error: 11619 SQLSTATE: HY000 (ER_GRP_RPL_PREV_REC_SESSION_RUNNING)

  Message: A previous recovery session is still running. Please stop the group replication plugin and wait for it to stop

  ER_GRP_RPL_PREV_REC_SESSION_RUNNING was added in 8.0.11.

- Error: 11620 SQLSTATE: HY000 (ER_GRP_RPL_FATAL_REC_PROCESS)

  Message: Fatal error during the recovery process of Group Replication. The server will leave the group.

  ER_GRP_RPL_FATAL_REC_PROCESS was added in 8.0.11.

- Error: 11621 SQLSTATE: HY000 (ER_GRP_RPL_WHILE_STOPPING_REP_CHANNEL)

  Message: Error stopping all replication channels while server was leaving the group. %s

  ER_GRP_RPL_WHILE_STOPPING_REP_CHANNEL was added in 8.0.11.

- Error: 11622 SQLSTATE: HY000 (ER_GRP_RPL_UNABLE_TO_EVALUATE_APPLIER_STATUS)

  Message: Unable to evaluate the group replication applier execution status. Group replication recovery will shutdown to avoid data corruption.

  ER_GRP_RPL_UNABLE_TO_EVALUATE_APPLIER_STATUS was added in 8.0.11.

- Error: 11623 SQLSTATE: HY000 (ER_GRP_RPL_ONLY_ONE_SERVER_ALIVE)

  Message: Only one server alive. Declaring this server as online within the replication group

ER_GRP_RPL_ONLY_ONE_SERVER_ALIVE was added in 8.0.11.

- Error: 11624 SQLSTATE: HY000 (ER_GRP_RPL_CERTIFICATION_REC_PROCESS)

  Message: Error when processing certification information in the recovery process

  ER_GRP_RPL_CERTIFICATION_REC_PROCESS was added in 8.0.11.

- Error: 11625 SQLSTATE: HY000 (ER_GRP_RPL_UNABLE_TO_ENSURE_EXECUTION_REC)

  Message: Unable to ensure the execution of group transactions received during recovery.

  ER_GRP_RPL_UNABLE_TO_ENSURE_EXECUTION_REC was added in 8.0.11.

- Error: 11626 SQLSTATE: HY000 (ER_GRP_RPL_WHILE_SENDING_MSG_REC)

  Message: Error while sending message for group replication recovery

  ER_GRP_RPL_WHILE_SENDING_MSG_REC was added in 8.0.11.

- Error: 11627 SQLSTATE: HY000 (ER_GRP_RPL_READ_UNABLE_FOR_SUPER_READ_ONLY)

  Message: Unable to read the server value for the super_read_only variable.

  ER_GRP_RPL_READ_UNABLE_FOR_SUPER_READ_ONLY was added in 8.0.11.

- Error: 11628 SQLSTATE: HY000 (ER_GRP_RPL_READ_UNABLE_FOR_READ_ONLY_SUPER_READ_ONLY)

  Message: Unable to read the server values for the read_only and super_read_only variables.

  ER_GRP_RPL_READ_UNABLE_FOR_READ_ONLY_SUPER_READ_ONLY was added in 8.0.11.

- Error: 11629 SQLSTATE: HY000 (ER_GRP_RPL_UNABLE_TO_RESET_SERVER_READ_MODE)

  Message: Unable to reset the server read mode settings. Try to reset them manually.

  ER_GRP_RPL_UNABLE_TO_RESET_SERVER_READ_MODE was added in 8.0.11.

- Error: 11630 SQLSTATE: HY000 (ER_GRP_RPL_UNABLE_TO_CERTIFY_PLUGIN_TRANS)

  Message: Due to a plugin error, some transactions were unable to be certified and will now rollback.

  ER_GRP_RPL_UNABLE_TO_CERTIFY_PLUGIN_TRANS was added in 8.0.11.

- Error: 11631 SQLSTATE: HY000 (ER_GRP_RPL_UNBLOCK_CERTIFIED_TRANS)

  Message: Error when trying to unblock non certified transactions. Check for consistency errors when restarting the service

  ER_GRP_RPL_UNBLOCK_CERTIFIED_TRANS was added in 8.0.11.

- Error: 11632 SQLSTATE: HY000 (ER_GRP_RPL_SERVER_WORKING_AS_SECONDARY)

  Message: This server is working as secondary member with primary member address %s:%u.

  ER_GRP_RPL_SERVER_WORKING_AS_SECONDARY was added in 8.0.11.

- Error: 11633 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_START_WITH_INVALID_SERVER_ID)

  Message: Unable to start Group Replication. Replication applier infrastructure is not initialized since the server was started with server_id=0. Please, restart the server with server_id larger than 0.

ER_GRP_RPL_FAILED_TO_START_WITH_INVALID_SERVER_ID was added in 8.0.11.

- Error: 11634 SQLSTATE: HY000 (ER_GRP_RPL_FORCE_MEMBERS_MUST_BE_EMPTY)

  Message: group_replication_force_members must be empty on group start. Current value: '%s'

  ER_GRP_RPL_FORCE_MEMBERS_MUST_BE_EMPTY was added in 8.0.11.

- Error: 11635 SQLSTATE: HY000 (ER_GRP_RPL_PLUGIN_STRUCT_INIT_NOT_POSSIBLE_ON_SERVER_START)

  Message: It was not possible to guarantee the initialization of plugin structures on server start

  ER_GRP_RPL_PLUGIN_STRUCT_INIT_NOT_POSSIBLE_ON_SERVER_START was added in 8.0.11.

- Error: 11636 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_ENABLE_SUPER_READ_ONLY_MODE)

  Message: Could not enable the server read only mode and guarantee a safe recovery execution

  ER_GRP_RPL_FAILED_TO_ENABLE_SUPER_READ_ONLY_MODE was added in 8.0.11.

- Error: 11637 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_INIT_COMMUNICATION_ENGINE)

  Message: Error on group communication engine initialization

  ER_GRP_RPL_FAILED_TO_INIT_COMMUNICATION_ENGINE was added in 8.0.11.

- Error: 11638 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_START_ON_SECONDARY_WITH_ASYNC_CHANNELS)

  Message: Can't start group replication on secondary member with single-primary mode while asynchronous replication channels are running.

  ER_GRP_RPL_FAILED_TO_START_ON_SECONDARY_WITH_ASYNC_CHANNELS was added in 8.0.11.

- Error: 11639 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_START_COMMUNICATION_ENGINE)

  Message: Error on group communication engine start

  ER_GRP_RPL_FAILED_TO_START_COMMUNICATION_ENGINE was added in 8.0.11.

- Error: 11640 SQLSTATE: HY000 (ER_GRP_RPL_TIMEOUT_ON_VIEW_AFTER_JOINING_GRP)

  Message: Timeout on wait for view after joining group

  ER_GRP_RPL_TIMEOUT_ON_VIEW_AFTER_JOINING_GRP was added in 8.0.11.

- Error: 11641 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_CALL_GRP_COMMUNICATION_INTERFACE)

  Message: Error calling group communication interfaces

  ER_GRP_RPL_FAILED_TO_CALL_GRP_COMMUNICATION_INTERFACE was added in 8.0.11.

- Error: 11642 SQLSTATE: HY000 (ER_GRP_RPL_MEMBER_SERVER_UUID_IS_INCOMPATIBLE_WITH_GRP)

  Message: Member server_uuid is incompatible with the group. Server_uuid %s matches group_name %s.

  ER_GRP_RPL_MEMBER_SERVER_UUID_IS_INCOMPATIBLE_WITH_GRP was added in 8.0.11.

- Error: 11643 SQLSTATE: HY000 (ER_GRP_RPL_MEMBER_CONF_INFO)

  Message: Member configuration: member_id: %lu; member_uuid: "%s"; single-primary mode: "%s"; group_replication_auto_increment_increment: %lu;

  ER_GRP_RPL_MEMBER_CONF_INFO was added in 8.0.11.

- Error: 11644 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_CONFIRM_IF_SERVER_LEFT_GRP)

  Message: Unable to confirm whether the server has left the group or not. Check performance_schema.replication_group_members to check group membership information.

  ER_GRP_RPL_FAILED_TO_CONFIRM_IF_SERVER_LEFT_GRP was added in 8.0.11.

- Error: 11645 SQLSTATE: HY000 (ER_GRP_RPL_SERVER_IS_ALREADY_LEAVING)

  Message: Skipping leave operation: concurrent attempt to leave the group is on-going.

  ER_GRP_RPL_SERVER_IS_ALREADY_LEAVING was added in 8.0.11.

- Error: 11646 SQLSTATE: HY000 (ER_GRP_RPL_SERVER_ALREADY_LEFT)

  Message: Skipping leave operation: member already left the group.

  ER_GRP_RPL_SERVER_ALREADY_LEFT was added in 8.0.11.

- Error: 11647 SQLSTATE: HY000 (ER_GRP_RPL_WAITING_FOR_VIEW_UPDATE)

  Message: Going to wait for view modification

  ER_GRP_RPL_WAITING_FOR_VIEW_UPDATE was added in 8.0.11.

- Error: 11648 SQLSTATE: HY000 (ER_GRP_RPL_TIMEOUT_RECEIVING_VIEW_CHANGE_ON_SHUTDOWN)

  Message: On shutdown there was a timeout receiving a view change. This can lead to a possible inconsistent state. Check the log for more details

  ER_GRP_RPL_TIMEOUT_RECEIVING_VIEW_CHANGE_ON_SHUTDOWN was added in 8.0.11.

- Error: 11649 SQLSTATE: HY000 (ER_GRP_RPL_REQUESTING_NON_MEMBER_SERVER_TO_LEAVE)

  Message: Requesting to leave the group despite of not being a member

  ER_GRP_RPL_REQUESTING_NON_MEMBER_SERVER_TO_LEAVE was added in 8.0.11.

- Error: 11650 SQLSTATE: HY000 (ER_GRP_RPL_IS_STOPPING)

  Message: Plugin 'group_replication' is stopping.

  ER_GRP_RPL_IS_STOPPING was added in 8.0.11.

- Error: 11651 SQLSTATE: HY000 (ER_GRP_RPL_IS_STOPPED)

  Message: Plugin 'group_replication' has been stopped.

  ER_GRP_RPL_IS_STOPPED was added in 8.0.11.

- Error: 11652 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_ENABLE_READ_ONLY_MODE_ON_SHUTDOWN)

  Message: On plugin shutdown it was not possible to enable the server read only mode. Local transactions will be accepted and committed.

ER_GRP_RPL_FAILED_TO_ENABLE_READ_ONLY_MODE_ON_SHUTDOWN was added in 8.0.11.

- Error: 11653 SQLSTATE: HY000 (ER_GRP_RPL_RECOVERY_MODULE_TERMINATION_TIMED_OUT_ON_SHUTDOWN)

  Message: On shutdown there was a timeout on the Group Replication recovery module termination. Check the log for more details

  ER_GRP_RPL_RECOVERY_MODULE_TERMINATION_TIMED_OUT_ON_SHUTDOWN was added in 8.0.11.

- Error: 11654 SQLSTATE: HY000 (ER_GRP_RPL_APPLIER_TERMINATION_TIMED_OUT_ON_SHUTDOWN)

  Message: On shutdown there was a timeout on the Group Replication applier termination.

  ER_GRP_RPL_APPLIER_TERMINATION_TIMED_OUT_ON_SHUTDOWN was added in 8.0.11.

- Error: 11655 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_SHUTDOWN_REGISTRY_MODULE)

  Message: Unexpected failure while shutting down registry module!

  ER_GRP_RPL_FAILED_TO_SHUTDOWN_REGISTRY_MODULE was added in 8.0.11.

- Error: 11656 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_INIT_HANDLER)

  Message: Failure during Group Replication handler initialization

  ER_GRP_RPL_FAILED_TO_INIT_HANDLER was added in 8.0.11.

- Error: 11657 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_REGISTER_SERVER_STATE_OBSERVER)

  Message: Failure when registering the server state observers

  ER_GRP_RPL_FAILED_TO_REGISTER_SERVER_STATE_OBSERVER was added in 8.0.11.

- Error: 11658 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_REGISTER_TRANS_STATE_OBSERVER)

  Message: Failure when registering the transactions state observers

  ER_GRP_RPL_FAILED_TO_REGISTER_TRANS_STATE_OBSERVER was added in 8.0.11.

- Error: 11659 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_REGISTER_BINLOG_STATE_OBSERVER)

  Message: Failure when registering the binlog state observers

  ER_GRP_RPL_FAILED_TO_REGISTER_BINLOG_STATE_OBSERVER was added in 8.0.11.

- Error: 11660 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_START_ON_BOOT)

  Message: Unable to start Group Replication on boot

  ER_GRP_RPL_FAILED_TO_START_ON_BOOT was added in 8.0.11.

- Error: 11661 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_STOP_ON_PLUGIN_UNINSTALL)

  Message: Failure when stopping Group Replication on plugin uninstall

  ER_GRP_RPL_FAILED_TO_STOP_ON_PLUGIN_UNINSTALL was added in 8.0.11.

- Error: 11662 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_UNREGISTER_SERVER_STATE_OBSERVER)

  Message: Failure when unregistering the server state observers

  ER_GRP_RPL_FAILED_TO_UNREGISTER_SERVER_STATE_OBSERVER was added in 8.0.11.

- Error: 11663 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_UNREGISTER_TRANS_STATE_OBSERVER)

  Message: Failure when unregistering the transactions state observers

  ER_GRP_RPL_FAILED_TO_UNREGISTER_TRANS_STATE_OBSERVER was added in 8.0.11.

- Error: 11664 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_UNREGISTER_BINLOG_STATE_OBSERVER)

  Message: Failure when unregistering the binlog state observers

  ER_GRP_RPL_FAILED_TO_UNREGISTER_BINLOG_STATE_OBSERVER was added in 8.0.11.

- Error: 11665 SQLSTATE: HY000 (ER_GRP_RPL_ALL_OBSERVERS_UNREGISTERED)

  Message: All Group Replication server observers have been successfully unregistered

  ER_GRP_RPL_ALL_OBSERVERS_UNREGISTERED was added in 8.0.11.

- Error: 11666 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_PARSE_THE_GRP_NAME)

  Message: Unable to parse the group name.

  ER_GRP_RPL_FAILED_TO_PARSE_THE_GRP_NAME was added in 8.0.11.

- Error: 11667 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_GENERATE_SIDNO_FOR_GRP)

  Message: Unable to parse the group name.

  ER_GRP_RPL_FAILED_TO_GENERATE_SIDNO_FOR_GRP was added in 8.0.11.

- Error: 11668 SQLSTATE: HY000 (ER_GRP_RPL_APPLIER_NOT_STARTED_DUE_TO_RUNNING_PREV_SHUTDOWN)

  Message: Cannot start the Group Replication applier as a previous shutdown is still running: The thread will stop once its task is complete.

  ER_GRP_RPL_APPLIER_NOT_STARTED_DUE_TO_RUNNING_PREV_SHUTDOWN was added in 8.0.11.

- Error: 11669 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_INIT_APPLIER_MODULE)

  Message: Unable to initialize the Group Replication applier module.

  ER_GRP_RPL_FAILED_TO_INIT_APPLIER_MODULE was added in 8.0.11.

- Error: 11670 SQLSTATE: HY000 (ER_GRP_RPL_APPLIER_INITIALIZED)

  Message: Group Replication applier module successfully initialized!

  ER_GRP_RPL_APPLIER_INITIALIZED was added in 8.0.11.

- Error: 11671 SQLSTATE: HY000 (ER_GRP_RPL_COMMUNICATION_SSL_CONF_INFO)

  Message: Group communication SSL configuration: group_replication_ssl_mode: "%s"; server_key_file: "%s"; server_cert_file: "%s"; client_key_file: "%s"; client_cert_file: "%s"; ca_file:

"%s"; ca_path: "%s"; cipher: "%s"; tls_version: "%s"; crl_file: "%s"; crl_path: "%s"; ssl_fips_mode: "%s"

ER_GRP_RPL_COMMUNICATION_SSL_CONF_INFO was added in 8.0.11.

- Error: 11672 SQLSTATE: HY000 (ER_GRP_RPL_ABORTS_AS_SSL_NOT_SUPPORTED_BY_MYSQLD)

  Message: MySQL server does not have SSL support and group_replication_ssl_mode is "%s", START GROUP_REPLICATION will abort

  ER_GRP_RPL_ABORTS_AS_SSL_NOT_SUPPORTED_BY_MYSQLD was added in 8.0.11.

- Error: 11673 SQLSTATE: HY000 (ER_GRP_RPL_SSL_DISABLED)

  Message: Group communication SSL configuration: group_replication_ssl_mode: "%s"

  ER_GRP_RPL_SSL_DISABLED was added in 8.0.11.

- Error: 11674 SQLSTATE: HY000 (ER_GRP_RPL_UNABLE_TO_INIT_COMMUNICATION_ENGINE)

  Message: Unable to initialize the group communication engine

  ER_GRP_RPL_UNABLE_TO_INIT_COMMUNICATION_ENGINE was added in 8.0.11.

- Error: 11675 SQLSTATE: HY000 (ER_GRP_RPL_BINLOG_DISABLED)

  Message: Binlog must be enabled for Group Replication

  ER_GRP_RPL_BINLOG_DISABLED was added in 8.0.11.

- Error: 11676 SQLSTATE: HY000 (ER_GRP_RPL_GTID_MODE_OFF)

  Message: Gtid mode should be ON for Group Replication

  ER_GRP_RPL_GTID_MODE_OFF was added in 8.0.11.

- Error: 11677 SQLSTATE: HY000 (ER_GRP_RPL_LOG_SLAVE_UPDATES_NOT_SET)

  Message: LOG_SLAVE_UPDATES should be ON for Group Replication

  ER_GRP_RPL_LOG_SLAVE_UPDATES_NOT_SET was added in 8.0.11.

- Error: 11678 SQLSTATE: HY000 (ER_GRP_RPL_INVALID_TRANS_WRITE_SET_EXTRACTION_VALUE)

  Message: Extraction of transaction write sets requires an hash algorithm configuration. Please, double check that the parameter transaction-write-set-extraction is set to a valid algorithm.

  ER_GRP_RPL_INVALID_TRANS_WRITE_SET_EXTRACTION_VALUE was added in 8.0.11.

- Error: 11679 SQLSTATE: HY000 (ER_GRP_RPL_RELAY_LOG_INFO_REPO_MUST_BE_TABLE)

  Message: Relay log info repository must be set to TABLE

  ER_GRP_RPL_RELAY_LOG_INFO_REPO_MUST_BE_TABLE was added in 8.0.11.

- Error: 11680 SQLSTATE: HY000 (ER_GRP_RPL_MASTER_INFO_REPO_MUST_BE_TABLE)

  Message: Master info repository must be set to TABLE.

  ER_GRP_RPL_MASTER_INFO_REPO_MUST_BE_TABLE was added in 8.0.11.

- Error: 11681 SQLSTATE: HY000 (ER_GRP_RPL_INCORRECT_TYPE_SET_FOR_PARALLEL_APPLIER)

  Message: In order to use parallel applier on Group Replication, parameter slave-parallel-type must be set to 'LOGICAL_CLOCK'.

  ER_GRP_RPL_INCORRECT_TYPE_SET_FOR_PARALLEL_APPLIER was added in 8.0.11.

- Error: 11682 SQLSTATE: HY000 (ER_GRP_RPL_SLAVE_PRESERVE_COMMIT_ORDER_NOT_SET)

  Message: Group Replication requires slave-preserve-commit-order to be set to ON when using more than 1 applier threads.

  ER_GRP_RPL_SLAVE_PRESERVE_COMMIT_ORDER_NOT_SET was added in 8.0.11.

- Error: 11683 SQLSTATE: HY000 (ER_GRP_RPL_SINGLE_PRIM_MODE_NOT_ALLOWED_WITH_UPDATE_EVERYWHERE)

  Message: It is not allowed to run single primary mode with 'enforce_update_everywhere_checks' enabled.

  ER_GRP_RPL_SINGLE_PRIM_MODE_NOT_ALLOWED_WITH_UPDATE_EVERYWHERE was added in 8.0.11.

- Error: 11684 SQLSTATE: HY000 (ER_GRP_RPL_MODULE_TERMINATE_ERROR)

  Message: error_message: %s

  ER_GRP_RPL_MODULE_TERMINATE_ERROR was added in 8.0.11.

- Error: 11685 SQLSTATE: HY000 (ER_GRP_RPL_GRP_NAME_OPTION_MANDATORY)

  Message: The group name option is mandatory

  ER_GRP_RPL_GRP_NAME_OPTION_MANDATORY was added in 8.0.11.

- Error: 11686 SQLSTATE: HY000 (ER_GRP_RPL_GRP_NAME_IS_TOO_LONG)

  Message: The group name '%s' is not a valid UUID, its length is too big

  ER_GRP_RPL_GRP_NAME_IS_TOO_LONG was added in 8.0.11.

- Error: 11687 SQLSTATE: HY000 (ER_GRP_RPL_GRP_NAME_IS_NOT_VALID_UUID)

  Message: The group name '%s' is not a valid UUID

  ER_GRP_RPL_GRP_NAME_IS_NOT_VALID_UUID was added in 8.0.11.

- Error: 11688 SQLSTATE: HY000 (ER_GRP_RPL_FLOW_CTRL_MIN_QUOTA_GREATER_THAN_MAX_QUOTA)

  Message: group_replication_flow_control_min_quota cannot be larger than group_replication_flow_control_max_quota

  ER_GRP_RPL_FLOW_CTRL_MIN_QUOTA_GREATER_THAN_MAX_QUOTA was added in 8.0.11.

- Error: 11689 SQLSTATE: HY000 (ER_GRP_RPL_FLOW_CTRL_MIN_RECOVERY_QUOTA_GREATER_THAN_MAX_QUOTA)

  Message: group_replication_flow_control_min_recovery_quota cannot be larger than group_replication_flow_control_max_quota

ER_GRP_RPL_FLOW_CTRL_MIN_RECOVERY_QUOTA_GREATER_THAN_MAX_QUOTA was added in 8.0.11.

- Error: 11690 SQLSTATE: HY000 (ER_GRP_RPL_FLOW_CTRL_MAX_QUOTA_SMALLER_THAN_MIN_QUOTAS)

  Message: group_replication_flow_control_max_quota cannot be smaller than group_replication_flow_control_min_quota or group_replication_flow_control_min_recovery_quota

  ER_GRP_RPL_FLOW_CTRL_MAX_QUOTA_SMALLER_THAN_MIN_QUOTAS was added in 8.0.11.

- Error: 11691 SQLSTATE: HY000 (ER_GRP_RPL_INVALID_SSL_RECOVERY_STRING)

  Message: The given value for recovery ssl option '%s' is invalid as its length is beyond the limit

  ER_GRP_RPL_INVALID_SSL_RECOVERY_STRING was added in 8.0.11.

- Error: 11692 SQLSTATE: HY000 (ER_GRP_RPL_SUPPORTS_ONLY_ONE_FORCE_MEMBERS_SET)

  Message: There is one group_replication_force_members operation already ongoing

  ER_GRP_RPL_SUPPORTS_ONLY_ONE_FORCE_MEMBERS_SET was added in 8.0.11.

- Error: 11693 SQLSTATE: HY000 (ER_GRP_RPL_FORCE_MEMBERS_SET_UPDATE_NOT_ALLOWED)

  Message: group_replication_force_members can only be updated when Group Replication is running and a majority of the members are unreachable

  ER_GRP_RPL_FORCE_MEMBERS_SET_UPDATE_NOT_ALLOWED was added in 8.0.11.

- Error: 11694 SQLSTATE: HY000 (ER_GRP_RPL_GRP_COMMUNICATION_INIT_WITH_CONF)

  Message: Initialized group communication with configuration: group_replication_group_name: '%s'; group_replication_local_address: '%s'; group_replication_group_seeds: '%s'; group_replication_bootstrap_group: '%s'; group_replication_poll_spin_loops: %lu; group_replication_compression_threshold: %lu; group_replication_ip_whitelist: '%s'; group_replication_communication_debug_options: '%s'

  ER_GRP_RPL_GRP_COMMUNICATION_INIT_WITH_CONF was added in 8.0.11.

- Error: 11695 SQLSTATE: HY000 (ER_GRP_RPL_UNKNOWN_GRP_RPL_APPLIER_PIPELINE_REQUESTED)

  Message: Unknown group replication applier pipeline requested

  ER_GRP_RPL_UNKNOWN_GRP_RPL_APPLIER_PIPELINE_REQUESTED was added in 8.0.11.

- Error: 11696 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_BOOTSTRAP_EVENT_HANDLING_INFRASTRUCTURE)

  Message: Unable to bootstrap group replication event handling infrastructure. Unknown handler type: %d

  ER_GRP_RPL_FAILED_TO_BOOTSTRAP_EVENT_HANDLING_INFRASTRUCTURE was added in 8.0.11.

- Error: 11697 SQLSTATE: HY000 (ER_GRP_RPL_APPLIER_HANDLER_NOT_INITIALIZED)

  Message: One of the group replication applier handlers is null due to an initialization error

  ER_GRP_RPL_APPLIER_HANDLER_NOT_INITIALIZED was added in 8.0.11.

- Error: 11698 SQLSTATE: HY000 (ER_GRP_RPL_APPLIER_HANDLER_IS_IN_USE)

  Message: A group replication applier handler, marked as unique, is already in use.

  ER_GRP_RPL_APPLIER_HANDLER_IS_IN_USE was added in 8.0.11.

- Error: 11699 SQLSTATE: HY000 (ER_GRP_RPL_APPLIER_HANDLER_ROLE_IS_IN_USE)

  Message: A group replication applier handler role, that was marked as unique, is already in use.

  ER_GRP_RPL_APPLIER_HANDLER_ROLE_IS_IN_USE was added in 8.0.11.

- Error: 11700 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_INIT_APPLIER_HANDLER)

  Message: Error on group replication applier handler initialization

  ER_GRP_RPL_FAILED_TO_INIT_APPLIER_HANDLER was added in 8.0.11.

- Error: 11701 SQLSTATE: HY000 (ER_GRP_RPL_SQL_SERVICE_FAILED_TO_INIT_SESSION_THREAD)

  Message: Error when initializing a session thread for internal server connection.

  ER_GRP_RPL_SQL_SERVICE_FAILED_TO_INIT_SESSION_THREAD was added in 8.0.11.

- Error: 11702 SQLSTATE: HY000 (ER_GRP_RPL_SQL_SERVICE_COMM_SESSION_NOT_INITIALIZED)

  Message: Error running internal SQL query: %s. The internal server communication session is not initialized

  ER_GRP_RPL_SQL_SERVICE_COMM_SESSION_NOT_INITIALIZED was added in 8.0.11.

- Error: 11703 SQLSTATE: HY000 (ER_GRP_RPL_SQL_SERVICE_SERVER_SESSION_KILLED)

  Message: Error running internal SQL query: %s. The internal server session was killed or server is shutting down.

  ER_GRP_RPL_SQL_SERVICE_SERVER_SESSION_KILLED was added in 8.0.11.

- Error: 11704 SQLSTATE: HY000 (ER_GRP_RPL_SQL_SERVICE_FAILED_TO_RUN_SQL_QUERY)

  Message: Error running internal SQL query: %s. Got internal SQL error: %s(%d)

  ER_GRP_RPL_SQL_SERVICE_FAILED_TO_RUN_SQL_QUERY was added in 8.0.11.

- Error: 11705 SQLSTATE: HY000 (ER_GRP_RPL_SQL_SERVICE_SERVER_INTERNAL_FAILURE)

  Message: Error running internal SQL query: %s. Internal failure.

  ER_GRP_RPL_SQL_SERVICE_SERVER_INTERNAL_FAILURE was added in 8.0.11.

- Error: 11706 SQLSTATE: HY000 (ER_GRP_RPL_SQL_SERVICE_RETRIES_EXCEEDED_ON_SESSION_STATE)

  Message: Error, maximum number of retries exceeded when waiting for the internal server session state to be operating

  ER_GRP_RPL_SQL_SERVICE_RETRIES_EXCEEDED_ON_SESSION_STATE was added in 8.0.11.

- Error: 11707 SQLSTATE: HY000 (ER_GRP_RPL_SQL_SERVICE_FAILED_TO_FETCH_SECURITY_CTX)

Message: Error when trying to fetch security context when contacting the server for internal plugin requests.

`ER_GRP_RPL_SQL_SERVICE_FAILED_TO_FETCH_SECURITY_CTX` was added in 8.0.11.

- Error: `11708` SQLSTATE: `HY000` (`ER_GRP_RPL_SQL_SERVICE_SERVER_ACCESS_DENIED_FOR_USER`)

  Message: There was an error when trying to access the server with user: %s. Make sure the user is present in the server and that mysql_upgrade was run after a server update.

  `ER_GRP_RPL_SQL_SERVICE_SERVER_ACCESS_DENIED_FOR_USER` was added in 8.0.11.

- Error: `11709` SQLSTATE: `HY000` (`ER_GRP_RPL_SQL_SERVICE_MAX_CONN_ERROR_FROM_SERVER`)

  Message: Failed to establish an internal server connection to execute plugin operations since the server does not have available connections, please increase @@GLOBAL.MAX_CONNECTIONS. Server error: %i.

  `ER_GRP_RPL_SQL_SERVICE_MAX_CONN_ERROR_FROM_SERVER` was added in 8.0.11.

- Error: `11710` SQLSTATE: `HY000` (`ER_GRP_RPL_SQL_SERVICE_SERVER_ERROR_ON_CONN`)

  Message: Failed to establish an internal server connection to execute plugin operations. Server error: %i. Server error message: %s

  `ER_GRP_RPL_SQL_SERVICE_SERVER_ERROR_ON_CONN` was added in 8.0.11.

- Error: `11711` SQLSTATE: `HY000` (`ER_GRP_RPL_UNREACHABLE_MAJORITY_TIMEOUT_FOR_MEMBER`)

  Message: This member could not reach a majority of the members for more than %ld seconds. The member will now leave the group as instructed by the group_replication_unreachable_majority_timeout option.

  `ER_GRP_RPL_UNREACHABLE_MAJORITY_TIMEOUT_FOR_MEMBER` was added in 8.0.11.

- Error: `11712` SQLSTATE: `HY000` (`ER_GRP_RPL_SERVER_SET_TO_READ_ONLY_DUE_TO_ERRORS`)

  Message: The server was automatically set into read only mode after an error was detected.

  `ER_GRP_RPL_SERVER_SET_TO_READ_ONLY_DUE_TO_ERRORS` was added in 8.0.11.

- Error: `11713` SQLSTATE: `HY000` (`ER_GRP_RPL_GMS_LISTENER_FAILED_TO_LOG_NOTIFICATION`)

  Message: Unable to log notification to table (errno: %lu) (res: %d)! Message: %s

  `ER_GRP_RPL_GMS_LISTENER_FAILED_TO_LOG_NOTIFICATION` was added in 8.0.11.

- Error: `11714` SQLSTATE: `HY000` (`ER_GRP_RPL_GRP_COMMUNICATION_ENG_INIT_FAILED`)

  Message: Failure in group communication engine '%s' initialization

  `ER_GRP_RPL_GRP_COMMUNICATION_ENG_INIT_FAILED` was added in 8.0.11.

- Error: `11715` SQLSTATE: `HY000` (`ER_GRP_RPL_SET_GRP_COMMUNICATION_ENG_LOGGER_FAILED`)

  Message: Unable to set the group communication engine logger

ER_GRP_RPL_SET_GRP_COMMUNICATION_ENG_LOGGER_FAILED was added in 8.0.11.

- Error: 11716 SQLSTATE: HY000 (ER_GRP_RPL_DEBUG_OPTIONS)

  Message: Current debug options are: '%s'.

  ER_GRP_RPL_DEBUG_OPTIONS was added in 8.0.11.

- Error: 11717 SQLSTATE: HY000 (ER_GRP_RPL_INVALID_DEBUG_OPTIONS)

  Message: Some debug options in '%s' are not valid.

  ER_GRP_RPL_INVALID_DEBUG_OPTIONS was added in 8.0.11.

- Error: 11718 SQLSTATE: HY000 (ER_GRP_RPL_EXIT_GRP_GCS_ERROR)

  Message: Error calling group communication interfaces while trying to leave the group

  ER_GRP_RPL_EXIT_GRP_GCS_ERROR was added in 8.0.11.

- Error: 11719 SQLSTATE: HY000 (ER_GRP_RPL_GRP_MEMBER_OFFLINE)

  Message: Member is OFFLINE, it is not possible to force a new group membership

  ER_GRP_RPL_GRP_MEMBER_OFFLINE was added in 8.0.11.

- Error: 11720 SQLSTATE: HY000 (ER_GRP_RPL_GCS_INTERFACE_ERROR)

  Message: Error calling group communication interfaces

  ER_GRP_RPL_GCS_INTERFACE_ERROR was added in 8.0.11.

- Error: 11721 SQLSTATE: HY000 (ER_GRP_RPL_FORCE_MEMBER_VALUE_SET_ERROR)

  Message: Error setting group_replication_force_members value '%s' on group communication interfaces

  ER_GRP_RPL_FORCE_MEMBER_VALUE_SET_ERROR was added in 8.0.11.

- Error: 11722 SQLSTATE: HY000 (ER_GRP_RPL_FORCE_MEMBER_VALUE_SET)

  Message: The group_replication_force_members value '%s' was set in the group communication interfaces

  ER_GRP_RPL_FORCE_MEMBER_VALUE_SET was added in 8.0.11.

- Error: 11723 SQLSTATE: HY000 (ER_GRP_RPL_FORCE_MEMBER_VALUE_TIME_OUT)

  Message: Timeout on wait for view after setting group_replication_force_members value '%s' into group communication interfaces

  ER_GRP_RPL_FORCE_MEMBER_VALUE_TIME_OUT was added in 8.0.11.

- Error: 11724 SQLSTATE: HY000 (ER_GRP_RPL_BROADCAST_COMMIT_MSSG_TOO_BIG)

  Message: Broadcast of committed transactions message failed. Message is too big.

  ER_GRP_RPL_BROADCAST_COMMIT_MSSG_TOO_BIG was added in 8.0.11.

- Error: 11725 SQLSTATE: HY000 (ER_GRP_RPL_SEND_STATS_ERROR)

  Message: Error while sending stats message

ER_GRP_RPL_SEND_STATS_ERROR was added in 8.0.11.

- Error: 11726 SQLSTATE: HY000 (ER_GRP_RPL_MEMBER_STATS_INFO)

  Message: Flow control - update member stats: %s stats certifier_queue %d, applier_queue %d certified %ld (%ld), applied %ld (%ld), local %ld (%ld), quota %ld (%ld) mode=%d

  ER_GRP_RPL_MEMBER_STATS_INFO was added in 8.0.11.

- Error: 11727 SQLSTATE: HY000 (ER_GRP_RPL_FLOW_CONTROL_STATS)

  Message: Flow control: throttling to %ld commits per %ld sec, with %d writing and %d non-recovering members, min capacity %lld, lim throttle %lld

  ER_GRP_RPL_FLOW_CONTROL_STATS was added in 8.0.11.

- Error: 11728 SQLSTATE: HY000 (ER_GRP_RPL_UNABLE_TO_CONVERT_PACKET_TO_EVENT)

  Message: Unable to convert a packet into an event on the applier. Error: %s

  ER_GRP_RPL_UNABLE_TO_CONVERT_PACKET_TO_EVENT was added in 8.0.11.

- Error: 11729 SQLSTATE: HY000 (ER_GRP_RPL_PIPELINE_CREATE_FAILED)

  Message: Failed to create group replication pipeline cache.

  ER_GRP_RPL_PIPELINE_CREATE_FAILED was added in 8.0.11.

- Error: 11730 SQLSTATE: HY000 (ER_GRP_RPL_PIPELINE_REINIT_FAILED_WRITE)

  Message: Failed to reinit group replication pipeline cache for write.

  ER_GRP_RPL_PIPELINE_REINIT_FAILED_WRITE was added in 8.0.11.

- Error: 11731 SQLSTATE: HY000 (ER_GRP_RPL_UNABLE_TO_CONVERT_EVENT_TO_PACKET)

  Message: Unable to convert the event into a packet on the applier. Error: %s

  ER_GRP_RPL_UNABLE_TO_CONVERT_EVENT_TO_PACKET was added in 8.0.11.

- Error: 11732 SQLSTATE: HY000 (ER_GRP_RPL_PIPELINE_FLUSH_FAIL)

  Message: Failed to flush group replication pipeline cache.

  ER_GRP_RPL_PIPELINE_FLUSH_FAIL was added in 8.0.11.

- Error: 11733 SQLSTATE: HY000 (ER_GRP_RPL_PIPELINE_REINIT_FAILED_READ)

  Message: Failed to reinit group replication pipeline cache for read.

  ER_GRP_RPL_PIPELINE_REINIT_FAILED_READ was added in 8.0.11.

- Error: 11734 SQLSTATE: HY000 (ER_GRP_RPL_STOP_REP_CHANNEL)

  Message: Error stopping all replication channels while server was leaving the group. Got error: %d. Please check the error log for more details.

  ER_GRP_RPL_STOP_REP_CHANNEL was added in 8.0.11.

- Error: 11735 SQLSTATE: HY000 (ER_GRP_RPL_GCS_GR_ERROR_MSG)

  Message: %s

ER_GRP_RPL_GCS_GR_ERROR_MSG was added in 8.0.11.

- Error: 11736 SQLSTATE: HY000 (ER_GRP_RPL_SLAVE_IO_THREAD_UNBLOCKED)

  Message: The slave IO thread of channel '%s' is unblocked as the member is declared ONLINE now.

  ER_GRP_RPL_SLAVE_IO_THREAD_UNBLOCKED was added in 8.0.11.

- Error: 11737 SQLSTATE: HY000 (ER_GRP_RPL_SLAVE_IO_THREAD_ERROR_OUT)

  Message: The slave IO thread of channel '%s' will error out as the member failed to come ONLINE.

  ER_GRP_RPL_SLAVE_IO_THREAD_ERROR_OUT was added in 8.0.11.

- Error: 11738 SQLSTATE: HY000 (ER_GRP_RPL_SLAVE_APPLIER_THREAD_UNBLOCKED)

  Message: The slave applier thread of channel '%s' is unblocked as the member is declared ONLINE now.

  ER_GRP_RPL_SLAVE_APPLIER_THREAD_UNBLOCKED was added in 8.0.11.

- Error: 11739 SQLSTATE: HY000 (ER_GRP_RPL_SLAVE_APPLIER_THREAD_ERROR_OUT)

  Message: The slave applier thread of channel '%s' will error out as the member failed to come ONLINE.

  ER_GRP_RPL_SLAVE_APPLIER_THREAD_ERROR_OUT was added in 8.0.11.

- Error: 11740 SQLSTATE: HY000 (ER_LDAP_AUTH_FAILED_TO_CREATE_OR_GET_CONNECTION)

  Message: LDAP authentication initialize: failed to create/ get connection from the pool.

  ER_LDAP_AUTH_FAILED_TO_CREATE_OR_GET_CONNECTION was added in 8.0.11.

- Error: 11741 SQLSTATE: HY000 (ER_LDAP_AUTH_DEINIT_FAILED)

  Message: LDAP authentication de_initialize Failed

  ER_LDAP_AUTH_DEINIT_FAILED was added in 8.0.11.

- Error: 11742 SQLSTATE: HY000 (ER_LDAP_AUTH_SKIPPING_USER_GROUP_SEARCH)

  Message: Skipping group search, No group attribute mentioned

  ER_LDAP_AUTH_SKIPPING_USER_GROUP_SEARCH was added in 8.0.11.

- Error: 11743 SQLSTATE: HY000 (ER_LDAP_AUTH_POOL_DISABLE_MAX_SIZE_ZERO)

  Message: Pool max size is 0, connection pool is disabled

  ER_LDAP_AUTH_POOL_DISABLE_MAX_SIZE_ZERO was added in 8.0.11.

- Error: 11744 SQLSTATE: HY000 (ER_LDAP_AUTH_FAILED_TO_CREATE_LDAP_OBJECT_CREATOR)

  Message: Connection pool initialization, failed to create LDAP object creator

  ER_LDAP_AUTH_FAILED_TO_CREATE_LDAP_OBJECT_CREATOR was added in 8.0.11.

- Error: 11745 SQLSTATE: HY000 (ER_LDAP_AUTH_FAILED_TO_CREATE_LDAP_OBJECT)

  Message: Connection pool initialization, failed to create LDAP object

ER_LDAP_AUTH_FAILED_TO_CREATE_LDAP_OBJECT was added in 8.0.11.

- Error: 11746 SQLSTATE: HY000 (ER_LDAP_AUTH_TLS_CONF)

  Message: LDAP TLS configuration

  ER_LDAP_AUTH_TLS_CONF was added in 8.0.11.

- Error: 11747 SQLSTATE: HY000 (ER_LDAP_AUTH_TLS_CONNECTION)

  Message: LDAP TLS connection

  ER_LDAP_AUTH_TLS_CONNECTION was added in 8.0.11.

- Error: 11748 SQLSTATE: HY000 (ER_LDAP_AUTH_CONN_POOL_NOT_CREATED)

  Message: LDAP pool is not created.

  ER_LDAP_AUTH_CONN_POOL_NOT_CREATED was added in 8.0.11.

- Error: 11749 SQLSTATE: HY000 (ER_LDAP_AUTH_CONN_POOL_INITIALIZING)

  Message: LDAP pool is initializing

  ER_LDAP_AUTH_CONN_POOL_INITIALIZING was added in 8.0.11.

- Error: 11750 SQLSTATE: HY000 (ER_LDAP_AUTH_CONN_POOL_DEINITIALIZING)

  Message: LDAP pool is de-initializing

  ER_LDAP_AUTH_CONN_POOL_DEINITIALIZING was added in 8.0.11.

- Error: 11751 SQLSTATE: HY000 (ER_LDAP_AUTH_ZERO_MAX_POOL_SIZE_UNCHANGED)

  Message: Pool max size old and new values are 0

  ER_LDAP_AUTH_ZERO_MAX_POOL_SIZE_UNCHANGED was added in 8.0.11.

- Error: 11752 SQLSTATE: HY000 (ER_LDAP_AUTH_POOL_REINITIALIZING)

  Message: LDAP pool is re-initializing

  ER_LDAP_AUTH_POOL_REINITIALIZING was added in 8.0.11.

- Error: 11753 SQLSTATE: HY000 (ER_LDAP_AUTH_FAILED_TO_WRITE_PACKET)

  Message: Plug-in has failed to write the packet.

  ER_LDAP_AUTH_FAILED_TO_WRITE_PACKET was added in 8.0.11.

- Error: 11754 SQLSTATE: HY000 (ER_LDAP_AUTH_SETTING_USERNAME)

  Message: Setting LDAP user name as : %s

  ER_LDAP_AUTH_SETTING_USERNAME was added in 8.0.11.

- Error: 11755 SQLSTATE: HY000 (ER_LDAP_AUTH_USER_AUTH_DATA)

  Message: User authentication data: %s size: %lu

  ER_LDAP_AUTH_USER_AUTH_DATA was added in 8.0.11.

- Error: 11756 SQLSTATE: HY000 (ER_LDAP_AUTH_INFO_FOR_USER)

Message: User is authenticated as: %s external user: %s

`ER_LDAP_AUTH_INFO_FOR_USER` was added in 8.0.11.

- Error: `11757` SQLSTATE: `HY000` (`ER_LDAP_AUTH_USER_GROUP_SEARCH_INFO`)

  Message: Group search information base DN: %s scope: %d filter: %s attribute: %s

  `ER_LDAP_AUTH_USER_GROUP_SEARCH_INFO` was added in 8.0.11.

- Error: `11758` SQLSTATE: `HY000` (`ER_LDAP_AUTH_GRP_SEARCH_SPECIAL_HDL`)

  Message: Special handling for group search, {GA} found

  `ER_LDAP_AUTH_GRP_SEARCH_SPECIAL_HDL` was added in 8.0.11.

- Error: `11759` SQLSTATE: `HY000` (`ER_LDAP_AUTH_GRP_IS_FULL_DN`)

  Message: Group search special handling, group full DN found.

  `ER_LDAP_AUTH_GRP_IS_FULL_DN` was added in 8.0.11.

- Error: `11760` SQLSTATE: `HY000` (`ER_LDAP_AUTH_USER_NOT_FOUND_IN_ANY_GRP`)

  Message: User %s is not member of any group.

  `ER_LDAP_AUTH_USER_NOT_FOUND_IN_ANY_GRP` was added in 8.0.11.

- Error: `11761` SQLSTATE: `HY000` (`ER_LDAP_AUTH_USER_FOUND_IN_MANY_GRPS`)

  Message: User %s is member of more than one group

  `ER_LDAP_AUTH_USER_FOUND_IN_MANY_GRPS` was added in 8.0.11.

- Error: `11762` SQLSTATE: `HY000` (`ER_LDAP_AUTH_USER_HAS_MULTIPLE_GRP_NAMES`)

  Message: For user %s has multiple user group names. Please check if group attribute name is correct

  `ER_LDAP_AUTH_USER_HAS_MULTIPLE_GRP_NAMES` was added in 8.0.11.

- Error: `11763` SQLSTATE: `HY000` (`ER_LDAP_AUTH_SEARCHED_USER_GRP_NAME`)

  Message: Searched group name: %s

  `ER_LDAP_AUTH_SEARCHED_USER_GRP_NAME` was added in 8.0.11.

- Error: `11764` SQLSTATE: `HY000` (`ER_LDAP_AUTH_OBJECT_CREATE_TIMESTAMP`)

  Message: LDAP authentication object creation time_stamp: %s dn: %s

  `ER_LDAP_AUTH_OBJECT_CREATE_TIMESTAMP` was added in 8.0.11.

- Error: `11765` SQLSTATE: `HY000` (`ER_LDAP_AUTH_CERTIFICATE_NAME`)

  Message: Certificate name: %s

  `ER_LDAP_AUTH_CERTIFICATE_NAME` was added in 8.0.11.

- Error: `11766` SQLSTATE: `HY000` (`ER_LDAP_AUTH_FAILED_TO_POOL_DEINIT`)

  Message: Failed to pool de-initialized: pool is already reconstructing

  `ER_LDAP_AUTH_FAILED_TO_POOL_DEINIT` was added in 8.0.11.

- Error: 11767 SQLSTATE: HY000 (ER_LDAP_AUTH_FAILED_TO_INITIALIZE_POOL_IN_RECONSTRUCTING)

  Message: Pool initialization failed: pool is already initialized

  ER_LDAP_AUTH_FAILED_TO_INITIALIZE_POOL_IN_RECONSTRUCTING was added in 8.0.11.

- Error: 11768 SQLSTATE: HY000 (ER_LDAP_AUTH_FAILED_TO_INITIALIZE_POOL_IN_INIT_STATE)

  Message: Pool initialization failed: pool is initializing

  ER_LDAP_AUTH_FAILED_TO_INITIALIZE_POOL_IN_INIT_STATE was added in 8.0.11.

- Error: 11769 SQLSTATE: HY000 (ER_LDAP_AUTH_FAILED_TO_INITIALIZE_POOL_IN_DEINIT_STATE)

  Message: Pool initialization failed: pool is de-initializing

  ER_LDAP_AUTH_FAILED_TO_INITIALIZE_POOL_IN_DEINIT_STATE was added in 8.0.11.

- Error: 11770 SQLSTATE: HY000 (ER_LDAP_AUTH_FAILED_TO_DEINITIALIZE_POOL_IN_RECONSTRUCT_STATE)

  Message: Failed to pool deinitialized: pool is already reconstructing

  ER_LDAP_AUTH_FAILED_TO_DEINITIALIZE_POOL_IN_RECONSTRUCT_STATE was added in 8.0.11.

- Error: 11771 SQLSTATE: HY000 (ER_LDAP_AUTH_FAILED_TO_DEINITIALIZE_NOT_READY_POOL)

  Message: Failed to pool deinitialized : pool is not ready

  ER_LDAP_AUTH_FAILED_TO_DEINITIALIZE_NOT_READY_POOL was added in 8.0.11.

- Error: 11772 SQLSTATE: HY000 (ER_LDAP_AUTH_FAILED_TO_GET_CONNECTION_AS_PLUGIN_NOT_READY)

  Message: Ldap_connection_pool::get: Failed to return connection as plug-in is not ready/initializing/de-initializing

  ER_LDAP_AUTH_FAILED_TO_GET_CONNECTION_AS_PLUGIN_NOT_READY was added in 8.0.11.

- Error: 11773 SQLSTATE: HY000 (ER_LDAP_AUTH_CONNECTION_POOL_INIT_FAILED)

  Message: Connection pool has failed to initialized

  ER_LDAP_AUTH_CONNECTION_POOL_INIT_FAILED was added in 8.0.11.

- Error: 11774 SQLSTATE: HY000 (ER_LDAP_AUTH_MAX_ALLOWED_CONNECTION_LIMIT_HIT)

  Message: Ldap_connetion_pool::get LDAP maximum connection allowed size is reached. Increase the maximum limit.

  ER_LDAP_AUTH_MAX_ALLOWED_CONNECTION_LIMIT_HIT was added in 8.0.11.

- Error: 11775 SQLSTATE: HY000 (ER_LDAP_AUTH_MAX_POOL_SIZE_SET_FAILED)

  Message: Set max pool size failed.

  ER_LDAP_AUTH_MAX_POOL_SIZE_SET_FAILED was added in 8.0.11.

- Error: 11776 SQLSTATE: HY000 (ER_LDAP_AUTH_PLUGIN_FAILED_TO_READ_PACKET)

Message: Plug-in has failed to read the packet from client

`ER_LDAP_AUTH_PLUGIN_FAILED_TO_READ_PACKET` was added in 8.0.11.

- Error: `11777` SQLSTATE: `HY000` (`ER_LDAP_AUTH_CREATING_LDAP_CONNECTION`)

  Message: Ldap_authentication::initialize: creating new LDAP connection.

  `ER_LDAP_AUTH_CREATING_LDAP_CONNECTION` was added in 8.0.11.

- Error: `11778` SQLSTATE: `HY000` (`ER_LDAP_AUTH_GETTING_CONNECTION_FROM_POOL`)

  Message: Ldap_authentication::initialize: getting connection from pool.

  `ER_LDAP_AUTH_GETTING_CONNECTION_FROM_POOL` was added in 8.0.11.

- Error: `11779` SQLSTATE: `HY000` (`ER_LDAP_AUTH_RETURNING_CONNECTION_TO_POOL`)

  Message: Ldap_authentication::de_initialize putting back connection in the pool

  `ER_LDAP_AUTH_RETURNING_CONNECTION_TO_POOL` was added in 8.0.11.

- Error: `11780` SQLSTATE: `HY000` (`ER_LDAP_AUTH_SEARCH_USER_GROUP_ATTR_NOT_FOUND`)

  Message: Ldap_authentication::search_user_group no group attribute found

  `ER_LDAP_AUTH_SEARCH_USER_GROUP_ATTR_NOT_FOUND` was added in 8.0.11.

- Error: `11781` SQLSTATE: `HY000` (`ER_LDAP_AUTH_LDAP_INFO_NULL`)

  Message: Ldap_connetion_pool::put ldap info null

  `ER_LDAP_AUTH_LDAP_INFO_NULL` was added in 8.0.11.

- Error: `11782` SQLSTATE: `HY000` (`ER_LDAP_AUTH_FREEING_CONNECTION`)

  Message: Ldap_connection_pool::put connection is freeing.

  `ER_LDAP_AUTH_FREEING_CONNECTION` was added in 8.0.11.

- Error: `11783` SQLSTATE: `HY000` (`ER_LDAP_AUTH_CONNECTION_PUSHED_TO_POOL`)

  Message: Ldap_connection_pool::put connection in pushed in the pool

  `ER_LDAP_AUTH_CONNECTION_PUSHED_TO_POOL` was added in 8.0.11.

- Error: `11784` SQLSTATE: `HY000` (`ER_LDAP_AUTH_CONNECTION_CREATOR_ENTER`)

  Message: Ldap_connection_creator::Ldap_connection_creator

  `ER_LDAP_AUTH_CONNECTION_CREATOR_ENTER` was added in 8.0.11.

- Error: `11785` SQLSTATE: `HY000` (`ER_LDAP_AUTH_STARTING_TLS`)

  Message: starting TLS

  `ER_LDAP_AUTH_STARTING_TLS` was added in 8.0.11.

- Error: `11786` SQLSTATE: `HY000` (`ER_LDAP_AUTH_CONNECTION_GET_LDAP_INFO_NULL`)

  Message: Ldap_connection_pool::get: (ldap_info == NULL)|| (*ldap_info)

  `ER_LDAP_AUTH_CONNECTION_GET_LDAP_INFO_NULL` was added in 8.0.11.

- Error: 11787 SQLSTATE: HY000 (ER_LDAP_AUTH_DELETING_CONNECTION_KEY)

  Message: Ldap_connection_pool::deinit: deleting connection key %s

  ER_LDAP_AUTH_DELETING_CONNECTION_KEY was added in 8.0.11.

- Error: 11788 SQLSTATE: HY000 (ER_LDAP_AUTH_POOLED_CONNECTION_KEY)

  Message: Ldap_connection_pool::get pooled connection key: %s

  ER_LDAP_AUTH_POOLED_CONNECTION_KEY was added in 8.0.11.

- Error: 11789 SQLSTATE: HY000 (ER_LDAP_AUTH_CREATE_CONNECTION_KEY)

  Message: Ldap_connection_pool::get create connection key: %s

  ER_LDAP_AUTH_CREATE_CONNECTION_KEY was added in 8.0.11.

- Error: 11790 SQLSTATE: HY000 (ER_LDAP_AUTH_COMMUNICATION_HOST_INFO)

  Message: LDAP communication host %s port %u

  ER_LDAP_AUTH_COMMUNICATION_HOST_INFO was added in 8.0.11.

- Error: 11791 SQLSTATE: HY000 (ER_LDAP_AUTH_METHOD_TO_CLIENT)

  Message: Sending authentication method to client : %s

  ER_LDAP_AUTH_METHOD_TO_CLIENT was added in 8.0.11.

- Error: 11792 SQLSTATE: HY000 (ER_LDAP_AUTH_SASL_REQUEST_FROM_CLIENT)

  Message: SASL request received from mysql client: %s

  ER_LDAP_AUTH_SASL_REQUEST_FROM_CLIENT was added in 8.0.11.

- Error: 11793 SQLSTATE: HY000 (ER_LDAP_AUTH_SASL_PROCESS_SASL)

  Message: Ldap_sasl_authentication::process_sasl rc: %s

  ER_LDAP_AUTH_SASL_PROCESS_SASL was added in 8.0.11.

- Error: 11794 SQLSTATE: HY000 (ER_LDAP_AUTH_SASL_BIND_SUCCESS_INFO)

  Message: Ldap_sasl_authentication::process_sasl sasl bind succeed. dn: %s method: %s server credential: %s

  ER_LDAP_AUTH_SASL_BIND_SUCCESS_INFO was added in 8.0.11.

- Error: 11795 SQLSTATE: HY000 (ER_LDAP_AUTH_STARTED_FOR_USER)

  Message: LDAP authentication started for user name: %s

  ER_LDAP_AUTH_STARTED_FOR_USER was added in 8.0.11.

- Error: 11796 SQLSTATE: HY000 (ER_LDAP_AUTH_DISTINGUISHED_NAME)

  Message: %s

  ER_LDAP_AUTH_DISTINGUISHED_NAME was added in 8.0.11.

- Error: 11797 SQLSTATE: HY000 (ER_LDAP_AUTH_INIT_FAILED)

  Message: LDAP authentication initialize is failed with: %s

ER_LDAP_AUTH_INIT_FAILED was added in 8.0.11.

- Error: 11798 SQLSTATE: HY000 (ER_LDAP_AUTH_OR_GROUP_RETRIEVAL_FAILED)

  Message: LDAP authentication failed or group retrieval failed: %s

  ER_LDAP_AUTH_OR_GROUP_RETRIEVAL_FAILED was added in 8.0.11.

- Error: 11799 SQLSTATE: HY000 (ER_LDAP_AUTH_USER_GROUP_SEARCH_FAILED)

  Message: Search user group has failed: %s

  ER_LDAP_AUTH_USER_GROUP_SEARCH_FAILED was added in 8.0.11.

- Error: 11800 SQLSTATE: HY000 (ER_LDAP_AUTH_USER_BIND_FAILED)

  Message: LDAP user bind has failed: %s

  ER_LDAP_AUTH_USER_BIND_FAILED was added in 8.0.11.

- Error: 11801 SQLSTATE: HY000 (ER_LDAP_AUTH_POOL_GET_FAILED_TO_CREATE_CONNECTION)

  Message: Connection pool get: Failed to create LDAP connection. %s

  ER_LDAP_AUTH_POOL_GET_FAILED_TO_CREATE_CONNECTION was added in 8.0.11.

- Error: 11802 SQLSTATE: HY000 (ER_LDAP_AUTH_FAILED_TO_CREATE_LDAP_CONNECTION)

  Message: Failed to create new LDAP connection: %s

  ER_LDAP_AUTH_FAILED_TO_CREATE_LDAP_CONNECTION was added in 8.0.11.

- Error: 11803 SQLSTATE: HY000 (ER_LDAP_AUTH_FAILED_TO_ESTABLISH_TLS_CONNECTION)

  Message: Failed to establish TLS connection: %s

  ER_LDAP_AUTH_FAILED_TO_ESTABLISH_TLS_CONNECTION was added in 8.0.11.

- Error: 11804 SQLSTATE: HY000 (ER_LDAP_AUTH_FAILED_TO_SEARCH_DN)

  Message: Failed to search user full dn: %s

  ER_LDAP_AUTH_FAILED_TO_SEARCH_DN was added in 8.0.11.

- Error: 11805 SQLSTATE: HY000 (ER_LDAP_AUTH_CONNECTION_POOL_REINIT_ENTER)

  Message: Ldap_connection_pool::reinit

  ER_LDAP_AUTH_CONNECTION_POOL_REINIT_ENTER was added in 8.0.11.

- Error: 11806 SQLSTATE: HY000 (ER_SYSTEMD_NOTIFY_PATH_TOO_LONG)

  Message: The path path '%s', from the NOTIFY_SOCKET environment variable, is too long. At %u bytes it exceeds the limit of %u bytes for an AF_UNIX socket.

  ER_SYSTEMD_NOTIFY_PATH_TOO_LONG was added in 8.0.11.

- Error: 11807 SQLSTATE: HY000 (ER_SYSTEMD_NOTIFY_CONNECT_FAILED)

  Message: Failed to connect to systemd notification socket named %s. Error: '%s'

  ER_SYSTEMD_NOTIFY_CONNECT_FAILED was added in 8.0.11.

- Error: 11808 SQLSTATE: HY000 (ER_SYSTEMD_NOTIFY_WRITE_FAILED)

  Message: Failed to write '%s' to systemd notification. Error: '%s'

  ER_SYSTEMD_NOTIFY_WRITE_FAILED was added in 8.0.11.

- Error: 11809 SQLSTATE: HY000 (ER_FOUND_MISSING_GTIDS)

  Message: Cannot replicate to server with server_uuid='%s' because the present server has purged required binary logs. The connecting server needs to replicate the missing transactions from elsewhere, or be replaced by a new server created from a more recent backup. To prevent this error in the future, consider increasing the binary log expiration period on the present server. The missing transactions are '%s'.

  ER_FOUND_MISSING_GTIDS was added in 8.0.11.

- Error: 11810 SQLSTATE: HY000 (ER_PID_FILE_PRIV_DIRECTORY_INSECURE)

  Message: Insecure configuration for --pid-file: Location '%s' in the path is accessible to all OS users. Consider choosing a different directory.

  ER_PID_FILE_PRIV_DIRECTORY_INSECURE was added in 8.0.11.

- Error: 11811 SQLSTATE: HY000 (ER_CANT_CHECK_PID_PATH)

  Message: Can't start server: can't check PID filepath: %s

  ER_CANT_CHECK_PID_PATH was added in 8.0.11.

- Error: 11812 SQLSTATE: HY000 (ER_VALIDATE_PWD_STATUS_VAR_REGISTRATION_FAILED)

  Message: validate_password status variables registration failed.

  ER_VALIDATE_PWD_STATUS_VAR_REGISTRATION_FAILED was added in 8.0.11.

- Error: 11813 SQLSTATE: HY000 (ER_VALIDATE_PWD_STATUS_VAR_UNREGISTRATION_FAILED)

  Message: validate_password status variables unregistration failed.

  ER_VALIDATE_PWD_STATUS_VAR_UNREGISTRATION_FAILED was added in 8.0.11.

- Error: 11814 SQLSTATE: HY000 (ER_VALIDATE_PWD_DICT_FILE_OPEN_FAILED)

  Message: Dictionary file open failed

  ER_VALIDATE_PWD_DICT_FILE_OPEN_FAILED was added in 8.0.11.

- Error: 11815 SQLSTATE: HY000 (ER_VALIDATE_PWD_COULD_BE_NULL)

  Message: given password string could be null

  ER_VALIDATE_PWD_COULD_BE_NULL was added in 8.0.11.

- Error: 11816 SQLSTATE: HY000 (ER_VALIDATE_PWD_STRING_CONV_TO_LOWERCASE_FAILED)

  Message: failed to convert the password string to lower case

  ER_VALIDATE_PWD_STRING_CONV_TO_LOWERCASE_FAILED was added in 8.0.11.

- Error: 11817 SQLSTATE: HY000 (ER_VALIDATE_PWD_STRING_CONV_TO_BUFFER_FAILED)

  Message: failed to convert the password string into a buffer

ER_VALIDATE_PWD_STRING_CONV_TO_BUFFER_FAILED was added in 8.0.11.

- Error: 11818 SQLSTATE: HY000 (ER_VALIDATE_PWD_STRING_HANDLER_MEM_ALLOCATION_FAILED)

  Message: memory allocation failed for string handler

  ER_VALIDATE_PWD_STRING_HANDLER_MEM_ALLOCATION_FAILED was added in 8.0.11.

- Error: 11819 SQLSTATE: HY000 (ER_VALIDATE_PWD_STRONG_POLICY_DICT_FILE_UNSPECIFIED)

  Message: Since the validate_password_policy is mentioned as Strong, dictionary file must be specified

  ER_VALIDATE_PWD_STRONG_POLICY_DICT_FILE_UNSPECIFIED was added in 8.0.11.

- Error: 11820 SQLSTATE: HY000 (ER_VALIDATE_PWD_CONVERT_TO_BUFFER_FAILED)

  Message: convert_to_buffer service failed

  ER_VALIDATE_PWD_CONVERT_TO_BUFFER_FAILED was added in 8.0.11.

- Error: 11821 SQLSTATE: HY000 (ER_VALIDATE_PWD_VARIABLE_REGISTRATION_FAILED)

  Message: %s variable registration failed.

  ER_VALIDATE_PWD_VARIABLE_REGISTRATION_FAILED was added in 8.0.11.

- Error: 11822 SQLSTATE: HY000 (ER_VALIDATE_PWD_VARIABLE_UNREGISTRATION_FAILED)

  Message: %s variable unregistration failed.

  ER_VALIDATE_PWD_VARIABLE_UNREGISTRATION_FAILED was added in 8.0.11.

- Error: 11823 SQLSTATE: HY000 (ER_KEYRING_MIGRATION_EXTRA_OPTIONS)

  Message: Please specify options specific to keyring migration. Any additional options can be ignored. NOTE: Although some options are valid, migration tool can still report error example: plugin variables for which plugin is not loaded yet.

  ER_KEYRING_MIGRATION_EXTRA_OPTIONS was added in 8.0.11.

- Error: 11825 SQLSTATE: HY000 (ER_IB_MSG_0)

  Message: %s

  ER_IB_MSG_0 was added in 8.0.11.

- Error: 11826 SQLSTATE: HY000 (ER_IB_MSG_1)

  Message: %s

  ER_IB_MSG_1 was added in 8.0.11.

- Error: 11827 SQLSTATE: HY000 (ER_IB_MSG_2)

  Message: %s

  ER_IB_MSG_2 was added in 8.0.11.

- Error: 11828 SQLSTATE: HY000 (ER_IB_MSG_3)

Message: %s

ER_IB_MSG_3 was added in 8.0.11.

- Error: 11829 SQLSTATE: HY000 (ER_IB_MSG_4)

  Message: %s

  ER_IB_MSG_4 was added in 8.0.11.

  Message: %s

  ER_IB_MSG_270 was added in 8.0.11.

- Error: 12096 SQLSTATE: HY000 (ER_IB_MSG_271)

  Message: %s

  ER_IB_MSG_271 was added in 8.0.11.

- Error: 12097 SQLSTATE: HY000 (ER_IB_MSG_272)

  Message: Table flags are %lx in the data dictionary but the flags in file %s are %lx!

  ER_IB_MSG_272 was added in 8.0.11.

- Error: 12098 SQLSTATE: HY000 (ER_IB_MSG_273)

  Message: Can't read encryption key from file %s!

  ER_IB_MSG_273 was added in 8.0.11.

- Error: 12099 SQLSTATE: HY000 (ER_IB_MSG_274)

  Message: Cannot close file %s, because n_pending_flushes %lu

  ER_IB_MSG_274 was added in 8.0.11.

- Error: 12100 SQLSTATE: HY000 (ER_IB_MSG_275)

  Message: Cannot close file %s, because modification count %llu != flush count %llu

  ER_IB_MSG_275 was added in 8.0.11.

- Error: 12101 SQLSTATE: HY000 (ER_IB_MSG_276)

  Message: Cannot close file %s, because it is in use

  ER_IB_MSG_276 was added in 8.0.11.

- Error: 12102 SQLSTATE: HY000 (ER_IB_MSG_277)

  Message: Open file list len in shard %lu is %lu

  ER_IB_MSG_277 was added in 8.0.11.

- Error: 12103 SQLSTATE: HY000 (ER_IB_MSG_278)

  Message: Tablespace %s, waiting for IO to stop for %lu seconds

  ER_IB_MSG_278 was added in 8.0.11.

- Error: 12104 SQLSTATE: HY000 (ER_IB_MSG_279)

  Message: %s

  ER_IB_MSG_279 was added in 8.0.11.

- Error: 12105 SQLSTATE: HY000 (ER_IB_MSG_280)

  Message: %s

  ER_IB_MSG_280 was added in 8.0.11.

- Error: 12106 SQLSTATE: HY000 (ER_IB_MSG_281)

  Message: %s

  ER_IB_MSG_281 was added in 8.0.11.

- Error: 12107 SQLSTATE: HY000 (ER_IB_MSG_282)

  Message: %s

  ER_IB_MSG_282 was added in 8.0.11.

- Error: 12108 SQLSTATE: HY000 (ER_IB_MSG_283)

  Message: %s

  ER_IB_MSG_283 was added in 8.0.11.

- Error: 12109 SQLSTATE: HY000 (ER_IB_MSG_284)

  Message: You must raise the value of innodb_open_files in my.cnf! Remember that InnoDB keeps all log files and all system tablespace files open for the whole time mysqld is running, and needs to open also some .ibd files if the file-per-table storage model is used. Current open files %lu, max allowed open files %lu.

  ER_IB_MSG_284 was added in 8.0.11.

- Error: 12110 SQLSTATE: HY000 (ER_IB_MSG_285)

  Message: Max tablespace id is too high, %lu

  ER_IB_MSG_285 was added in 8.0.11.

- Error: 12111 SQLSTATE: HY000 (ER_IB_MSG_286)

  Message: Trying to access missing tablespace %lu

  ER_IB_MSG_286 was added in 8.0.11.

- Error: 12112 SQLSTATE: HY000 (ER_IB_MSG_287)

  Message: Trying to close/delete tablespace '%s' but there are %lu pending operations on it.

  ER_IB_MSG_287 was added in 8.0.11.

- Error: 12113 SQLSTATE: HY000 (ER_IB_MSG_288)

Message: Trying to delete/close tablespace '%s' but there are %lu flushes and %lu pending I/O's on it.

`ER_IB_MSG_288` was added in 8.0.11.

- Error: `12114` SQLSTATE: `HY000` (`ER_IB_MSG_289`)

  Message: %s

  `ER_IB_MSG_289` was added in 8.0.11.

- Error: `12115` SQLSTATE: `HY000` (`ER_IB_MSG_290`)

  Message: Cannot delete tablespace %lu because it is not found in the tablespace memory cache.

  `ER_IB_MSG_290` was added in 8.0.11.

- Error: `12116` SQLSTATE: `HY000` (`ER_IB_MSG_291`)

  Message: While deleting tablespace %lu in DISCARD TABLESPACE. File rename/delete failed: %s

  `ER_IB_MSG_291` was added in 8.0.11.

- Error: `12117` SQLSTATE: `HY000` (`ER_IB_MSG_292`)

  Message: Cannot delete tablespace %lu in DISCARD TABLESPACE: %s

  `ER_IB_MSG_292` was added in 8.0.11.

- Error: `12118` SQLSTATE: `HY000` (`ER_IB_MSG_293`)

  Message: Cannot rename '%s' to '%s' for space ID %lu because the source file does not exist.

  `ER_IB_MSG_293` was added in 8.0.11.

- Error: `12119` SQLSTATE: `HY000` (`ER_IB_MSG_294`)

  Message: Cannot rename '%s' to '%s' for space ID %lu because the target file exists. Remove the target file and try again.

  `ER_IB_MSG_294` was added in 8.0.11.

- Error: `12120` SQLSTATE: `HY000` (`ER_IB_MSG_295`)

  Message: Cannot rename file '%s' (space id %lu) retried %lu times. There are either pending IOs or flushes or the file is being extended.

  `ER_IB_MSG_295` was added in 8.0.11.

- Error: `12121` SQLSTATE: `HY000` (`ER_IB_MSG_296`)

  Message: Cannot find space id %lu in the tablespace memory cache, though the file '%s' in a rename operation should have that ID.

  `ER_IB_MSG_296` was added in 8.0.11.

- Error: `12122` SQLSTATE: `HY000` (`ER_IB_MSG_297`)

  Message: Rename waiting for IO to resume

  `ER_IB_MSG_297` was added in 8.0.11.

- Error: `12123` SQLSTATE: `HY000` (`ER_IB_MSG_298`)

Message: Cannot find tablespace for '%s' in the tablespace memory cache

`ER_IB_MSG_298` was added in 8.0.11.

- Error: `12124` SQLSTATE: `HY000` (`ER_IB_MSG_299`)

  Message: Cannot find tablespace for '%s' in the tablespace memory cache

  `ER_IB_MSG_299` was added in 8.0.11.

- Error: `12125` SQLSTATE: `HY000` (`ER_IB_MSG_300`)

  Message: Tablespace '%s' is already in the tablespace memory cache

  `ER_IB_MSG_300` was added in 8.0.11.

- Error: `12126` SQLSTATE: `HY000` (`ER_IB_MSG_301`)

  Message: Cannot create file '%s'

  `ER_IB_MSG_301` was added in 8.0.11.

- Error: `12127` SQLSTATE: `HY000` (`ER_IB_MSG_302`)

  Message: The file '%s' already exists though the corresponding table did not exist. Have you moved InnoDB .ibd files around without using the SQL commands DISCARD TABLESPACE and IMPORT TABLESPACE, or did mysqld crash in the middle of CREATE TABLE? You can resolve the problem by removing the file '%s' under the 'datadir' of MySQL.

  `ER_IB_MSG_302` was added in 8.0.11.

- Error: `12128` SQLSTATE: `HY000` (`ER_IB_MSG_303`)

  Message: posix_fallocate(): Failed to preallocate data for file %s, desired size %lu Operating system error number %d. Check that the disk is not full or a disk quota exceeded. Make sure the file system supports this function. Some operating system error numbers are described at %s operating-system-error-codes.html

  `ER_IB_MSG_303` was added in 8.0.11.

- Error: `12129` SQLSTATE: `HY000` (`ER_IB_MSG_304`)

  Message: Could not write the first page to tablespace '%s'

  `ER_IB_MSG_304` was added in 8.0.11.

- Error: `12130` SQLSTATE: `HY000` (`ER_IB_MSG_305`)

  Message: File flush of tablespace '%s' failed

  `ER_IB_MSG_305` was added in 8.0.11.

- Error: `12131` SQLSTATE: `HY000` (`ER_IB_MSG_306`)

  Message: Could not find a valid tablespace file for `%s`. %s

  `ER_IB_MSG_306` was added in 8.0.11.

- Error: `12132` SQLSTATE: `HY000` (`ER_IB_MSG_307`)

  Message: Ignoring data file '%s' with space ID %lu. Another data file called '%s' exists with the same space ID

ER_IB_MSG_307 was added in 8.0.11.

- Error: 12133 SQLSTATE: HY000 (ER_IB_MSG_308)

  Message: %s

  ER_IB_MSG_308 was added in 8.0.11.

- Error: 12134 SQLSTATE: HY000 (ER_IB_MSG_309)

  Message: %s

  ER_IB_MSG_309 was added in 8.0.11.

- Error: 12135 SQLSTATE: HY000 (ER_IB_MSG_310)

  Message: %s

  ER_IB_MSG_310 was added in 8.0.11.

- Error: 12136 SQLSTATE: HY000 (ER_IB_MSG_311)

  Message: %s

  ER_IB_MSG_311 was added in 8.0.11.

- Error: 12137 SQLSTATE: HY000 (ER_IB_MSG_312)

  Message: Can't set encryption information for tablespace %s!

  ER_IB_MSG_312 was added in 8.0.11.

- Error: 12138 SQLSTATE: HY000 (ER_IB_MSG_313)

  Message: %s

  ER_IB_MSG_313 was added in 8.0.11.

- Error: 12139 SQLSTATE: HY000 (ER_IB_MSG_314)

  Message: %s

  ER_IB_MSG_660 was added in 8.0.11.

- Error: 12486 SQLSTATE: HY000 (ER_IB_MSG_661)

  Message: %s

  ER_IB_MSG_661 was added in 8.0.11.

- Error: 12487 SQLSTATE: HY000 (ER_IB_MSG_662)

  Message: %s

  ER_IB_MSG_662 was added in 8.0.11.

- Error: 12488 SQLSTATE: HY000 (ER_IB_MSG_663)

  Message: %s

  ER_IB_MSG_663 was added in 8.0.11.

- Error: 12489 SQLSTATE: HY000 (ER_IB_MSG_664)

  Message: The transaction log size is too large for innodb_log_buffer_size (%lu >= %lu / 2). Trying to extend it.

  ER_IB_MSG_664 was added in 8.0.11.

- Error: 12490 SQLSTATE: HY000 (ER_IB_MSG_665)

  Message: innodb_log_buffer_size was extended to %lu bytes.

  ER_IB_MSG_665 was added in 8.0.11.

- Error: 12491 SQLSTATE: HY000 (ER_IB_MSG_666)

  Message: The transaction log files are too small for the single transaction log (size=%lu). So, the last checkpoint age might exceed the log group capacity %llu.

  ER_IB_MSG_666 was added in 8.0.11.

- Error: 12492 SQLSTATE: HY000 (ER_IB_MSG_667)

  Message: The age of the last checkpoint is %llu, which exceeds the log group capacity %llu.

  ER_IB_MSG_667 was added in 8.0.11.

- Error: 12493 SQLSTATE: HY000 (ER_IB_MSG_668)

  Message: Cannot continue operation. ib_logfiles are too small for innodb_thread_concurrency %lu. The combined size of ib_logfiles should be bigger than 200 kB * innodb_thread_concurrency. To get mysqld to start up, set innodb_thread_concurrency in my.cnf to a lower value, for example, to 8. After an ERROR-FREE shutdown of mysqld you can adjust the size of ib_logfiles. %s

  ER_IB_MSG_668 was added in 8.0.11.

- Error: 12494 SQLSTATE: HY000 (ER_IB_MSG_669)

  Message: Redo log was encrypted, but keyring plugin is not loaded.

  ER_IB_MSG_669 was added in 8.0.11.

- Error: 12495 SQLSTATE: HY000 (ER_IB_MSG_670)

  Message: Read redo log encryption metadata successful.

  ER_IB_MSG_670 was added in 8.0.11.

- Error: 12496 SQLSTATE: HY000 (ER_IB_MSG_671)

  Message: Can't set redo log tablespace encryption metadata.

  ER_IB_MSG_671 was added in 8.0.11.

- Error: 12497 SQLSTATE: HY000 (ER_IB_MSG_672)

  Message: Cannot read the encryption information in log file header, please check if keyring plugin loaded and the key file exists.

  ER_IB_MSG_672 was added in 8.0.11.

- Error: 12498 SQLSTATE: HY000 (ER_IB_MSG_673)

  Message: Can't set redo log tablespace to be encrypted in read-only mode.

  ER_IB_MSG_673 was added in 8.0.11.

- Error: 12499 SQLSTATE: HY000 (ER_IB_MSG_674)

  Message: Can't set redo log tablespace to be encrypted.

  ER_IB_MSG_674 was added in 8.0.11.

- Error: 12500 SQLSTATE: HY000 (ER_IB_MSG_675)

  Message: Can't set redo log tablespace to be encrypted.

  ER_IB_MSG_675 was added in 8.0.11.

- Error: 12501 SQLSTATE: HY000 (ER_IB_MSG_676)

  Message: Redo log encryption is enabled.

  ER_IB_MSG_676 was added in 8.0.11.

- Error: 12502 SQLSTATE: HY000 (ER_IB_MSG_677)

  Message: Flush Waiting for archiver to to catch up lag LSN: %llu

  ER_IB_MSG_677 was added in 8.0.11.

- Error: 12503 SQLSTATE: HY000 (ER_IB_MSG_678)

  Message: Flush overwriting data to archive - wait too long (1 minute) lag LSN: %llu

  ER_IB_MSG_678 was added in 8.0.11.

- Error: 12504 SQLSTATE: HY000 (ER_IB_MSG_679)

  Message: %s

ER_IB_MSG_679 was added in 8.0.11.

- Error: 12505 SQLSTATE: HY000 (ER_IB_MSG_680)

  Message: Starting shutdown...

  ER_IB_MSG_680 was added in 8.0.11.

- Error: 12506 SQLSTATE: HY000 (ER_IB_MSG_681)

  Message: Waiting for %s to exit

  ER_IB_MSG_681 was added in 8.0.11.

- Error: 12507 SQLSTATE: HY000 (ER_IB_MSG_682)

  Message: Waiting for %lu active transactions to finish

  ER_IB_MSG_682 was added in 8.0.11.

- Error: 12508 SQLSTATE: HY000 (ER_IB_MSG_683)

  Message: Waiting for master thread to be suspended

  ER_IB_MSG_683 was added in 8.0.11.

- Error: 12509 SQLSTATE: HY000 (ER_IB_MSG_684)

  Message: Waiting for page_cleaner to finish flushing of buffer pool

  ER_IB_MSG_684 was added in 8.0.11.

- Error: 12510 SQLSTATE: HY000 (ER_IB_MSG_685)

  Message: Pending checkpoint_writes: %lu. Pending log flush writes: %lu.

  ER_IB_MSG_685 was added in 8.0.11.

- Error: 12511 SQLSTATE: HY000 (ER_IB_MSG_686)

  Message: Waiting for %lu buffer page I/Os to complete

  ER_IB_MSG_686 was added in 8.0.11.

- Error: 12512 SQLSTATE: HY000 (ER_IB_MSG_687)

  Message: MySQL has requested a very fast shutdown without flushing the InnoDB buffer pool to data files. At the next mysqld startup InnoDB will do a crash recovery!

  ER_IB_MSG_687 was added in 8.0.11.

- Error: 12513 SQLSTATE: HY000 (ER_IB_MSG_688)

  Message: Background thread %s woke up during shutdown

  ER_IB_MSG_688 was added in 8.0.11.

- Error: 12514 SQLSTATE: HY000 (ER_IB_MSG_689)

  Message: Waiting for archiver to finish archiving page and log

  ER_IB_MSG_689 was added in 8.0.11.

- Error: 12515 SQLSTATE: HY000 (ER_IB_MSG_690)

Message: Background thread %s woke up during shutdown

`ER_IB_MSG_690` was added in 8.0.11.

- Error: `12516` SQLSTATE: `HY000` (`ER_IB_MSG_691`)

  Message: Waiting for dirty buffer pages to be flushed

  `ER_IB_MSG_691` was added in 8.0.11.

- Error: `12517` SQLSTATE: `HY000` (`ER_IB_MSG_692`)

  Message: Log sequence number at shutdown %llu is lower than at startup %llu!

  `ER_IB_MSG_692` was added in 8.0.11.

- Error: `12518` SQLSTATE: `HY000` (`ER_IB_MSG_693`)

  Message: Waiting for archiver to finish archiving page and log

  `ER_IB_MSG_693` was added in 8.0.11.

- Error: `12519` SQLSTATE: `HY000` (`ER_IB_MSG_694`)

  Message: ################ CORRUPT LOG RECORD FOUND ################

  `ER_IB_MSG_694` was added in 8.0.11.

- Error: `12520` SQLSTATE: `HY000` (`ER_IB_MSG_695`)

  Message: Log record type %d, page %lu:%lu. Log parsing proceeded successfully up to %llu. Previous log record type %d, is multi %lu Recv offset %lu, prev %lu

  `ER_IB_MSG_695` was added in 8.0.11.

- Error: `12521` SQLSTATE: `HY000` (`ER_IB_MSG_696`)

  Message: Hex dump starting %lu bytes before and ending %lu bytes after the corrupted record:

  `ER_IB_MSG_696` was added in 8.0.11.

- Error: `12522` SQLSTATE: `HY000` (`ER_IB_MSG_697`)

  Message: Set innodb_force_recovery to ignore this error.

  `ER_IB_MSG_697` was added in 8.0.11.

- Error: `12523` SQLSTATE: `HY000` (`ER_IB_MSG_698`)

  Message: The log file may have been corrupt and it is possible that the log scan did not proceed far enough in recovery! Please run CHECK TABLE on your InnoDB tables to check that they are ok! If mysqld crashes after this recovery; %s

  `ER_IB_MSG_698` was added in 8.0.11.

- Error: `12524` SQLSTATE: `HY000` (`ER_IB_MSG_699`)

  Message: %lu pages with log records were left unprocessed!

  `ER_IB_MSG_699` was added in 8.0.11.

- Error: `12525` SQLSTATE: `HY000` (`ER_IB_MSG_700`)

Message: %s

`ER_IB_MSG_700` was added in 8.0.11.

- Error: `12526` SQLSTATE: `HY000` (`ER_IB_MSG_701`)

  Message: %s

  `ER_IB_MSG_701` was added in 8.0.11.

- Error: `12527` SQLSTATE: `HY000` (`ER_IB_MSG_702`)

  Message: Invalid redo log header checksum.

  `ER_IB_MSG_702` was added in 8.0.11.

- Error: `12528` SQLSTATE: `HY000` (`ER_IB_MSG_703`)

  Message: Unsupported redo log format (%lu). The redo log was created before MySQL 5.7.9

  `ER_IB_MSG_703` was added in 8.0.11.

- Error: `12529` SQLSTATE: `HY000` (`ER_IB_MSG_704`)

  Message: Redo log format is v%lu. The redo log was created before MySQL 8.0.3.

  `ER_IB_MSG_704` was added in 8.0.11.

- Error: `12530` SQLSTATE: `HY000` (`ER_IB_MSG_705`)

  Message: Unknown redo log format (%lu). Please follow the instructions at %s upgrading-downgrading.html.

  `ER_IB_MSG_705` was added in 8.0.11.

- Error: `12531` SQLSTATE: `HY000` (`ER_IB_MSG_706`)

  Message: No valid checkpoint found (corrupted redo log). You can try --innodb-force-recovery=6 as a last resort.

  `ER_IB_MSG_706` was added in 8.0.11.

- Error: `12532` SQLSTATE: `HY000` (`ER_IB_MSG_707`)

  Message: Applying a batch of %lu redo log records ...

  `ER_IB_MSG_707` was added in 8.0.11.

- Error: `12533` SQLSTATE: `HY000` (`ER_IB_MSG_708`)

  Message: %s

  `ER_IB_MSG_708` was added in 8.0.11.

  Message: %s

  ER_IB_MSG_716 was added in 8.0.11.

- Error: 12542 SQLSTATE: HY000 (ER_IB_MSG_717)

  Message: An optimized(without redo logging) DDL operation has been performed. All modified pages may not have been flushed to the disk yet. This offline backup may not be consistent

  ER_IB_MSG_717 was added in 8.0.11.

- Error: 12543 SQLSTATE: HY000 (ER_IB_MSG_718)

  Message: Extending tablespace : %lu space name: %s to new size: %lu pages during recovery.

  ER_IB_MSG_718 was added in 8.0.11.

- Error: 12544 SQLSTATE: HY000 (ER_IB_MSG_719)

  Message: Could not extend tablespace: %lu space name: %s to new size: %lu pages during recovery.

  ER_IB_MSG_719 was added in 8.0.11.

- Error: 12545 SQLSTATE: HY000 (ER_IB_MSG_720)

  Message: Log block %lu at lsn %llu has valid header, but checksum field contains %lu, should be %lu.

ER_IB_MSG_720 was added in 8.0.11.

- Error: 12546 SQLSTATE: HY000 (ER_IB_MSG_721)

  Message: Recovery skipped, --innodb-read-only set!

  ER_IB_MSG_721 was added in 8.0.11.

- Error: 12547 SQLSTATE: HY000 (ER_IB_MSG_722)

  Message: Log scan progressed past the checkpoint LSN %llu.

  ER_IB_MSG_722 was added in 8.0.11.

- Error: 12548 SQLSTATE: HY000 (ER_IB_MSG_723)

  Message: Log parsing buffer overflow. Recovery may have failed! Please set log_buffer_size to a value higher than %lu.

  ER_IB_MSG_723 was added in 8.0.11.

- Error: 12549 SQLSTATE: HY000 (ER_IB_MSG_724)

  Message: Set innodb_force_recovery to ignore this error.

  ER_IB_MSG_724 was added in 8.0.11.

- Error: 12550 SQLSTATE: HY000 (ER_IB_MSG_725)

  Message: Doing recovery: scanned up to log sequence number %llu

  ER_IB_MSG_725 was added in 8.0.11.

- Error: 12551 SQLSTATE: HY000 (ER_IB_MSG_726)

  Message: Database was not shutdown normally!

  ER_IB_MSG_726 was added in 8.0.11.

- Error: 12552 SQLSTATE: HY000 (ER_IB_MSG_727)

  Message: Starting crash recovery.

  ER_IB_MSG_727 was added in 8.0.11.

- Error: 12553 SQLSTATE: HY000 (ER_IB_MSG_728)

  Message: The user has set SRV_FORCE_NO_LOG_REDO on, skipping log redo

  ER_IB_MSG_728 was added in 8.0.11.

- Error: 12554 SQLSTATE: HY000 (ER_IB_MSG_729)

  Message: Cannot restore from mysqlbackup, InnoDB running in read-only mode!

  ER_IB_MSG_729 was added in 8.0.11.

- Error: 12555 SQLSTATE: HY000 (ER_IB_MSG_730)

  Message: The log file was created by mysqlbackup --apply-log at %s. The following crash recovery is part of a normal restore.

  ER_IB_MSG_730 was added in 8.0.11.

- Error: 12556 SQLSTATE: HY000 (ER_IB_MSG_731)

  Message: Opening cloned database

  ER_IB_MSG_731 was added in 8.0.11.

- Error: 12557 SQLSTATE: HY000 (ER_IB_MSG_732)

  Message: Redo log is from an earlier version, v%lu.

  ER_IB_MSG_732 was added in 8.0.11.

- Error: 12558 SQLSTATE: HY000 (ER_IB_MSG_733)

  Message: Redo log format v%lu not supported. Current supported format is v%lu.

  ER_IB_MSG_733 was added in 8.0.11.

- Error: 12559 SQLSTATE: HY000 (ER_IB_MSG_734)

  Message: Are you sure you are using the right ib_logfiles to start up the database? Log sequence number in the ib_logfiles is %llu, less than the log sequence number in the first system tablespace file header, %llu.

  ER_IB_MSG_734 was added in 8.0.11.

- Error: 12560 SQLSTATE: HY000 (ER_IB_MSG_735)

  Message: The log sequence number %llu in the system tablespace does not match the log sequence number %llu in the ib_logfiles!

  ER_IB_MSG_735 was added in 8.0.11.

- Error: 12561 SQLSTATE: HY000 (ER_IB_MSG_736)

  Message: Can't initiate database recovery, running in read-only-mode.

  ER_IB_MSG_736 was added in 8.0.11.

- Error: 12562 SQLSTATE: HY000 (ER_IB_MSG_737)

  Message: We scanned the log up to %llu. A checkpoint was at %llu and the maximum LSN on a database page was %llu. It is possible that the database is now corrupt!

  ER_IB_MSG_737 was added in 8.0.11.

- Error: 12563 SQLSTATE: HY000 (ER_IB_MSG_738)

  Message: Waiting for recv_writer to finish flushing of buffer pool

  ER_IB_MSG_738 was added in 8.0.11.

- Error: 12564 SQLSTATE: HY000 (ER_IB_MSG_739)

  Message: Recovery parsing buffer extended to %lu.

  ER_IB_MSG_739 was added in 8.0.11.

- Error: 12565 SQLSTATE: HY000 (ER_IB_MSG_740)

  `ER_IB_MSG_1050` was added in 8.0.11.

- Error: `12876` SQLSTATE: `HY000` (`ER_IB_MSG_1051`)

  Message: Can't set undo tablespace(s) to be encrypted in read-only-mode.

  `ER_IB_MSG_1051` was added in 8.0.11.

- Error: `12877` SQLSTATE: `HY000` (`ER_IB_MSG_1052`)

  Message: Can't set undo tablespace number %lu to be encrypted.

  `ER_IB_MSG_1052` was added in 8.0.11.

- Error: `12878` SQLSTATE: `HY000` (`ER_IB_MSG_1053`)

  Message: Can't set undo tablespace number %lu to be encrypted. Failed to write header page.

  `ER_IB_MSG_1053` was added in 8.0.11.

- Error: `12879` SQLSTATE: `HY000` (`ER_IB_MSG_1054`)

  Message: Can't set undo tablespace number %lu to be encrypted. Error %d - %s

  `ER_IB_MSG_1054` was added in 8.0.11.

- Error: `12880` SQLSTATE: `HY000` (`ER_IB_MSG_1055`)

  Message: Encryption is enabled for undo tablespace number %lu.

  `ER_IB_MSG_1055` was added in 8.0.11.

- Error: `12881` SQLSTATE: `HY000` (`ER_IB_MSG_1056`)

  Message: Can't rotate encryption on undo tablespace number %lu.

  `ER_IB_MSG_1056` was added in 8.0.11.

- Error: `12882` SQLSTATE: `HY000` (`ER_IB_MSG_1057`)

  Message: Encryption is enabled for undo tablespace number %lu.

  `ER_IB_MSG_1057` was added in 8.0.11.

- Error: `12883` SQLSTATE: `HY000` (`ER_IB_MSG_1058`)

  Message: os_file_get_status() failed on '%s'. Can't determine file permissions.

  `ER_IB_MSG_1058` was added in 8.0.11.

- Error: 12884 SQLSTATE: HY000 (ER_IB_MSG_1059)

  Message: %s can't be opened in %s mode.

  ER_IB_MSG_1059 was added in 8.0.11.

- Error: 12885 SQLSTATE: HY000 (ER_IB_MSG_1060)

  Message: '%s' not a regular file.

  ER_IB_MSG_1060 was added in 8.0.11.

- Error: 12886 SQLSTATE: HY000 (ER_IB_MSG_1061)

  Message: Cannot create %s

  ER_IB_MSG_1061 was added in 8.0.11.

- Error: 12887 SQLSTATE: HY000 (ER_IB_MSG_1062)

  Message: Setting log file %s size to %lu MB

  ER_IB_MSG_1062 was added in 8.0.11.

- Error: 12888 SQLSTATE: HY000 (ER_IB_MSG_1063)

  Message: Cannot set log file %s to size %lu MB

  ER_IB_MSG_1063 was added in 8.0.11.

- Error: 12889 SQLSTATE: HY000 (ER_IB_MSG_1064)

  Message: Cannot create log files in read-only mode

  ER_IB_MSG_1064 was added in 8.0.11.

- Error: 12890 SQLSTATE: HY000 (ER_IB_MSG_1065)

  Message: Redo log encryption is enabled, but the keyring plugin is not loaded.

  ER_IB_MSG_1065 was added in 8.0.11.

- Error: 12891 SQLSTATE: HY000 (ER_IB_MSG_1066)

  Message: Cannot create file for log file %s.

  ER_IB_MSG_1066 was added in 8.0.11.

- Error: 12892 SQLSTATE: HY000 (ER_IB_MSG_1067)

  Message: Renaming log file %s to %s

  ER_IB_MSG_1067 was added in 8.0.11.

- Error: 12893 SQLSTATE: HY000 (ER_IB_MSG_1068)

  Message: New log files created, LSN=%llu

  ER_IB_MSG_1068 was added in 8.0.11.

- Error: 12894 SQLSTATE: HY000 (ER_IB_MSG_1069)

  Message: Unable to open '%s'.

  ER_IB_MSG_1069 was added in 8.0.11.

- Error: 12895 SQLSTATE: HY000 (ER_IB_MSG_1070)

  Message: Cannot create construction log file for undo tablespace ID=%lu

  ER_IB_MSG_1070 was added in 8.0.11.

- Error: 12896 SQLSTATE: HY000 (ER_IB_MSG_1071)

  Message: Creating UNDO Tablespace %s

  ER_IB_MSG_1071 was added in 8.0.11.

- Error: 12897 SQLSTATE: HY000 (ER_IB_MSG_1072)

  Message: Setting file %s size to %lu MB

  ER_IB_MSG_1072 was added in 8.0.11.

- Error: 12898 SQLSTATE: HY000 (ER_IB_MSG_1073)

  Message: Physically writing the file full

  ER_IB_MSG_1073 was added in 8.0.11.

- Error: 12899 SQLSTATE: HY000 (ER_IB_MSG_1074)

  Message: Error in creating %s: probably out of disk space

  ER_IB_MSG_1074 was added in 8.0.11.

- Error: 12900 SQLSTATE: HY000 (ER_IB_MSG_1075)

  Message: Can't set encryption metadata for space %s

  ER_IB_MSG_1075 was added in 8.0.11.

- Error: 12901 SQLSTATE: HY000 (ER_IB_MSG_1076)

  Message: Cannot read first page of '%s' - %s

  ER_IB_MSG_1076 was added in 8.0.11.

- Error: 12902 SQLSTATE: HY000 (ER_IB_MSG_1077)

  Message: Undo tablespace number %lu was being truncated when mysqld quit.

  ER_IB_MSG_1077 was added in 8.0.11.

- Error: 12903 SQLSTATE: HY000 (ER_IB_MSG_1078)

  Message: Cannot recover a truncated undo tablespace in read-only mode

  ER_IB_MSG_1078 was added in 8.0.11.

- Error: 12904 SQLSTATE: HY000 (ER_IB_MSG_1079)

  Message: Reconstructing undo tablespace number %lu

  ER_IB_MSG_1079 was added in 8.0.11.

- Error: 12905 SQLSTATE: HY000 (ER_IB_MSG_1080)

  Message: Cannot create %s because %s already uses Space ID=%lu! Did you change innodb_undo_directory?

ER_IB_MSG_1080 was added in 8.0.11.

- Error: 12906 SQLSTATE: HY000 (ER_IB_MSG_1081)

  Message: UNDO tablespace %s must be %s

  ER_IB_MSG_1081 was added in 8.0.11.

- Error: 12907 SQLSTATE: HY000 (ER_IB_MSG_1082)

  Message: Error creating file for %s

  ER_IB_MSG_1082 was added in 8.0.11.

- Error: 12908 SQLSTATE: HY000 (ER_IB_MSG_1083)

  Message: Error reading encryption for %s

  ER_IB_MSG_1083 was added in 8.0.11.

- Error: 12909 SQLSTATE: HY000 (ER_IB_MSG_1084)

  Message: Unable to open undo tablespace number %lu

  ER_IB_MSG_1084 was added in 8.0.11.

- Error: 12910 SQLSTATE: HY000 (ER_IB_MSG_1085)

  Message: Opened %lu existing undo tablespaces.

  ER_IB_MSG_1085 was added in 8.0.11.

- Error: 12911 SQLSTATE: HY000 (ER_IB_MSG_1086)

  Message: Cannot create undo tablespaces since innodb_%s has been set. Using %lu existing undo tablespaces.

  ER_IB_MSG_1086 was added in 8.0.11.

- Error: 12912 SQLSTATE: HY000 (ER_IB_MSG_1087)

  Message: Cannot continue InnoDB startup in %s mode because there are no existing undo tablespaces found.

  ER_IB_MSG_1087 was added in 8.0.11.

- Error: 12913 SQLSTATE: HY000 (ER_IB_MSG_1088)

  Message: Could not create undo tablespace number %lu

  ER_IB_MSG_1088 was added in 8.0.11.

- Error: 12914 SQLSTATE: HY000 (ER_IB_MSG_1089)

  Message: Error %d - %s - opening newly created undo tablespace number %lu

  ER_IB_MSG_1089 was added in 8.0.11.

- Error: 12915 SQLSTATE: HY000 (ER_IB_MSG_1090)

  Message: Created %lu undo tablespaces.

  ER_IB_MSG_1090 was added in 8.0.11.

- Error: 12916 SQLSTATE: HY000 (ER_IB_MSG_1091)

  Message: Unable to create encrypted undo tablespace number %lu. please check if the keyring plugin is initialized correctly

  ER_IB_MSG_1091 was added in 8.0.11.

- Error: 12917 SQLSTATE: HY000 (ER_IB_MSG_1092)

  Message: Encryption is enabled for undo tablespace number %lu.

  ER_IB_MSG_1092 was added in 8.0.11.

- Error: 12918 SQLSTATE: HY000 (ER_IB_MSG_1093)

  Message: nable to initialize the header page in undo tablespace number %lu.

  ER_IB_MSG_1093 was added in 8.0.11.

- Error: 12919 SQLSTATE: HY000 (ER_IB_MSG_1094)

  Message: Cannot delete old undo tablespaces because they contain undo logs for XA PREPARED transactions.

  ER_IB_MSG_1094 was added in 8.0.11.

- Error: 12920 SQLSTATE: HY000 (ER_IB_MSG_1095)

  Message: Upgrading %lu existing undo tablespaces that were tracked in the system tablespace to %lu new independent undo tablespaces.

  ER_IB_MSG_1095 was added in 8.0.11.

- Error: 12921 SQLSTATE: HY000 (ER_IB_MSG_1096)

  Message: Deleting %lu new independent undo tablespaces that we just created.

  ER_IB_MSG_1096 was added in 8.0.11.

- Error: 12922 SQLSTATE: HY000 (ER_IB_MSG_1097)

  Message: Waiting for purge to start

  ER_IB_MSG_1097 was added in 8.0.11.

- Error: 12923 SQLSTATE: HY000 (ER_IB_MSG_1098)

  Message: Creating shared tablespace for temporary tables

  ER_IB_MSG_1098 was added in 8.0.11.

- Error: 12924 SQLSTATE: HY000 (ER_IB_MSG_1099)

  Message: The %s data file must be writable!

  ER_IB_MSG_1099 was added in 8.0.11.

- Error: 12925 SQLSTATE: HY000 (ER_IB_MSG_1100)

  Message: Could not create the shared %s.

  ER_IB_MSG_1100 was added in 8.0.11.

- Error: 12926 SQLSTATE: HY000 (ER_IB_MSG_1101)

Message: Unable to create the shared %s.

`ER_IB_MSG_1101` was added in 8.0.11.

- Error: `12927` SQLSTATE: `HY000` (`ER_IB_MSG_1102`)

  Message: The %s data file cannot be re-opened after check_file_spec() succeeded!

  `ER_IB_MSG_1102` was added in 8.0.11.

- Error: `12928` SQLSTATE: `HY000` (`ER_IB_MSG_1103`)

  Message: %d threads created by InnoDB had not exited at shutdown!

  `ER_IB_MSG_1103` was added in 8.0.11.

- Error: `12929` SQLSTATE: `HY000` (`ER_IB_MSG_1104`)

  Message: InnoDB Database creation was aborted %swith error %s. You may need to delete the ibdata1 file before trying to start up again.

  `ER_IB_MSG_1104` was added in 8.0.11.

- Error: `12930` SQLSTATE: `HY000` (`ER_IB_MSG_1105`)

  Message: Plugin initialization aborted %swith error %s.

  `ER_IB_MSG_1105` was added in 8.0.11.

- Error: `12931` SQLSTATE: `HY000` (`ER_IB_MSG_1106`)

  Message: Waiting for %lu buffer page I/Os to complete

  `ER_IB_MSG_1106` was added in 8.0.11.

- Error: `12932` SQLSTATE: `HY000` (`ER_IB_MSG_1107`)

  Message: PUNCH HOLE support available

  `ER_IB_MSG_1107` was added in 8.0.11.

- Error: `12933` SQLSTATE: `HY000` (`ER_IB_MSG_1108`)

  Message: PUNCH HOLE support not available

  `ER_IB_MSG_1108` was added in 8.0.11.

- Error: `12934` SQLSTATE: `HY000` (`ER_IB_MSG_1109`)

  Message: Size of InnoDB's ulint is %lu but size of void* is %lu. The sizes should be the same so that on a 64-bit platforms you can allocate more than 4 GB of memory.

  `ER_IB_MSG_1109` was added in 8.0.11.

- Error: `12935` SQLSTATE: `HY000` (`ER_IB_MSG_1110`)

  Message: Database upgrade cannot be accomplished in read-only mode.

  `ER_IB_MSG_1110` was added in 8.0.11.

- Error: `12936` SQLSTATE: `HY000` (`ER_IB_MSG_1111`)

  Message: Database upgrade cannot be accomplished with innodb_force_recovery > 0

ER_IB_MSG_1111 was added in 8.0.11.

- Error: 12937 SQLSTATE: HY000 (ER_IB_MSG_1112)

  Message: %s

  ER_IB_MSG_1112 was added in 8.0.11.

- Error: 12938 SQLSTATE: HY000 (ER_IB_MSG_1113)

  Message: %s

  ER_IB_MSG_1113 was added in 8.0.11.

- Error: 12939 SQLSTATE: HY000 (ER_IB_MSG_1114)

  Message: %s

  ER_IB_MSG_1114 was added in 8.0.11.

- Error: 12940 SQLSTATE: HY000 (ER_IB_MSG_1115)

  Message: %s

  ER_IB_MSG_1115 was added in 8.0.11.

- Error: 12941 SQLSTATE: HY000 (ER_IB_MSG_1116)

  Message: %s

  ER_IB_MSG_1116 was added in 8.0.11.

- Error: 12942 SQLSTATE: HY000 (ER_IB_MSG_1117)

  Message: %s

  ER_IB_MSG_1117 was added in 8.0.11.

- Error: 12943 SQLSTATE: HY000 (ER_IB_MSG_1118)

  Message: %s

  ER_IB_MSG_1118 was added in 8.0.11.

- Error: 12944 SQLSTATE: HY000 (ER_IB_MSG_1119)

  Message: %s

  ER_IB_MSG_1119 was added in 8.0.11.

- Error: 12945 SQLSTATE: HY000 (ER_IB_MSG_1120)

  Message: %s

  ER_IB_MSG_1120 was added in 8.0.11.

- Error: 12946 SQLSTATE: HY000 (ER_IB_MSG_1121)

  Message: %s

  ER_IB_MSG_1121 was added in 8.0.11.

- Error: 12947 SQLSTATE: HY000 (ER_IB_MSG_1122)

Message: MySQL was built without a memory barrier capability on this architecture, which might allow a mutex/rw_lock violation under high thread concurrency. This may cause a hang.

`ER_IB_MSG_1122` was added in 8.0.11.

- Error: `12948` SQLSTATE: `HY000` (`ER_IB_MSG_1123`)

  Message: Compressed tables use zlib %s

  `ER_IB_MSG_1123` was added in 8.0.11.

- Error: `12949` SQLSTATE: `HY000` (`ER_IB_MSG_1124`)

  Message: %s

  `ER_IB_MSG_1124` was added in 8.0.11.

- Error: `12950` SQLSTATE: `HY000` (`ER_IB_MSG_1125`)

  Message: Startup called second time during the process lifetime. In the MySQL Embedded Server Library you cannot call server_init() more than once during the process lifetime.

  `ER_IB_MSG_1125` was added in 8.0.11.

- Error: `12951` SQLSTATE: `HY000` (`ER_IB_MSG_1126`)

  Message: %s

  `ER_IB_MSG_1126` was added in 8.0.11.

- Error: `12952` SQLSTATE: `HY000` (`ER_IB_MSG_1127`)

  Message: Unable to create monitor file %s: %s

  `ER_IB_MSG_1127` was added in 8.0.11.

- Error: `12953` SQLSTATE: `HY000` (`ER_IB_MSG_1128`)

  Message: Disabling background log and ibuf IO write threads.

  `ER_IB_MSG_1128` was added in 8.0.11.

- Error: `12954` SQLSTATE: `HY000` (`ER_IB_MSG_1129`)

  Message: Cannot initialize AIO sub-system

  `ER_IB_MSG_1129` was added in 8.0.11.

- Error: `12955` SQLSTATE: `HY000` (`ER_IB_MSG_1130`)

  Message: Initializing buffer pool, total size = %lf%c, instances = %lu, chunk size =%lf%c

  `ER_IB_MSG_1130` was added in 8.0.11.

- Error: `12956` SQLSTATE: `HY000` (`ER_IB_MSG_1131`)

  Message: Cannot allocate memory for the buffer pool

  `ER_IB_MSG_1131` was added in 8.0.11.

- Error: `12957` SQLSTATE: `HY000` (`ER_IB_MSG_1132`)

  Message: Completed initialization of buffer pool

ER_IB_MSG_1132 was added in 8.0.11.

- Error: 12958 SQLSTATE: HY000 (ER_IB_MSG_1133)

  Message: Small buffer pool size (%luM), the flst_validate() debug function can cause a deadlock if the buffer pool fills up.

  ER_IB_MSG_1133 was added in 8.0.11.

- Error: 12959 SQLSTATE: HY000 (ER_IB_MSG_1134)

  Message: Could not open or create the system tablespace. If you tried to add new data files to the system tablespace, and it failed here, you should now edit innodb_data_file_path in my.cnf back to what it was, and remove the new ibdata files InnoDB created in this failed attempt. InnoDB only wrote those files full of zeros, but did not yet use them in any way. But be careful: do not remove old data files which contain your precious data!

  ER_IB_MSG_1134 was added in 8.0.11.

- Error: 12960 SQLSTATE: HY000 (ER_IB_MSG_1135)

  Message: Cannot create log files because data files are corrupt or the database was not shut down cleanly after creating the data files.

  ER_IB_MSG_1135 was added in 8.0.11.

- Error: 12961 SQLSTATE: HY000 (ER_IB_MSG_1136)

  Message: Only one log file found

  ER_IB_MSG_1136 was added in 8.0.11.

- Error: 12962 SQLSTATE: HY000 (ER_IB_MSG_1137)

  Message: Log file %s size %llu is not a multiple of innodb_page_size

  ER_IB_MSG_1137 was added in 8.0.11.

- Error: 12963 SQLSTATE: HY000 (ER_IB_MSG_1138)

  Message: Log file %s is of different size %llu bytes than other log files %llu bytes!

  ER_IB_MSG_1138 was added in 8.0.11.

- Error: 12964 SQLSTATE: HY000 (ER_IB_MSG_1139)

  Message: Use --innodb-directories to find the tablespace files. If that fails then use --innodb-force-recovery=1 to ignore this and to permanently lose all changes to the missing tablespace(s)

  ER_IB_MSG_1139 was added in 8.0.11.

- Error: 12965 SQLSTATE: HY000 (ER_IB_MSG_1140)

  Message: The log file may have been corrupt and it is possible that the log scan or parsing did not proceed far enough in recovery. Please run CHECK TABLE on your InnoDB tables to check that they are ok! It may be safest to recover your InnoDB database from a backup!

  ER_IB_MSG_1140 was added in 8.0.11.

- Error: 12966 SQLSTATE: HY000 (ER_IB_MSG_1141)

  Message: Cannot resize log files in read-only mode.

ER_IB_MSG_1141 was added in 8.0.11.

- Error: 12967 SQLSTATE: HY000 (ER_IB_MSG_1142)

  Message: Cannot open DD tablespace.

  ER_IB_MSG_1142 was added in 8.0.11.

- Error: 12968 SQLSTATE: HY000 (ER_IB_MSG_1143)

  Message: Starting to delete and rewrite log files.

  ER_IB_MSG_1143 was added in 8.0.11.

- Error: 12969 SQLSTATE: HY000 (ER_IB_MSG_1144)

  Message: Undo from 5.7 found. It will be purged

  ER_IB_MSG_1144 was added in 8.0.11.

- Error: 12970 SQLSTATE: HY000 (ER_IB_MSG_1145)

  Message: %s

  ER_IB_MSG_1145 was added in 8.0.11.

- Error: 12971 SQLSTATE: HY000 (ER_IB_MSG_1146)

  Message: %s

  ER_IB_MSG_1146 was added in 8.0.11.

- Error: 12972 SQLSTATE: HY000 (ER_IB_MSG_1147)

  Message: Tablespace size stored in header is %lu pages, but the sum of data file sizes is %lu pages

  ER_IB_MSG_1147 was added in 8.0.11.

- Error: 12973 SQLSTATE: HY000 (ER_IB_MSG_1148)

  Message: Cannot start InnoDB. The tail of the system tablespace is missing. Have you edited innodb_data_file_path in my.cnf in an inappropriate way, removing ibdata files from there? You can set innodb_force_recovery=1 in my.cnf to force a startup if you are trying to recover a badly corrupt database.

  ER_IB_MSG_1148 was added in 8.0.11.

- Error: 12974 SQLSTATE: HY000 (ER_IB_MSG_1149)

  Message: Tablespace size stored in header is %lu pages, but the sum of data file sizes is only %lu pages

  ER_IB_MSG_1149 was added in 8.0.11.

- Error: 12975 SQLSTATE: HY000 (ER_IB_MSG_1150)

  Message: Cannot start InnoDB. The tail of the system tablespace is missing. Have you edited innodb_data_file_path in my.cnf in an InnoDB: inappropriate way, removing ibdata files from there? You can set innodb_force_recovery=1 in my.cnf to force InnoDB: a startup if you are trying to recover a badly corrupt database.

  ER_IB_MSG_1150 was added in 8.0.11.

- Error: 12976 SQLSTATE: HY000 (ER_IB_MSG_1151)

  Message: %s started; log sequence number %llu

  ER_IB_MSG_1151 was added in 8.0.11.

  ER_IB_MSG_1270 was added in 8.0.11.

- Error: 13096 SQLSTATE: HY000 (ER_RPL_SLAVE_SQL_THREAD_STOP_CMD_EXEC_TIMEOUT)

  Message: STOP SLAVE command execution is incomplete: Slave SQL thread got the stop signal, thread is busy, SQL thread will stop once the current task is complete.

ER_RPL_SLAVE_SQL_THREAD_STOP_CMD_EXEC_TIMEOUT was added in 8.0.11.

- Error: 13097 SQLSTATE: HY000 (ER_RPL_SLAVE_IO_THREAD_STOP_CMD_EXEC_TIMEOUT)

  Message: STOP SLAVE command execution is incomplete: Slave IO thread got the stop signal, thread is busy, IO thread will stop once the current task is complete.

  ER_RPL_SLAVE_IO_THREAD_STOP_CMD_EXEC_TIMEOUT was added in 8.0.11.

- Error: 13098 SQLSTATE: HY000 (ER_RPL_GTID_UNSAFE_STMT_ON_NON_TRANS_TABLE)

  Message: Statement violates GTID consistency: Updates to non-transactional tables can only be done in either autocommitted statements or single-statement transactions, and never in the same statement as updates to transactional tables.

  ER_RPL_GTID_UNSAFE_STMT_ON_NON_TRANS_TABLE was added in 8.0.11.

- Error: 13099 SQLSTATE: HY000 (ER_RPL_GTID_UNSAFE_STMT_CREATE_SELECT)

  Message: Statement violates GTID consistency: CREATE TABLE ... SELECT.

  ER_RPL_GTID_UNSAFE_STMT_CREATE_SELECT was added in 8.0.11.

- Error: 13100 SQLSTATE: HY000 (ER_RPL_GTID_UNSAFE_STMT_ON_TEMPORARY_TABLE)

  Message: Statement violates GTID consistency: CREATE TEMPORARY TABLE and DROP TEMPORARY TABLE can only be executed outside transactional context. These statements are also not allowed in a function or trigger because functions and triggers are also considered to be multi-statement transactions.

  ER_RPL_GTID_UNSAFE_STMT_ON_TEMPORARY_TABLE was added in 8.0.11.

- Error: 13101 SQLSTATE: HY000 (ER_BINLOG_ROW_VALUE_OPTION_IGNORED)

  Message: When %s, the option binlog_row_value_options=%s will be ignored and updates will be written in full format to binary log.

  ER_BINLOG_ROW_VALUE_OPTION_IGNORED was added in 8.0.11.

- Error: 13102 SQLSTATE: HY000 (ER_BINLOG_USE_V1_ROW_EVENTS_IGNORED)

  Message: When %s, the option log_bin_use_v1_row_events=1 will be ignored and row events will be written in new format to binary log.

  ER_BINLOG_USE_V1_ROW_EVENTS_IGNORED was added in 8.0.11.

- Error: 13103 SQLSTATE: HY000 (ER_BINLOG_ROW_VALUE_OPTION_USED_ONLY_FOR_AFTER_IMAGES)

  Message: When %s, the option binlog_row_value_options=%s will be used only for the after-image. Full values will be written in the before-image, so the saving in disk space due to binlog_row_value_options is limited to less than 50%%.

  ER_BINLOG_ROW_VALUE_OPTION_USED_ONLY_FOR_AFTER_IMAGES was added in 8.0.11.

- Error: 13104 SQLSTATE: HY000 (ER_CONNECTION_ABORTED)

  Message: Aborted connection %u to db: '%s' user: '%s' host: '%s' (%s).

  ER_CONNECTION_ABORTED was added in 8.0.11.

- Error: 13105 SQLSTATE: HY000 (ER_NORMAL_SERVER_SHUTDOWN)

Message: %s: Normal shutdown.

ER_NORMAL_SERVER_SHUTDOWN was added in 8.0.11.

- Error: 13106 SQLSTATE: HY000 (ER_KEYRING_MIGRATE_FAILED)

  Message: Can not perform keyring migration : %s.

  ER_KEYRING_MIGRATE_FAILED was added in 8.0.11.

- Error: 13107 SQLSTATE: HY000 (ER_GRP_RPL_LOWER_CASE_TABLE_NAMES_DIFF_FROM_GRP)

  Message: The member is configured with a lower_case_table_names option value '%u' different from the group '%u'. The member will now exit the group. If there is existing data on member, it may be incompatible with group if it was created with a lower_case_table_names value different from the group.

  ER_GRP_RPL_LOWER_CASE_TABLE_NAMES_DIFF_FROM_GRP was added in 8.0.11.

- Error: 13108 SQLSTATE: HY000 (ER_OOM_SAVE_GTIDS)

  Message: An out-of-memory error occurred while saving the set of GTIDs from the last binary log into the mysql.gtid_executed table

  ER_OOM_SAVE_GTIDS was added in 8.0.11.

- Error: 13109 SQLSTATE: HY000 (ER_LCTN_NOT_FOUND)

  Message: The lower_case_table_names setting for the data dictionary was not found. Starting the server using lower_case_table_names = '%u'.

  ER_LCTN_NOT_FOUND was added in 8.0.11.

- Error: 13110 SQLSTATE: HY000 (ER_REGEXP_INVALID_CAPTURE_GROUP_NAME)

  Message: A capture group has an invalid name.

  ER_REGEXP_INVALID_CAPTURE_GROUP_NAME was added in 8.0.11.

- Error: 13111 SQLSTATE: HY000 (ER_COMPONENT_FILTER_WRONG_VALUE)

  Message: Variable '%s' can't be set to the value of '%s'

  ER_COMPONENT_FILTER_WRONG_VALUE was added in 8.0.11.

- Error: 13112 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_STOP_SERVICES)

  Message: Stopping services failed with error "%s"

  ER_XPLUGIN_FAILED_TO_STOP_SERVICES was added in 8.0.11.

- Error: 13113 SQLSTATE: HY000 (ER_INCONSISTENT_ERROR)

  Message: Query caused different errors on master and slave. Error on master: message (format)='%s' error code=%d; Error on slave:actual message='%s', error code=%d. Default database:'%s'. Query:'%s'

- Error: 13114 SQLSTATE: HY000 (ER_SERVER_MASTER_FATAL_ERROR_READING_BINLOG)

  Message: Got fatal error %d from master when reading data from binary log: '%s'

  ER_SERVER_MASTER_FATAL_ERROR_READING_BINLOG was added in 8.0.11.

- Error: 13115 SQLSTATE: HY000 (ER_NETWORK_READ_EVENT_CHECKSUM_FAILURE)

  Message: Replication event checksum verification failed while reading from network.
- Error: 13116 SQLSTATE: HY000 (ER_SLAVE_CREATE_EVENT_FAILURE)

  Message: Failed to create %s
- Error: 13117 SQLSTATE: HY000 (ER_SLAVE_FATAL_ERROR)

  Message: Fatal error: %s
- Error: 13118 SQLSTATE: HY000 (ER_SLAVE_HEARTBEAT_FAILURE)

  Message: Unexpected master's heartbeat data: %s
- Error: 13119 SQLSTATE: HY000 (ER_SLAVE_INCIDENT)

  Message: The incident %s occurred on the master. Message: %s
- Error: 13120 SQLSTATE: HY000 (ER_SLAVE_MASTER_COM_FAILURE)

  Message: Master command %s failed: %s
- Error: 13121 SQLSTATE: HY000 (ER_SLAVE_RELAY_LOG_READ_FAILURE)

  Message: Relay log read failure: %s
- Error: 13122 SQLSTATE: HY000 (ER_SLAVE_RELAY_LOG_WRITE_FAILURE)

  Message: Relay log write failure: %s
- Error: 13123 SQLSTATE: HY000 (ER_SERVER_SLAVE_MI_INIT_REPOSITORY)

  Message: Slave failed to initialize master info structure from the repository

  ER_SERVER_SLAVE_MI_INIT_REPOSITORY was added in 8.0.11.
- Error: 13124 SQLSTATE: HY000 (ER_SERVER_SLAVE_RLI_INIT_REPOSITORY)

  Message: Slave failed to initialize relay log info structure from the repository

  ER_SERVER_SLAVE_RLI_INIT_REPOSITORY was added in 8.0.11.
- Error: 13125 SQLSTATE: HY000 (ER_SERVER_NET_PACKET_TOO_LARGE)

  Message: Got a packet bigger than 'max_allowed_packet' bytes

  ER_SERVER_NET_PACKET_TOO_LARGE was added in 8.0.11.
- Error: 13126 SQLSTATE: HY000 (ER_SERVER_NO_SYSTEM_TABLE_ACCESS)

  Message: Access to %s '%s.%s' is rejected.

  ER_SERVER_NO_SYSTEM_TABLE_ACCESS was added in 8.0.11.
- Error: 13127 SQLSTATE: HY000 (ER_SERVER_UNKNOWN_ERROR)

  Message: Unknown error

  ER_SERVER_UNKNOWN_ERROR was added in 8.0.11.
- Error: 13128 SQLSTATE: HY000 (ER_SERVER_UNKNOWN_SYSTEM_VARIABLE)

  Message: Unknown system variable '%s'

ER_SERVER_UNKNOWN_SYSTEM_VARIABLE was added in 8.0.11.

- Error: 13129 SQLSTATE: HY000 (ER_SERVER_NO_SESSION_TO_SEND_TO)

  Message: A message intended for a client cannot be sent there as no client-session is attached. Therefore, we're sending the information to the error-log instead: MY-%06d - %s

  ER_SERVER_NO_SESSION_TO_SEND_TO was added in 8.0.11.

- Error: 13130 SQLSTATE: 08S01 (ER_SERVER_NEW_ABORTING_CONNECTION)

  Message: Aborted connection %u to db: '%s' user: '%s' host: '%s' (%s; diagnostics area: MY-%06d - %s)

  ER_SERVER_NEW_ABORTING_CONNECTION was added in 8.0.11.

- Error: 13131 SQLSTATE: HY000 (ER_SERVER_OUT_OF_SORTMEMORY)

  Message: Out of sort memory, consider increasing server sort buffer size!

  ER_SERVER_OUT_OF_SORTMEMORY was added in 8.0.11.

- Error: 13132 SQLSTATE: HY000 (ER_SERVER_RECORD_FILE_FULL)

  Message: The table '%s' is full!

  ER_SERVER_RECORD_FILE_FULL was added in 8.0.11.

- Error: 13133 SQLSTATE: HY000 (ER_SERVER_DISK_FULL_NOWAIT)

  Message: Create table/tablespace '%s' failed, as disk is full.

  ER_SERVER_DISK_FULL_NOWAIT was added in 8.0.11.

- Error: 13134 SQLSTATE: HY000 (ER_SERVER_HANDLER_ERROR)

  Message: Handler reported error %d - %s

  ER_SERVER_HANDLER_ERROR was added in 8.0.11.

- Error: 13135 SQLSTATE: HY000 (ER_SERVER_NOT_FORM_FILE)

  Message: Incorrect information in file: '%s'

  ER_SERVER_NOT_FORM_FILE was added in 8.0.11.

- Error: 13136 SQLSTATE: HY000 (ER_SERVER_CANT_OPEN_FILE)

  Message: Can't open file: '%s' (OS errno: %d - %s)

  ER_SERVER_CANT_OPEN_FILE was added in 8.0.11.

- Error: 13137 SQLSTATE: HY000 (ER_SERVER_FILE_NOT_FOUND)

  Message: Can't find file: '%s' (OS errno: %d - %s)

  ER_SERVER_FILE_NOT_FOUND was added in 8.0.11.

- Error: 13138 SQLSTATE: HY000 (ER_SERVER_FILE_USED)

  Message: '%s' is locked against change (OS errno: %d - %s)

  ER_SERVER_FILE_USED was added in 8.0.11.

- Error: 13139 SQLSTATE: HY000 (ER_SERVER_CANNOT_LOAD_FROM_TABLE_V2)

  Message: Cannot load from %s.%s. The table is probably corrupted!

  ER_SERVER_CANNOT_LOAD_FROM_TABLE_V2 was added in 8.0.11.

- Error: 13140 SQLSTATE: HY000 (ER_ERROR_INFO_FROM_DA)

  Message: Error in diagnostics area: MY-%06d - %s

  ER_ERROR_INFO_FROM_DA was added in 8.0.11.

- Error: 13141 SQLSTATE: HY000 (ER_SERVER_TABLE_CHECK_FAILED)

  Message: Incorrect definition of table %s.%s: expected column '%s' at position %d, found '%s'.

  ER_SERVER_TABLE_CHECK_FAILED was added in 8.0.11.

- Error: 13142 SQLSTATE: HY000 (ER_SERVER_COL_COUNT_DOESNT_MATCH_PLEASE_UPDATE_V2)

  Message: Column count of %s.%s is wrong. Expected %d, found %d. Created with MySQL %d, now running %d. Please use mysql_upgrade to fix this error.

  ER_SERVER_COL_COUNT_DOESNT_MATCH_PLEASE_UPDATE_V2 was added in 8.0.11.

- Error: 13143 SQLSTATE: HY000 (ER_SERVER_COL_COUNT_DOESNT_MATCH_CORRUPTED_V2)

  Message: Column count of %s.%s is wrong. Expected %d, found %d. The table is probably corrupted

  ER_SERVER_COL_COUNT_DOESNT_MATCH_CORRUPTED_V2 was added in 8.0.11.

- Error: 13144 SQLSTATE: HY000 (ER_SERVER_ACL_TABLE_ERROR)

  Message:

  ER_SERVER_ACL_TABLE_ERROR was added in 8.0.11.

- Error: 13145 SQLSTATE: HY000 (ER_SERVER_SLAVE_INIT_QUERY_FAILED)

  Message: Slave SQL thread aborted. Can't execute init_slave query, MY-%06d - '%s'

  ER_SERVER_SLAVE_INIT_QUERY_FAILED was added in 8.0.11.

- Error: 13146 SQLSTATE: HY000 (ER_SERVER_SLAVE_CONVERSION_FAILED)

  Message: Column %d of table '%s.%s' cannot be converted from type '%s' to type '%s'

  ER_SERVER_SLAVE_CONVERSION_FAILED was added in 8.0.11.

- Error: 13147 SQLSTATE: HY000 (ER_SERVER_SLAVE_IGNORED_TABLE)

  Message: Slave SQL thread ignored the query because of replicate-*-table rules

  ER_SERVER_SLAVE_IGNORED_TABLE was added in 8.0.11.

- Error: 13148 SQLSTATE: HY000 (ER_CANT_REPLICATE_ANONYMOUS_WITH_AUTO_POSITION)

  Message: Cannot replicate anonymous transaction when AUTO_POSITION = 1, at file %s, position %lld.

- Error: 13149 SQLSTATE: HY000 (ER_CANT_REPLICATE_ANONYMOUS_WITH_GTID_MODE_ON)

Message: Cannot replicate anonymous transaction when @@GLOBAL.GTID_MODE = ON, at file %s, position %lld.

- Error: 13150 SQLSTATE: HY000 (ER_CANT_REPLICATE_GTID_WITH_GTID_MODE_OFF)

  Message: Cannot replicate GTID-transaction when @@GLOBAL.GTID_MODE = OFF, at file %s, position %lld.

- Error: 13151 SQLSTATE: HY000 (ER_SERVER_TEST_MESSAGE)

  Message: Simulated error

  ER_SERVER_TEST_MESSAGE was added in 8.0.11.

- Error: 13152 SQLSTATE: HY000 (ER_AUDIT_LOG_JSON_FILTER_PARSING_ERROR)

  Message: %s

  ER_AUDIT_LOG_JSON_FILTER_PARSING_ERROR was added in 8.0.11.

- Error: 13153 SQLSTATE: HY000 (ER_AUDIT_LOG_JSON_FILTERING_NOT_ENABLED)

  Message: Audit Log filtering has not been installed.

  ER_AUDIT_LOG_JSON_FILTERING_NOT_ENABLED was added in 8.0.11.

- Error: 13154 SQLSTATE: HY000 (ER_PLUGIN_FAILED_TO_OPEN_TABLES)

  Message: Failed to open the %s filter tables.

  ER_PLUGIN_FAILED_TO_OPEN_TABLES was added in 8.0.11.

- Error: 13155 SQLSTATE: HY000 (ER_PLUGIN_FAILED_TO_OPEN_TABLE)

  Message: Failed to open '%s.%s' %s table.

  ER_PLUGIN_FAILED_TO_OPEN_TABLE was added in 8.0.11.

- Error: 13156 SQLSTATE: HY000 (ER_AUDIT_LOG_JSON_FILTER_NAME_CANNOT_BE_EMPTY)

  Message: Filter name cannot be empty.

  ER_AUDIT_LOG_JSON_FILTER_NAME_CANNOT_BE_EMPTY was added in 8.0.11.

- Error: 13157 SQLSTATE: HY000 (ER_AUDIT_LOG_USER_NAME_INVALID_CHARACTER)

  Message: Invalid character in the user name.

  ER_AUDIT_LOG_USER_NAME_INVALID_CHARACTER was added in 8.0.11.

- Error: 13158 SQLSTATE: HY000 (ER_AUDIT_LOG_UDF_INSUFFICIENT_PRIVILEGE)

  Message: Request ignored for '%s'@'%s'. SUPER or AUDIT_ADMIN needed to perform operation

  ER_AUDIT_LOG_UDF_INSUFFICIENT_PRIVILEGE was added in 8.0.11.

- Error: 13159 SQLSTATE: HY000 (ER_AUDIT_LOG_NO_KEYRING_PLUGIN_INSTALLED)

  Message: No keyring plugin installed.

  ER_AUDIT_LOG_NO_KEYRING_PLUGIN_INSTALLED was added in 8.0.11.

- Error: 13160 SQLSTATE: HY000 (ER_AUDIT_LOG_HOST_NAME_INVALID_CHARACTER)

Message: Invalid character in the host name.

ER_AUDIT_LOG_HOST_NAME_INVALID_CHARACTER was added in 8.0.11.

- Error: 13161 SQLSTATE: HY000 (ER_AUDIT_LOG_ENCRYPTION_PASSWORD_HAS_NOT_BEEN_SET)

  Message: Audit log encryption password has not been set; it will be generated automatically. Use audit_log_encryption_password_get to obtain the password or audit_log_encryption_password_set to set a new one.

  ER_AUDIT_LOG_ENCRYPTION_PASSWORD_HAS_NOT_BEEN_SET was added in 8.0.11.

- Error: 13162 SQLSTATE: HY000 (ER_AUDIT_LOG_COULD_NOT_CREATE_AES_KEY)

  Message: Could not create AES key. OpenSSL's EVP_BytesToKey function failed.

  ER_AUDIT_LOG_COULD_NOT_CREATE_AES_KEY was added in 8.0.11.

- Error: 13163 SQLSTATE: HY000 (ER_AUDIT_LOG_ENCRYPTION_PASSWORD_CANNOT_BE_FETCHED)

  Message: Audit log encryption password cannot be fetched from the keyring. Password used so far is used for encryption.

  ER_AUDIT_LOG_ENCRYPTION_PASSWORD_CANNOT_BE_FETCHED was added in 8.0.11.

- Error: 13164 SQLSTATE: HY000 (ER_COULD_NOT_REINITIALIZE_AUDIT_LOG_FILTERS)

  Message: Could not reinitialize audit log filters.

  ER_COULD_NOT_REINITIALIZE_AUDIT_LOG_FILTERS was added in 8.0.11.

- Error: 13165 SQLSTATE: HY000 (ER_AUDIT_LOG_JSON_USER_NAME_CANNOT_BE_EMPTY)

  Message: User cannot be empty.

  ER_AUDIT_LOG_JSON_USER_NAME_CANNOT_BE_EMPTY was added in 8.0.11.

- Error: 13166 SQLSTATE: HY000 (ER_AUDIT_LOG_USER_FIRST_CHARACTER_MUST_BE_ALPHANUMERIC)

  Message: First character of the user name must be alphanumeric.

  ER_AUDIT_LOG_USER_FIRST_CHARACTER_MUST_BE_ALPHANUMERIC was added in 8.0.11.

- Error: 13167 SQLSTATE: HY000 (ER_AUDIT_LOG_JSON_FILTER_DOES_NOT_EXIST)

  Message: Specified filter has not been found.

  ER_AUDIT_LOG_JSON_FILTER_DOES_NOT_EXIST was added in 8.0.11.

- Error: 13168 SQLSTATE: HY000 (ER_IB_MSG_1271)

  Message: Cannot upgrade server earlier than 5.7 to 8.0

  ER_IB_MSG_1271 was added in 8.0.12.

- Error: 13169 SQLSTATE: HY000 (ER_STARTING_INIT)

  Message: %s (mysqld %s) initializing of server in progress as process %lu

  ER_STARTING_INIT was added in 8.0.12.

- Error: 13170 SQLSTATE: HY000 (ER_ENDING_INIT)

  Message: %s (mysqld %s) initializing of server has completed

  ER_ENDING_INIT was added in 8.0.12.

- Error: 13171 SQLSTATE: HY000 (ER_IB_MSG_1272)

  Message: Cannot boot server version %lu on data directory built by version %lu. Downgrade is not supported

  ER_IB_MSG_1272 was added in 8.0.12.

- Error: 13172 SQLSTATE: HY000 (ER_SERVER_SHUTDOWN_INFO)

  Message: Received SHUTDOWN from user %s. Shutting down mysqld (Version: %s).

  ER_SERVER_SHUTDOWN_INFO was added in 8.0.12.

- Error: 13173 SQLSTATE: HY000 (ER_GRP_RPL_PLUGIN_ABORT)

  Message: The plugin encountered a critical error and will abort: %s

  ER_GRP_RPL_PLUGIN_ABORT was added in 8.0.12.

- Error: 13174 SQLSTATE: HY000 (ER_REGEXP_INVALID_FLAG)

  Message: Invalid match mode flag in regular expression.

  ER_REGEXP_INVALID_FLAG was added in 8.0.12.

- Error: 13175 SQLSTATE: HY000 (ER_XA_REPLICATION_FILTERS)

  Message: The use of replication filters with XA transactions is not supported, and can lead to an undefined state in the replication slave.

  ER_XA_REPLICATION_FILTERS was added in 8.0.12.

- Error: 13176 SQLSTATE: HY000 (ER_UPDATE_GTID_PURGED_WITH_GR)

  Message: Cannot update GTID_PURGED with the Group Replication plugin running

  ER_UPDATE_GTID_PURGED_WITH_GR was added in 8.0.12.

- Error: 13177 SQLSTATE: HY000 (ER_AUDIT_LOG_TABLE_DEFINITION_NOT_UPDATED)

  Message: '%s.%s' table definition has not been upgraded; to upgrade it, run mysql_upgrade command.

  ER_AUDIT_LOG_TABLE_DEFINITION_NOT_UPDATED was added in 8.0.12.

- Error: 13178 SQLSTATE: HY000 (ER_DD_INITIALIZE_SQL_ERROR)

  Message: Execution of server-side SQL statement '%s' failed with error code = %d, error message = '%s'.

  ER_DD_INITIALIZE_SQL_ERROR was added in 8.0.12.

- Error: 13179 SQLSTATE: HY000 (ER_NO_PATH_FOR_SHARED_LIBRARY)

  Message: No paths allowed for shared library.

  ER_NO_PATH_FOR_SHARED_LIBRARY was added in 8.0.13.

- Error: 13180 SQLSTATE: HY000 (ER_UDF_ALREADY_EXISTS)

  Message: Function '%s' already exists.

  ER_UDF_ALREADY_EXISTS was added in 8.0.13.

- Error: 13181 SQLSTATE: HY000 (ER_SET_EVENT_FAILED)

  Message: Got Error: %ld from SetEvent.

  ER_SET_EVENT_FAILED was added in 8.0.13.

- Error: 13182 SQLSTATE: HY000 (ER_FAILED_TO_ALLOCATE_SSL_BIO)

  Message: Error allocating SSL BIO.

  ER_FAILED_TO_ALLOCATE_SSL_BIO was added in 8.0.13.

- Error: 13183 SQLSTATE: HY000 (ER_IB_MSG_1273)

  Message: %s

  ER_IB_MSG_1273 was added in 8.0.13.

- Error: 13184 SQLSTATE: HY000 (ER_PID_FILEPATH_LOCATIONS_INACCESSIBLE)

  Message: One or several locations were inaccessible while checking PID filepath.

  ER_PID_FILEPATH_LOCATIONS_INACCESSIBLE was added in 8.0.13.

- Error: 13185 SQLSTATE: HY000 (ER_UNKNOWN_VARIABLE_IN_PERSISTED_CONFIG_FILE)

  Message: Currently unknown variable '%s' was read from the persisted config file.

  ER_UNKNOWN_VARIABLE_IN_PERSISTED_CONFIG_FILE was added in 8.0.13.

- Error: 13186 SQLSTATE: HY000 (ER_FAILED_TO_HANDLE_DEFAULTS_FILE)

  Message: Fatal error in defaults handling. Program aborted!

  ER_FAILED_TO_HANDLE_DEFAULTS_FILE was added in 8.0.13.

- Error: 13187 SQLSTATE: HY000 (ER_DUPLICATE_SYS_VAR)

  Message: Duplicate variable name '%s'.

  ER_DUPLICATE_SYS_VAR was added in 8.0.13.

- Error: 13188 SQLSTATE: HY000 (ER_FAILED_TO_INIT_SYS_VAR)

  Message: Failed to initialize system variables.

  ER_FAILED_TO_INIT_SYS_VAR was added in 8.0.13.

- Error: 13189 SQLSTATE: HY000 (ER_SYS_VAR_NOT_FOUND)

  Message: Variable name '%s' not found.

  ER_SYS_VAR_NOT_FOUND was added in 8.0.13.

- Error: 13190 SQLSTATE: HY000 (ER_IB_MSG_1274)

  Message: %s

  ER_IB_MSG_1274 was added in 8.0.13.

- Error: 13191 SQLSTATE: HY000 (ER_IB_MSG_1275)

  Message: %s

  ER_IB_MSG_1275 was added in 8.0.13.
- Error: 13192 SQLSTATE: HY000 (ER_TARGET_TS_UNENCRYPTED)

  Message: Source tablespace is encrypted but target tablespace is not.

  ER_TARGET_TS_UNENCRYPTED was added in 8.0.13.
- Error: 13193 SQLSTATE: HY000 (ER_IB_MSG_1276)

  Message: %s

  ER_IB_MSG_1276 was added in 8.0.13.
- Error: 13194 SQLSTATE: HY000 (ER_IB_MSG_1277)

  Message: %s

  ER_IB_MSG_1277 was added in 8.0.13.
- Error: 13195 SQLSTATE: HY000 (ER_IB_MSG_1278)

  Message: %s

  ER_IB_MSG_1278 was added in 8.0.13.
- Error: 13196 SQLSTATE: HY000 (ER_IB_MSG_1279)

  Message: %s

  ER_IB_MSG_1279 was added in 8.0.13.
- Error: 13197 SQLSTATE: HY000 (ER_IB_MSG_1280)

  Message: %s

  ER_IB_MSG_1280 was added in 8.0.13.
- Error: 13198 SQLSTATE: HY000 (ER_IB_MSG_1281)

  Message: %s

  ER_IB_MSG_1281 was added in 8.0.13.
- Error: 13199 SQLSTATE: HY000 (ER_IB_MSG_1282)

  Message: %s

  ER_IB_MSG_1282 was added in 8.0.13.
- Error: 13200 SQLSTATE: HY000 (ER_IB_MSG_1283)

  Message: %s

  ER_IB_MSG_1283 was added in 8.0.13.
- Error: 13201 SQLSTATE: HY000 (ER_IB_MSG_1284)

  Message: %s

  ER_IB_MSG_1284 was added in 8.0.13.

- Error: 13202 SQLSTATE: HY000 (ER_CANT_SET_ERROR_SUPPRESSION_LIST_FROM_COMMAND_LINE)

  Message: %s: Could not add suppression rule for code "%s". Rule-set may be full, or code may not correspond to an error-log message.

  ER_CANT_SET_ERROR_SUPPRESSION_LIST_FROM_COMMAND_LINE was added in 8.0.13.

- Error: 13203 SQLSTATE: HY000 (ER_INVALID_VALUE_OF_BIND_ADDRESSES)

  Message: Invalid value for command line option bind-addresses: '%s'

  ER_INVALID_VALUE_OF_BIND_ADDRESSES was added in 8.0.13.

- Error: 13204 SQLSTATE: HY000 (ER_RELAY_LOG_SPACE_LIMIT_DISABLED)

  Message: Ignoring the @@global.relay_log_space_limit option because @@global.relay_log_purge is disabled.

  ER_RELAY_LOG_SPACE_LIMIT_DISABLED was added in 8.0.13.

- Error: 13205 SQLSTATE: HY000 (ER_GRP_RPL_ERROR_GTID_SET_EXTRACTION)

  Message: Error when extracting GTID execution information: %s

  ER_GRP_RPL_ERROR_GTID_SET_EXTRACTION was added in 8.0.13.

- Error: 13206 SQLSTATE: HY000 (ER_GRP_RPL_MISSING_GRP_RPL_ACTION_COORDINATOR)

  Message: Message received without a proper group coordinator module.

  ER_GRP_RPL_MISSING_GRP_RPL_ACTION_COORDINATOR was added in 8.0.13.

- Error: 13207 SQLSTATE: HY000 (ER_GRP_RPL_JOIN_WHEN_GROUP_ACTION_RUNNING)

  Message: A member cannot join the group while a group configuration operation is running.

  ER_GRP_RPL_JOIN_WHEN_GROUP_ACTION_RUNNING was added in 8.0.13.

- Error: 13208 SQLSTATE: HY000 (ER_GRP_RPL_JOINER_EXIT_WHEN_GROUP_ACTION_RUNNING)

  Message: A member is joining the group while a group configuration operation is occurring. The member will now leave the group

  ER_GRP_RPL_JOINER_EXIT_WHEN_GROUP_ACTION_RUNNING was added in 8.0.13.

- Error: 13209 SQLSTATE: HY000 (ER_GRP_RPL_CHANNEL_THREAD_WHEN_GROUP_ACTION_RUNNING)

  Message: Can't start slave %s when group replication is running a group configuration operation.

  ER_GRP_RPL_CHANNEL_THREAD_WHEN_GROUP_ACTION_RUNNING was added in 8.0.13.

- Error: 13210 SQLSTATE: HY000 (ER_GRP_RPL_APPOINTED_PRIMARY_NOT_PRESENT)

  Message: A primary election was invoked but the requested primary member is not in the group. Request ignored.

  ER_GRP_RPL_APPOINTED_PRIMARY_NOT_PRESENT was added in 8.0.13.

- Error: 13211 SQLSTATE: HY000 (ER_GRP_RPL_ERROR_ON_MESSAGE_SENDING)

  Message: Error while sending message. Context: %s

ER_GRP_RPL_ERROR_ON_MESSAGE_SENDING was added in 8.0.13.

- Error: 13212 SQLSTATE: HY000 (ER_GRP_RPL_CONFIGURATION_ACTION_ERROR)

  Message: Error while executing a group configuration operation: %s

  ER_GRP_RPL_CONFIGURATION_ACTION_ERROR was added in 8.0.13.

- Error: 13213 SQLSTATE: HY000 (ER_GRP_RPL_CONFIGURATION_ACTION_LOCAL_TERMINATION)

  Message: Configuration operation '%s' terminated. %s

  ER_GRP_RPL_CONFIGURATION_ACTION_LOCAL_TERMINATION was added in 8.0.13.

- Error: 13214 SQLSTATE: HY000 (ER_GRP_RPL_CONFIGURATION_ACTION_START)

  Message: Starting group operation local execution: %s

  ER_GRP_RPL_CONFIGURATION_ACTION_START was added in 8.0.13.

- Error: 13215 SQLSTATE: HY000 (ER_GRP_RPL_CONFIGURATION_ACTION_END)

  Message: Termination of group operation local execution: %s

  ER_GRP_RPL_CONFIGURATION_ACTION_END was added in 8.0.13.

- Error: 13216 SQLSTATE: HY000 (ER_GRP_RPL_CONFIGURATION_ACTION_KILLED_ERROR)

  Message: A configuration change was killed in this member. The member will now leave the group as its configuration may have diverged.

  ER_GRP_RPL_CONFIGURATION_ACTION_KILLED_ERROR was added in 8.0.13.

- Error: 13217 SQLSTATE: HY000 (ER_GRP_RPL_PRIMARY_ELECTION_PROCESS_ERROR)

  Message: There was an issue on the primary election process: %s The member will now leave the group.

  ER_GRP_RPL_PRIMARY_ELECTION_PROCESS_ERROR was added in 8.0.13.

- Error: 13218 SQLSTATE: HY000 (ER_GRP_RPL_PRIMARY_ELECTION_STOP_ERROR)

  Message: There was an issue when stopping a previous election process: %s

  ER_GRP_RPL_PRIMARY_ELECTION_STOP_ERROR was added in 8.0.13.

- Error: 13219 SQLSTATE: HY000 (ER_GRP_RPL_NO_STAGE_SERVICE)

  Message: It was not possible to initialize stage logging for this task. The operation will still run without stage tracking.

  ER_GRP_RPL_NO_STAGE_SERVICE was added in 8.0.13.

- Error: 13220 SQLSTATE: HY000 (ER_GRP_RPL_UDF_REGISTER_ERROR)

  Message: Could not execute the installation of Group Replication UDF function: %s. Check if the function is already present, if so, try to remove it

  ER_GRP_RPL_UDF_REGISTER_ERROR was added in 8.0.13.

- Error: 13221 SQLSTATE: HY000 (ER_GRP_RPL_UDF_UNREGISTER_ERROR)

Message: Could not uninstall Group Replication UDF functions. Try to remove them manually if present.

`ER_GRP_RPL_UDF_UNREGISTER_ERROR` was added in 8.0.13.

- Error: `13222` SQLSTATE: `HY000` (`ER_GRP_RPL_UDF_REGISTER_SERVICE_ERROR`)

  Message: Could not execute the installation of Group Replication UDF functions. Check for other errors in the log and try to reinstall the plugin

  `ER_GRP_RPL_UDF_REGISTER_SERVICE_ERROR` was added in 8.0.13.

- Error: `13223` SQLSTATE: `HY000` (`ER_GRP_RPL_UDF_ERROR`)

  Message: The function '%s' failed. %s

  `ER_GRP_RPL_UDF_ERROR` was added in 8.0.13.

- Error: `13224` SQLSTATE: `HY000` (`ER_CURRENT_PASSWORD_NOT_REQUIRED`)

  Message: Do not specify the current password while changing it for other users.

  `ER_CURRENT_PASSWORD_NOT_REQUIRED` was added in 8.0.13.

- Error: `13225` SQLSTATE: `HY000` (`ER_INCORRECT_CURRENT_PASSWORD`)

  Message: Incorrect current password. Specify the correct password which has to be replaced.

  `ER_INCORRECT_CURRENT_PASSWORD` was added in 8.0.13.

- Error: `13226` SQLSTATE: `HY000` (`ER_MISSING_CURRENT_PASSWORD`)

  Message: Current password needs to be specified in the REPLACE clause in order to change it.

  `ER_MISSING_CURRENT_PASSWORD` was added in 8.0.13.

- Error: `13227` SQLSTATE: `HY000` (`ER_SERVER_WRONG_VALUE_FOR_VAR`)

  Message: Variable '%s' can't be set to the value of '%s'

  `ER_SERVER_WRONG_VALUE_FOR_VAR` was added in 8.0.13.

- Error: `13228` SQLSTATE: `HY000` (`ER_COULD_NOT_CREATE_WINDOWS_REGISTRY_KEY`)

  Message: %s was unable to create a new Windows registry key %s for %s; continuing to use the previous ident.

  `ER_COULD_NOT_CREATE_WINDOWS_REGISTRY_KEY` was added in 8.0.13.

B.4 Client Error Codes and Messages

Client error information comes from the following source files:

- The Error values and the symbols in parentheses correspond to definitions in the `include/errmsg.h` MySQL source file.
- The Message values correspond to the error messages that are listed in the `libmysql/errmsg.c` file. `%d` and `%s` represent numbers and strings, respectively, that are substituted into the messages when they are displayed.

Because updates are frequent, it is possible that those files will contain additional error information not listed here.

- Error: `2000` (`CR_UNKNOWN_ERROR`)

  Message: Unknown MySQL error
- Error: `2001` (`CR_SOCKET_CREATE_ERROR`)

  Message: Can't create UNIX socket (%d)
- Error: `2002` (`CR_CONNECTION_ERROR`)

  Message: Can't connect to local MySQL server through socket '%s' (%d)
- Error: `2003` (`CR_CONN_HOST_ERROR`)

  Message: Can't connect to MySQL server on '%s' (%d)
- Error: `2004` (`CR_IPSOCK_ERROR`)

  Message: Can't create TCP/IP socket (%d)
- Error: `2005` (`CR_UNKNOWN_HOST`)

  Message: Unknown MySQL server host '%s' (%d)
- Error: `2006` (`CR_SERVER_GONE_ERROR`)

  Message: MySQL server has gone away
- Error: `2007` (`CR_VERSION_ERROR`)

  Message: Protocol mismatch; server version = %d, client version = %d
- Error: `2008` (`CR_OUT_OF_MEMORY`)

  Message: MySQL client ran out of memory
- Error: `2009` (`CR_WRONG_HOST_INFO`)

  Message: Wrong host info
- Error: `2010` (`CR_LOCALHOST_CONNECTION`)

  Message: Localhost via UNIX socket
- Error: `2011` (`CR_TCP_CONNECTION`)

  Message: %s via TCP/IP
- Error: `2012` (`CR_SERVER_HANDSHAKE_ERR`)

  Message: Error in server handshake
- Error: `2013` (`CR_SERVER_LOST`)

  Message: Lost connection to MySQL server during query
- Error: `2014` (`CR_COMMANDS_OUT_OF_SYNC`)

  Message: Commands out of sync; you can't run this command now
- Error: `2015` (`CR_NAMEDPIPE_CONNECTION`)

  Message: Named pipe: %s
- Error: `2016` (`CR_NAMEDPIPEWAIT_ERROR`)

Message: Can't wait for named pipe to host: %s pipe: %s (%lu)

- Error: 2017 (CR_NAMEDPIPEOPEN_ERROR)

  Message: Can't open named pipe to host: %s pipe: %s (%lu)

- Error: 2018 (CR_NAMEDPIPESETSTATE_ERROR)

  Message: Can't set state of named pipe to host: %s pipe: %s (%lu)

- Error: 2019 (CR_CANT_READ_CHARSET)

  Message: Can't initialize character set %s (path: %s)

- Error: 2020 (CR_NET_PACKET_TOO_LARGE)

  Message: Got packet bigger than 'max_allowed_packet' bytes

- Error: 2021 (CR_EMBEDDED_CONNECTION)

  Message: Embedded server

- Error: 2022 (CR_PROBE_SLAVE_STATUS)

  Message: Error on SHOW SLAVE STATUS:

- Error: 2023 (CR_PROBE_SLAVE_HOSTS)

  Message: Error on SHOW SLAVE HOSTS:

- Error: 2024 (CR_PROBE_SLAVE_CONNECT)

  Message: Error connecting to slave:

- Error: 2025 (CR_PROBE_MASTER_CONNECT)

  Message: Error connecting to master:

- Error: 2026 (CR_SSL_CONNECTION_ERROR)

  Message: SSL connection error: %s

- Error: 2027 (CR_MALFORMED_PACKET)

  Message: Malformed packet

- Error: 2028 (CR_WRONG_LICENSE)

  Message: This client library is licensed only for use with MySQL servers having '%s' license

- Error: 2029 (CR_NULL_POINTER)

  Message: Invalid use of null pointer

- Error: 2030 (CR_NO_PREPARE_STMT)

  Message: Statement not prepared

- Error: 2031 (CR_PARAMS_NOT_BOUND)

  Message: No data supplied for parameters in prepared statement

- Error: 2032 (CR_DATA_TRUNCATED)

Message: Data truncated

- Error: 2033 (CR_NO_PARAMETERS_EXISTS)

  Message: No parameters exist in the statement

- Error: 2034 (CR_INVALID_PARAMETER_NO)

  Message: Invalid parameter number

  The column number for `mysql_stmt_fetch_column()` was invalid.

  The parameter number for `mysql_stmt_send_long_data()` was invalid.

  A key name was empty or the amount of connection attribute data for `mysql_options4()` exceeds the 64KB limit.

- Error: 2035 (CR_INVALID_BUFFER_USE)

  Message: Can't send long data for non-string/non-binary data types (parameter: %d)

- Error: 2036 (CR_UNSUPPORTED_PARAM_TYPE)

  Message: Using unsupported buffer type: %d (parameter: %d)

- Error: 2037 (CR_SHARED_MEMORY_CONNECTION)

  Message: Shared memory: %s

- Error: 2038 (CR_SHARED_MEMORY_CONNECT_REQUEST_ERROR)

  Message: Can't open shared memory; client could not create request event (%lu)

- Error: 2039 (CR_SHARED_MEMORY_CONNECT_ANSWER_ERROR)

  Message: Can't open shared memory; no answer event received from server (%lu)

- Error: 2040 (CR_SHARED_MEMORY_CONNECT_FILE_MAP_ERROR)

  Message: Can't open shared memory; server could not allocate file mapping (%lu)

- Error: 2041 (CR_SHARED_MEMORY_CONNECT_MAP_ERROR)

  Message: Can't open shared memory; server could not get pointer to file mapping (%lu)

- Error: 2042 (CR_SHARED_MEMORY_FILE_MAP_ERROR)

  Message: Can't open shared memory; client could not allocate file mapping (%lu)

- Error: 2043 (CR_SHARED_MEMORY_MAP_ERROR)

  Message: Can't open shared memory; client could not get pointer to file mapping (%lu)

- Error: 2044 (CR_SHARED_MEMORY_EVENT_ERROR)

  Message: Can't open shared memory; client could not create %s event (%lu)

- Error: 2045 (CR_SHARED_MEMORY_CONNECT_ABANDONED_ERROR)

  Message: Can't open shared memory; no answer from server (%lu)

- Error: 2046 (CR_SHARED_MEMORY_CONNECT_SET_ERROR)

  Message: Can't open shared memory; cannot send request event to server (%lu)

- Error: 2047 (CR_CONN_UNKNOW_PROTOCOL)

  Message: Wrong or unknown protocol

- Error: 2048 (CR_INVALID_CONN_HANDLE)

  Message: Invalid connection handle

- Error: 2049 (CR_UNUSED_1)

  Message: Connection using old (pre-4.1.1) authentication protocol refused (client option 'secure_auth' enabled)

- Error: 2050 (CR_FETCH_CANCELED)

  Message: Row retrieval was canceled by mysql_stmt_close() call

- Error: 2051 (CR_NO_DATA)

  Message: Attempt to read column without prior row fetch

- Error: 2052 (CR_NO_STMT_METADATA)

  Message: Prepared statement contains no metadata

- Error: 2053 (CR_NO_RESULT_SET)

  Message: Attempt to read a row while there is no result set associated with the statement

- Error: 2054 (CR_NOT_IMPLEMENTED)

  Message: This feature is not implemented yet

- Error: 2055 (CR_SERVER_LOST_EXTENDED)

  Message: Lost connection to MySQL server at '%s', system error: %d

- Error: 2056 (CR_STMT_CLOSED)

  Message: Statement closed indirectly because of a preceding %s() call

- Error: 2057 (CR_NEW_STMT_METADATA)

  Message: The number of columns in the result set differs from the number of bound buffers. You must reset the statement, rebind the result set columns, and execute the statement again

- Error: 2058 (CR_ALREADY_CONNECTED)

  Message: This handle is already connected. Use a separate handle for each connection.

- Error: 2059 (CR_AUTH_PLUGIN_CANNOT_LOAD)

  Message: Authentication plugin '%s' cannot be loaded: %s

- Error: 2060 (CR_DUPLICATE_CONNECTION_ATTR)

  Message: There is an attribute with the same name already

  A duplicate connection attribute name was specified for mysql_options4().

- Error: 2061 (CR_AUTH_PLUGIN_ERR)

  Message: Authentication plugin '%s' reported error: %s

- Error: 2062 (CR_INSECURE_API_ERR)

Message: Insecure API function call: '%s' Use instead: '%s'

An insecure function call was detected. Modify the application to use the suggested alternative function instead.

- Error: `2063` (`CR_FILE_NAME_TOO_LONG`)

  Message: File name is too long

  `CR_FILE_NAME_TOO_LONG` was added in 8.0.1.

- Error: `2064` (`CR_SSL_FIPS_MODE_ERR`)

  Message: Set FIPS mode ON/STRICT failed

  `CR_SSL_FIPS_MODE_ERR` was added in 8.0.11.

B.5 Problems and Common Errors

This section lists some common problems and error messages that you may encounter. It describes how to determine the causes of the problems and what to do to solve them.

B.5.1 How to Determine What Is Causing a Problem

When you run into a problem, the first thing you should do is to find out which program or piece of equipment is causing it:

- If you have one of the following symptoms, then it is probably a hardware problems (such as memory, motherboard, CPU, or hard disk) or kernel problem:

  - The keyboard does not work. This can normally be checked by pressing the Caps Lock key. If the Caps Lock light does not change, you have to replace your keyboard. (Before doing this, you should try to restart your computer and check all cables to the keyboard.)
  - The mouse pointer does not move.
  - The machine does not answer to a remote machine's pings.
  - Other programs that are not related to MySQL do not behave correctly.
  - Your system restarted unexpectedly. (A faulty user-level program should never be able to take down your system.)

  In this case, you should start by checking all your cables and run some diagnostic tool to check your hardware! You should also check whether there are any patches, updates, or service packs for your operating system that could likely solve your problem. Check also that all your libraries (such as `glibc`) are up to date.

  It is always good to use a machine with ECC memory to discover memory problems early.

- If your keyboard is locked up, you may be able to recover by logging in to your machine from another machine and executing `kbd_mode -a`.

- Please examine your system log file (`/var/log/messages` or similar) for reasons for your problem. If you think the problem is in MySQL, you should also examine MySQL's log files. See Section 5.4, “MySQL Server Logs”.

- If you do not think you have hardware problems, you should try to find out which program is causing problems. Try using `top`, `ps`, Task Manager, or some similar program, to check which program is taking all CPU or is locking the machine.

- Use `top`, `df`, or a similar program to check whether you are out of memory, disk space, file descriptors, or some other critical resource.
- If the problem is some runaway process, you can always try to kill it. If it does not want to die, there is probably a bug in the operating system.

If after you have examined all other possibilities and you have concluded that the MySQL server or a MySQL client is causing the problem, it is time to create a bug report for our mailing list or our support team. In the bug report, try to give a very detailed description of how the system is behaving and what you think is happening. You should also state why you think that MySQL is causing the problem. Take into consideration all the situations in this chapter. State any problems exactly how they appear when you examine your system. Use the “copy and paste” method for any output and error messages from programs and log files.

Try to describe in detail which program is not working and all symptoms you see. We have in the past received many bug reports that state only “the system does not work.” This provides us with no information about what could be the problem.

If a program fails, it is always useful to know the following information:

- Has the program in question made a segmentation fault (did it dump core)?
- Is the program taking up all available CPU time? Check with `top`. Let the program run for a while, it may simply be evaluating something computationally intensive.
- If the `mysqld` server is causing problems, can you get any response from it with `mysqladmin -u root ping` or `mysqladmin -u root processlist`?
- What does a client program say when you try to connect to the MySQL server? (Try with `mysql`, for example.) Does the client jam? Do you get any output from the program?

When sending a bug report, you should follow the outline described in Section 1.7, “How to Report Bugs or Problems”.

B.5.2 Common Errors When Using MySQL Programs

This section lists some errors that users frequently encounter when running MySQL programs. Although the problems show up when you try to run client programs, the solutions to many of the problems involves changing the configuration of the MySQL server.

B.5.2.1 Access denied

An `Access denied` error can have many causes. Often the problem is related to the MySQL accounts that the server permits client programs to use when connecting. See Section 6.2, “The MySQL Access Privilege System”, and Section 6.2.9, “Troubleshooting Problems Connecting to MySQL”.

B.5.2.2 Can't connect to [local] MySQL server

A MySQL client on Unix can connect to the `mysqld` server in two different ways: By using a Unix socket file to connect through a file in the file system (default `/tmp/mysql.sock`), or by using TCP/IP, which connects through a port number. A Unix socket file connection is faster than TCP/IP, but can be used only when connecting to a server on the same computer. A Unix socket file is used if you do not specify a host name or if you specify the special host name `localhost`.

If the MySQL server is running on Windows, you can connect using TCP/IP. If the server is started with the `--enable-named-pipe` option, you can also connect with named pipes if you run the client on the host where the server is running. The name of the named pipe is `MySQL` by default. If you do not give a host name when connecting to `mysqld`, a MySQL client first tries to connect to the named pipe. If that does not work, it connects to the TCP/IP port. You can force the use of named pipes on Windows by using `.` as the host name.

The error (2002) `Can't connect to ...` normally means that there is no MySQL server running on the system or that you are using an incorrect Unix socket file name or TCP/IP port number when trying to connect to the server. You should also check that the TCP/IP port you are using has not been blocked by a firewall or port blocking service.

The error (2003) `Can't connect to MySQL server on 'server' (10061)` indicates that the network connection has been refused. You should check that there is a MySQL server running, that it has network connections enabled, and that the network port you specified is the one configured on the server.

Start by checking whether there is a process named `mysqld` running on your server host. (Use `ps xa | grep mysqld` on Unix or the Task Manager on Windows.) If there is no such process, you should start the server. See Section 2.9.2, “Starting the Server”.

If a `mysqld` process is running, you can check it by trying the following commands. The port number or Unix socket file name might be different in your setup. `host_ip` represents the IP address of the machine where the server is running.

```
shell> mysqladmin version
shell> mysqladmin variables
shell> mysqladmin -h `hostname` version variables
shell> mysqladmin -h `hostname` --port=3306 version
shell> mysqladmin -h host_ip version
shell> mysqladmin --protocol=SOCKET --socket=/tmp/mysql.sock version
```

Note the use of backticks rather than forward quotation marks with the `hostname` command; these cause the output of `hostname` (that is, the current host name) to be substituted into the `mysqladmin` command. If you have no `hostname` command or are running on Windows, you can manually type the host name of your machine (without backticks) following the `-h` option. You can also try `-h 127.0.0.1` to connect with TCP/IP to the local host.

Make sure that the server has not been configured to ignore network connections or (if you are attempting to connect remotely) that it has not been configured to listen only locally on its network interfaces. If the server was started with `--skip-networking`, it will not accept TCP/IP connections at all. If the server was started with `--bind-address=127.0.0.1`, it will listen for TCP/IP connections only locally on the loopback interface and will not accept remote connections.

Check to make sure that there is no firewall blocking access to MySQL. Your firewall may be configured on the basis of the application being executed, or the port number used by MySQL for communication (3306 by default). Under Linux or Unix, check your IP tables (or similar) configuration to ensure that the port has not been blocked. Under Windows, applications such as ZoneAlarm or Windows Firewall may need to be configured not to block the MySQL port.

Here are some reasons the `Can't connect to local MySQL server` error might occur:

- `mysqld` is not running on the local host. Check your operating system's process list to ensure the `mysqld` process is present.
- You're running a MySQL server on Windows with many TCP/IP connections to it. If you're experiencing that quite often your clients get that error, you can find a workaround here: Connection to MySQL Server Failing on Windows.
- Someone has removed the Unix socket file that `mysqld` uses (`/tmp/mysql.sock` by default). For example, you might have a `cron` job that removes old files from the `/tmp` directory. You can always run `mysqladmin version` to check whether the Unix socket file that `mysqladmin` is trying to use really exists. The fix in this case is to change the `cron` job to not remove `mysql.sock` or to place the socket file somewhere else. See Section B.5.3.6, “How to Protect or Change the MySQL Unix Socket File”.
- You have started the `mysqld` server with the `--socket=/path/to/socket` option, but forgotten to tell client programs the new name of the socket file. If you change the socket path name for the

server, you must also notify the MySQL clients. You can do this by providing the same `--socket` option when you run client programs. You also need to ensure that clients have permission to access the `mysql.sock` file. To find out where the socket file is, you can do:

```
shell> netstat -ln | grep mysql
```

See Section B.5.3.6, “How to Protect or Change the MySQL Unix Socket File”.

- You are using Linux and one server thread has died (dumped core). In this case, you must kill the other `mysqld` threads (for example, with `kill`) before you can restart the MySQL server. See Section B.5.3.3, “What to Do If MySQL Keeps Crashing”.
- The server or client program might not have the proper access privileges for the directory that holds the Unix socket file or the socket file itself. In this case, you must either change the access privileges for the directory or socket file so that the server and clients can access them, or restart `mysqld` with a `--socket` option that specifies a socket file name in a directory where the server can create it and where client programs can access it.

If you get the error message `Can't connect to MySQL server on some_host`, you can try the following things to find out what the problem is:

- Check whether the server is running on that host by executing `telnet some_host 3306` and pressing the Enter key a couple of times. (3306 is the default MySQL port number. Change the value if your server is listening to a different port.) If there is a MySQL server running and listening to the port, you should get a response that includes the server's version number. If you get an error such as `telnet: Unable to connect to remote host: Connection refused`, then there is no server running on the given port.
- If the server is running on the local host, try using `mysqladmin -h localhost variables` to connect using the Unix socket file. Verify the TCP/IP port number that the server is configured to listen to (it is the value of the `port` variable.)
- If you are running under Linux and Security-Enhanced Linux (SELinux) is enabled, make sure you have disabled SELinux protection for the `mysqld` process.

Connection to MySQL Server Failing on Windows

When you're running a MySQL server on Windows with many TCP/IP connections to it, and you're experiencing that quite often your clients get a `Can't connect to MySQL server` error, the reason might be that Windows does not allow for enough ephemeral (short-lived) ports to serve those connections.

The purpose of `TIME_WAIT` is to keep a connection accepting packets even after the connection has been closed. This is because Internet routing can cause a packet to take a slow route to its destination and it may arrive after both sides have agreed to close. If the port is in use for a new connection, that packet from the old connection could break the protocol or compromise personal information from the original connection. The `TIME_WAIT` delay prevents this by ensuring that the port cannot be reused until after some time has been permitted for those delayed packets to arrive.

It is safe to reduce `TIME_WAIT` greatly on LAN connections because there is little chance of packets arriving at very long delays, as they could through the Internet with its comparatively large distances and latencies.

Windows permits ephemeral (short-lived) TCP ports to the user. After any port is closed it will remain in a `TIME_WAIT` status for 120 seconds. The port will not be available again until this time expires. The default range of port numbers depends on the version of Windows, with a more limited number of ports in older versions:

- Windows through Server 2003: Ports in range 1025–5000
- Windows Vista, Server 2008, and newer: Ports in range 49152–65535

With a small stack of available TCP ports (5000) and a high number of TCP ports being open and closed over a short period of time along with the `TIME_WAIT` status you have a good chance for running out of ports. There are two ways to address this problem:

- Reduce the number of TCP ports consumed quickly by investigating connection pooling or persistent connections where possible
- Tune some settings in the Windows registry (see below)

Important

The following procedure involves modifying the Windows registry. Before you modify the registry, make sure to back it up and make sure that you understand how to restore it if a problem occurs. For information about how to back up, restore, and edit the registry, view the following article in the Microsoft Knowledge Base: http://support.microsoft.com/kb/256986/EN-US/.

1. Start Registry Editor (`Regedt32.exe`).
2. Locate the following key in the registry:

   ```
   HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\Tcpip\Parameters
   ```

3. On the `Edit` menu, click `Add Value`, and then add the following registry value:

   ```
   Value Name: MaxUserPort
   Data Type: REG_DWORD
   Value: 65534
   ```

   This sets the number of ephemeral ports available to any user. The valid range is between 5000 and 65534 (decimal). The default value is 0x1388 (5000 decimal).

4. On the `Edit` menu, click `Add Value`, and then add the following registry value:

   ```
   Value Name: TcpTimedWaitDelay
   Data Type: REG_DWORD
   Value: 30
   ```

   This sets the number of seconds to hold a TCP port connection in `TIME_WAIT` state before closing. The valid range is between 30 and 300 decimal, although you may wish to check with Microsoft for the latest permitted values. The default value is 0x78 (120 decimal).

5. Quit Registry Editor.
6. Reboot the machine.

Note: Undoing the above should be as simple as deleting the registry entries you've created.

B.5.2.3 Lost connection to MySQL server

There are three likely causes for this error message.

Usually it indicates network connectivity trouble and you should check the condition of your network if this error occurs frequently. If the error message includes “during query,” this is probably the case you are experiencing.

Sometimes the “during query” form happens when millions of rows are being sent as part of one or more queries. If you know that this is happening, you should try increasing `net_read_timeout` from its default of 30 seconds to 60 seconds or longer, sufficient for the data transfer to complete.

More rarely, it can happen when the client is attempting the initial connection to the server. In this case, if your `connect_timeout` value is set to only a few seconds, you may be able to resolve the problem

by increasing it to ten seconds, perhaps more if you have a very long distance or slow connection. You can determine whether you are experiencing this more uncommon cause by using `SHOW GLOBAL STATUS LIKE 'Aborted_connects'`. It will increase by one for each initial connection attempt that the server aborts. You may see “reading authorization packet” as part of the error message; if so, that also suggests that this is the solution that you need.

If the cause is none of those just described, you may be experiencing a problem with `BLOB` values that are larger than `max_allowed_packet`, which can cause this error with some clients. Sometime you may see an `ER_NET_PACKET_TOO_LARGE` error, and that confirms that you need to increase `max_allowed_packet`.

B.5.2.4 Password Fails When Entered Interactively

MySQL client programs prompt for a password when invoked with a `--password` or `-p` option that has no following password value:

```
shell> mysql -u user_name -p
Enter password:
```

On some systems, you may find that your password works when specified in an option file or on the command line, but not when you enter it interactively at the `Enter password:` prompt. This occurs when the library provided by the system to read passwords limits password values to a small number of characters (typically eight). That is a problem with the system library, not with MySQL. To work around it, change your MySQL password to a value that is eight or fewer characters long, or put your password in an option file.

B.5.2.5 Host 'host_name' is blocked

If the following error occurs, it means that `mysqld` has received many connection requests from the given host that were interrupted in the middle:

```
Host 'host_name' is blocked because of many connection errors.
Unblock with 'mysqladmin flush-hosts'
```

The value of the `max_connect_errors` system variable determines how many successive interrupted connection requests are permitted. (See Section 5.1.7, “Server System Variables”.) After `max_connect_errors` failed requests without a successful connection, `mysqld` assumes that something is wrong (for example, that someone is trying to break in), and blocks the host from further connections until you issue a `FLUSH HOSTS` statement or execute a `mysqladmin flush-hosts` command.

By default, `mysqld` blocks a host after 100 connection errors. You can adjust the value by setting `max_connect_errors` at server startup:

```
shell> mysqld_safe --max_connect_errors=10000 &
```

The value can also be set at runtime:

```
mysql> SET GLOBAL max_connect_errors=10000;
```

If you get the `Host 'host_name' is blocked` error message for a given host, you should first verify that there is nothing wrong with TCP/IP connections from that host. If you are having network problems, it does you no good to increase the value of the `max_connect_errors` variable.

B.5.2.6 Too many connections

If you get a `Too many connections` error when you try to connect to the `mysqld` server, this means that all available connections are in use by other clients.

The number of connections permitted is controlled by the `max_connections` system variable. The default value is 151 to improve performance when MySQL is used with the Apache Web server. (Previously, the default was 100.) If you need to support more connections, you should set a larger value for this variable.

`mysqld` actually permits `max_connections+1` clients to connect. The extra connection is reserved for use by accounts that have the `CONNECTION_ADMIN` or `SUPER` privilege. By granting the privilege to administrators and not to normal users (who should not need it), an administrator who also has the `PROCESS` privilege can connect to the server and use `SHOW PROCESSLIST` to diagnose problems even if the maximum number of unprivileged clients are connected. See Section 13.7.6.29, “SHOW PROCESSLIST Syntax”.

The maximum number of connections MySQL supports depends on the quality of the thread library on a given platform, the amount of RAM available, how much RAM is used for each connection, the workload from each connection, and the desired response time. Linux or Solaris should be able to support at least 500 to 1000 simultaneous connections routinely and as many as 10,000 connections if you have many gigabytes of RAM available and the workload from each is low or the response time target undemanding. Windows is limited to (open tables × 2 + open connections) < 2048 due to the Posix compatibility layer used on that platform.

Increasing `open-files-limit` may be necessary. Also see Section 2.5, “Installing MySQL on Linux”, for how to raise the operating system limit on how many handles can be used by MySQL.

B.5.2.7 Out of memory

If you issue a query using the `mysql` client program and receive an error like the following one, it means that `mysql` does not have enough memory to store the entire query result:

```
mysql: Out of memory at line 42, 'malloc.c'
mysql: needed 8136 byte (8k), memory in use: 12481367 bytes (12189k)
ERROR 2008: MySQL client ran out of memory
```

To remedy the problem, first check whether your query is correct. Is it reasonable that it should return so many rows? If not, correct the query and try again. Otherwise, you can invoke `mysql` with the `--quick` option. This causes it to use the `mysql_use_result()` C API function to retrieve the result set, which places less of a load on the client (but more on the server).

B.5.2.8 MySQL server has gone away

This section also covers the related `Lost connection to server during query` error.

The most common reason for the `MySQL server has gone away` error is that the server timed out and closed the connection. In this case, you normally get one of the following error codes (which one you get is operating system-dependent).

Error Code	Description
`CR_SERVER_GONE_ERROR`	The client couldn't send a question to the server.
`CR_SERVER_LOST`	The client didn't get an error when writing to the server, but it didn't get a full answer (or any answer) to the question.

By default, the server closes the connection after eight hours if nothing has happened. You can change the time limit by setting the `wait_timeout` variable when you start `mysqld`. See Section 5.1.7, “Server System Variables”.

If you have a script, you just have to issue the query again for the client to do an automatic reconnection. This assumes that you have automatic reconnection in the client enabled (which is the default for the `mysql` command-line client).

Some other common reasons for the `MySQL server has gone away` error are:

- You (or the db administrator) has killed the running thread with a `KILL` statement or a `mysqladmin kill` command.
- You tried to run a query after closing the connection to the server. This indicates a logic error in the application that should be corrected.
- A client application running on a different host does not have the necessary privileges to connect to the MySQL server from that host.
- You got a timeout from the TCP/IP connection on the client side. This may happen if you have been using the commands: `mysql_options(..., MYSQL_OPT_READ_TIMEOUT,...)` or `mysql_options(..., MYSQL_OPT_WRITE_TIMEOUT,...)`. In this case increasing the timeout may help solve the problem.
- You have encountered a timeout on the server side and the automatic reconnection in the client is disabled (the `reconnect` flag in the `MYSQL` structure is equal to 0).
- You are using a Windows client and the server had dropped the connection (probably because `wait_timeout` expired) before the command was issued.

  The problem on Windows is that in some cases MySQL does not get an error from the OS when writing to the TCP/IP connection to the server, but instead gets the error when trying to read the answer from the connection.

  The solution to this is to either do a `mysql_ping()` on the connection if there has been a long time since the last query (this is what Connector/ODBC does) or set `wait_timeout` on the `mysqld` server so high that it in practice never times out.
- You can also get these errors if you send a query to the server that is incorrect or too large. If `mysqld` receives a packet that is too large or out of order, it assumes that something has gone wrong with the client and closes the connection. If you need big queries (for example, if you are working with big `BLOB` columns), you can increase the query limit by setting the server's `max_allowed_packet` variable, which has a default value of 64MB. You may also need to increase the maximum packet size on the client end. More information on setting the packet size is given in Section B.5.2.9, “Packet Too Large”.

  An `INSERT` or `REPLACE` statement that inserts a great many rows can also cause these sorts of errors. Either one of these statements sends a single request to the server irrespective of the number of rows to be inserted; thus, you can often avoid the error by reducing the number of rows sent per `INSERT` or `REPLACE`.
- It is also possible to see this error if host name lookups fail (for example, if the DNS server on which your server or network relies goes down). This is because MySQL is dependent on the host system for name resolution, but has no way of knowing whether it is working—from MySQL's point of view the problem is indistinguishable from any other network timeout.

  You may also see the `MySQL server has gone away` error if MySQL is started with the `--skip-networking` option.

  Another networking issue that can cause this error occurs if the MySQL port (default 3306) is blocked by your firewall, thus preventing any connections at all to the MySQL server.
- You can also encounter this error with applications that fork child processes, all of which try to use the same connection to the MySQL server. This can be avoided by using a separate connection for each child process.
- You have encountered a bug where the server died while executing the query.

You can check whether the MySQL server died and restarted by executing `mysqladmin version` and examining the server's uptime. If the client connection was broken because `mysqld` crashed and restarted, you should concentrate on finding the reason for the crash. Start by checking whether

issuing the query again kills the server again. See Section B.5.3.3, “What to Do If MySQL Keeps Crashing”.

You can get more information about the lost connections by starting `mysqld` with the `log_error_verbosity` system variable set to 3. This logs some of the disconnection messages in the `hostname.err` file. See Section 5.4.2, “The Error Log”.

If you want to create a bug report regarding this problem, be sure that you include the following information:

- Indicate whether the MySQL server died. You can find information about this in the server error log. See Section B.5.3.3, “What to Do If MySQL Keeps Crashing”.
- If a specific query kills `mysqld` and the tables involved were checked with `CHECK TABLE` before you ran the query, can you provide a reproducible test case? See Section 28.5, “Debugging and Porting MySQL”.
- What is the value of the `wait_timeout` system variable in the MySQL server? (`mysqladmin variables` gives you the value of this variable.)
- Have you tried to run `mysqld` with the general query log enabled to determine whether the problem query appears in the log? (See Section 5.4.3, “The General Query Log”.)

See also Section B.5.2.10, “Communication Errors and Aborted Connections”, and Section 1.7, “How to Report Bugs or Problems”.

B.5.2.9 Packet Too Large

A communication packet is a single SQL statement sent to the MySQL server, a single row that is sent to the client, or a binary log event sent from a master replication server to a slave.

The largest possible packet that can be transmitted to or from a MySQL 8.0 server or client is 1GB.

When a MySQL client or the `mysqld` server receives a packet bigger than `max_allowed_packet` bytes, it issues an `ER_NET_PACKET_TOO_LARGE` error and closes the connection. With some clients, you may also get a `Lost connection to MySQL server during query` error if the communication packet is too large.

Both the client and the server have their own `max_allowed_packet` variable, so if you want to handle big packets, you must increase this variable both in the client and in the server.

If you are using the `mysql` client program, its default `max_allowed_packet` variable is 16MB. To set a larger value, start `mysql` like this:

```
shell> mysql --max_allowed_packet=32M
```

That sets the packet size to 32MB.

The server's default `max_allowed_packet` value is 64MB. You can increase this if the server needs to handle big queries (for example, if you are working with big `BLOB` columns). For example, to set the variable to 128MB, start the server like this:

```
shell> mysqld --max_allowed_packet=128M
```

You can also use an option file to set `max_allowed_packet`. For example, to set the size for the server to 128MB, add the following lines in an option file:

```
[mysqld]
```

```
max_allowed_packet=128M
```

It is safe to increase the value of this variable because the extra memory is allocated only when needed. For example, `mysqld` allocates more memory only when you issue a long query or when `mysqld` must return a large result row. The small default value of the variable is a precaution to catch incorrect packets between the client and server and also to ensure that you do not run out of memory by using large packets accidentally.

You can also get strange problems with large packets if you are using large `BLOB` values but have not given `mysqld` access to enough memory to handle the query. If you suspect this is the case, try adding `ulimit -d 256000` to the beginning of the `mysqld_safe` script and restarting `mysqld`.

B.5.2.10 Communication Errors and Aborted Connections

If connection problems occur such as communication errors or aborted connections, use these sources of information to diagnose problems:

- The error log. See Section 5.4.2, “The Error Log”.
- The general query log. See Section 5.4.3, “The General Query Log”.
- The `Aborted_xxx` and `Connection_errors_xxx` status variables. See Section 5.1.9, “Server Status Variables”.
- The host cache, which is accessible using the `host_cache` Performance Schema table. See Section 8.12.4.2, “DNS Lookup Optimization and the Host Cache”, and Section 25.11.16.1, “The host_cache Table”.

If the server has the `log_error_verbosity` system variable set to 3, you might find messages like this in your error log:

```
[Note] Aborted connection 854 to db: 'employees' user: 'josh'
```

If a client is unable even to connect, the server increments the `Aborted_connects` status variable. Unsuccessful connection attempts can occur for the following reasons:

- A client attempts to access a database but has no privileges for it.
- A client uses an incorrect password.
- A connection packet does not contain the right information.
- It takes more than `connect_timeout` seconds to obtain a connect packet. See Section 5.1.7, “Server System Variables”.

If these kinds of things happen, it might indicate that someone is trying to break into your server! If the general query log is enabled, messages for these types of problems are logged to it.

If a client successfully connects but later disconnects improperly or is terminated, the server increments the `Aborted_clients` status variable, and logs an `Aborted connection` message to the error log. The cause can be any of the following:

- The client program did not call `mysql_close()` before exiting.
- The client had been sleeping more than `wait_timeout` or `interactive_timeout` seconds without issuing any requests to the server. See Section 5.1.7, “Server System Variables”.
- The client program ended abruptly in the middle of a data transfer.

Other reasons for problems with aborted connections or aborted clients:

- The `max_allowed_packet` variable value is too small or queries require more memory than you have allocated for `mysqld`. See Section B.5.2.9, “Packet Too Large”.
- Use of Ethernet protocol with Linux, both half and full duplex. Some Linux Ethernet drivers have this bug. You should test for this bug by transferring a huge file using FTP between the client and server machines. If a transfer goes in burst-pause-burst-pause mode, you are experiencing a Linux duplex syndrome. Switch the duplex mode for both your network card and hub/switch to either full duplex or to half duplex and test the results to determine the best setting.
- A problem with the thread library that causes interrupts on reads.
- Badly configured TCP/IP.
- Faulty Ethernets, hubs, switches, cables, and so forth. This can be diagnosed properly only by replacing hardware.

See also Section B.5.2.8, “MySQL server has gone away”.

B.5.2.11 The table is full

If a table-full error occurs, it may be that the disk is full or that the table has reached its maximum size. The effective maximum table size for MySQL databases is usually determined by operating system constraints on file sizes, not by MySQL internal limits. See Section C.10.3, “Limits on Table Size”.

B.5.2.12 Can't create/write to file

If you get an error of the following type for some queries, it means that MySQL cannot create a temporary file for the result set in the temporary directory:

```
Can't create/write to file '\\sqla3fe_0.ism'.
```

The preceding error is a typical message for Windows; the Unix message is similar.

One fix is to start `mysqld` with the `--tmpdir` option or to add the option to the `[mysqld]` section of your option file. For example, to specify a directory of `C:\temp`, use these lines:

```
[mysqld]
tmpdir=C:/temp
```

The `C:\temp` directory must exist and have sufficient space for the MySQL server to write to. See Section 4.2.6, “Using Option Files”.

Another cause of this error can be permissions issues. Make sure that the MySQL server can write to the `tmpdir` directory.

Check also the error code that you get with `perror`. One reason the server cannot write to a table is that the file system is full:

```
shell> perror 28
OS error code  28:  No space left on device
```

If you get an error of the following type during startup, it indicates that the file system or directory used for storing data files is write protected. Provided that the write error is to a test file, the error is not serious and can be safely ignored.

```
Can't create test file /usr/local/mysql/data/master.lower-test
```

B.5.2.13 Commands out of sync

If you get `Commands out of sync; you can't run this command now` in your client code, you are calling client functions in the wrong order.

This can happen, for example, if you are using `mysql_use_result()` and try to execute a new query before you have called `mysql_free_result()`. It can also happen if you try to execute two queries that return data without calling `mysql_use_result()` or `mysql_store_result()` in between.

B.5.2.14 Ignoring user

If you get the following error, it means that when `mysqld` was started or when it reloaded the grant tables, it found an account in the `user` table that had an invalid password.

`Found wrong password for user 'some_user'@'some_host'; ignoring user`

As a result, the account is simply ignored by the permission system. To fix this problem, assign a new, valid password to the account.

B.5.2.15 Table 'tbl_name' doesn't exist

If you get either of the following errors, it usually means that no table exists in the default database with the given name:

```
Table 'tbl_name' doesn't exist
Can't find file: 'tbl_name' (errno: 2)
```

In some cases, it may be that the table does exist but that you are referring to it incorrectly:

- Because MySQL uses directories and files to store databases and tables, database and table names are case sensitive if they are located on a file system that has case-sensitive file names.
- Even for file systems that are not case-sensitive, such as on Windows, all references to a given table within a query must use the same lettercase.

You can check which tables are in the default database with `SHOW TABLES`. See Section 13.7.6, “SHOW Syntax”.

B.5.2.16 Can't initialize character set

You might see an error like this if you have character set problems:

```
MySQL Connection Failed: Can't initialize character set charset_name
```

This error can have any of the following causes:

- The character set is a multibyte character set and you have no support for the character set in the client. In this case, you need to recompile the client by running `CMake` with the `-DDEFAULT_CHARSET=charset_name` option. See Section 2.8.4, “MySQL Source-Configuration Options”.

  All standard MySQL binaries are compiled with support for all multibyte character sets.

- The character set is a simple character set that is not compiled into `mysqld`, and the character set definition files are not in the place where the client expects to find them.

  In this case, you need to use one of the following methods to solve the problem:

  - Recompile the client with support for the character set. See Section 2.8.4, “MySQL Source-Configuration Options”.

- Specify to the client the directory where the character set definition files are located. For many clients, you can do this with the `--character-sets-dir` option.
- Copy the character definition files to the path where the client expects them to be.

B.5.2.17 File Not Found and Similar Errors

If you get `ERROR 'file_name' not found (errno: 23)`, `Can't open file: file_name (errno: 24)`, or any other error with `errno 23` or `errno 24` from MySQL, it means that you have not allocated enough file descriptors for the MySQL server. You can use the `perror` utility to get a description of what the error number means:

```
shell> perror 23
OS error code  23:  File table overflow
shell> perror 24
OS error code  24:  Too many open files
shell> perror 11
OS error code  11:  Resource temporarily unavailable
```

The problem here is that `mysqld` is trying to keep open too many files simultaneously. You can either tell `mysqld` not to open so many files at once or increase the number of file descriptors available to `mysqld`.

To tell `mysqld` to keep open fewer files at a time, you can make the table cache smaller by reducing the value of the `table_open_cache` system variable (the default value is 64). This may not entirely prevent running out of file descriptors because in some circumstances the server may attempt to extend the cache size temporarily, as described in Section 8.4.3.1, “How MySQL Opens and Closes Tables”. Reducing the value of `max_connections` also reduces the number of open files (the default value is 100).

To change the number of file descriptors available to `mysqld`, you can use the `--open-files-limit` option to `mysqld_safe` or set the `open_files_limit` system variable. See Section 5.1.7, “Server System Variables”. The easiest way to set these values is to add an option to your option file. See Section 4.2.6, “Using Option Files”. If you have an old version of `mysqld` that does not support setting the open files limit, you can edit the `mysqld_safe` script. There is a commented-out line `ulimit -n 256` in the script. You can remove the `#` character to uncomment this line, and change the number `256` to set the number of file descriptors to be made available to `mysqld`.

`--open-files-limit` and `ulimit` can increase the number of file descriptors, but only up to the limit imposed by the operating system. There is also a “hard” limit that can be overridden only if you start `mysqld_safe` or `mysqld` as `root` (just remember that you also need to start the server with the `--user` option in this case so that it does not continue to run as `root` after it starts up). If you need to increase the operating system limit on the number of file descriptors available to each process, consult the documentation for your system.

Note

If you run the `tcsh` shell, `ulimit` does not work! `tcsh` also reports incorrect values when you ask for the current limits. In this case, you should start `mysqld_safe` using `sh`.

B.5.2.18 Table-Corruption Issues

If you have started `mysqld` with `--myisam-recover-options`, MySQL automatically checks and tries to repair `MyISAM` tables if they are marked as 'not closed properly' or 'crashed'. If this happens, MySQL writes an entry in the `hostname.err` file `'Warning: Checking table ...'` which is followed by `Warning: Repairing table` if the table needs to be repaired. If you get a lot of these errors, without `mysqld` having died unexpectedly just before, then something is wrong and needs to be investigated further.

When the server detects MyISAM table corruption, it writes additional information to the error log, such as the name and line number of the source file, and the list of threads accessing the table. Example: Got an error from thread_id=1, mi_dynrec.c:368. This is useful information to include in bug reports.

See also Section 5.1.6, “Server Command Options”, and Section 28.5.1.7, “Making a Test Case If You Experience Table Corruption”.

B.5.3 Administration-Related Issues

B.5.3.1 Problems with File Permissions

If you have problems with file permissions, the UMASK or UMASK_DIR environment variable might be set incorrectly when mysqld starts. For example, MySQL might issue the following error message when you create a table:

```
ERROR: Can't find file: 'path/with/file_name' (Errcode: 13)
```

The default UMASK and UMASK_DIR values are 0640 and 0750, respectively. MySQL assumes that the value for UMASK or UMASK_DIR is in octal if it starts with a zero. For example, setting UMASK=0600 is equivalent to UMASK=384 because 0600 octal is 384 decimal.

To change the default UMASK value, start mysqld_safe as follows:

```
shell> UMASK=384  # = 600 in octal
shell> export UMASK
shell> mysqld_safe &
```

By default, MySQL creates database directories with an access permission value of 0750. To modify this behavior, set the UMASK_DIR variable. If you set its value, new directories are created with the combined UMASK and UMASK_DIR values. For example, to give group access to all new directories, start mysqld_safe as follows:

```
shell> UMASK_DIR=504  # = 770 in octal
shell> export UMASK_DIR
shell> mysqld_safe &
```

For additional details, see Section 4.9, “MySQL Program Environment Variables”.

B.5.3.2 How to Reset the Root Password

If you have never assigned a root password for MySQL, the server does not require a password at all for connecting as root. However, this is insecure. For instructions on assigning a password, see Section 2.9.4, “Securing the Initial MySQL Account”.

If you know the root password and want to change it, see Section 13.7.1.1, “ALTER USER Syntax”, and Section 13.7.1.10, “SET PASSWORD Syntax”.

If you assigned a root password previously but have forgotten it, you can assign a new password. The following sections provide instructions for Windows and Unix and Unix-like systems, as well as generic instructions that apply to any system.

Resetting the Root Password: Windows Systems

On Windows, use the following procedure to reset the password for the MySQL 'root'@'localhost' account. To change the password for a root account with a different host name part, modify the instructions to use that host name.

1. Log on to your system as Administrator.

2. Stop the MySQL server if it is running. For a server that is running as a Windows service, go to the Services manager: From the **Start** menu, select **Control Panel**, then **Administrative Tools**, then **Services**. Find the MySQL service in the list and stop it.

   If your server is not running as a service, you may need to use the Task Manager to force it to stop.

3. Create a text file containing the password-assignment statement on a single line. Replace the password with the password that you want to use.

   ```
   ALTER USER 'root'@'localhost' IDENTIFIED BY 'MyNewPass';
   ```

4. Save the file. This example assumes that you name the file `C:\mysql-init.txt`.

5. Open a console window to get to the command prompt: From the **Start** menu, select **Run**, then enter `cmd` as the command to be run.

6. Start the MySQL server with the special `--init-file` option (notice that the backslash in the option value is doubled):

   ```
   C:\> cd "C:\Program Files\MySQL\MySQL Server 8.0\bin"
   C:\> mysqld --init-file=C:\\mysql-init.txt
   ```

   If you installed MySQL to a different location, adjust the `cd` command accordingly.

   The server executes the contents of the file named by the `--init-file` option at startup, changing the `'root'@'localhost'` account password.

   To have server output to appear in the console window rather than in a log file, add the `--console` option to the `mysqld` command.

   If you installed MySQL using the MySQL Installation Wizard, you may need to specify a `--defaults-file` option. For example:

   ```
   C:\> mysqld
           --defaults-file="C:\\ProgramData\\MySQL\\MySQL Server 8.0\\my.ini"
           --init-file=C:\\mysql-init.txt
   ```

   The appropriate `--defaults-file` setting can be found using the Services Manager: From the **Start** menu, select **Control Panel**, then **Administrative Tools**, then **Services**. Find the MySQL service in the list, right-click it, and choose the `Properties` option. The `Path to executable` field contains the `--defaults-file` setting.

7. After the server has started successfully, delete `C:\mysql-init.txt`.

You should now be able to connect to the MySQL server as `root` using the new password. Stop the MySQL server and restart it normally. If you run the server as a service, start it from the Windows Services window. If you start the server manually, use whatever command you normally use.

Resetting the Root Password: Unix and Unix-Like Systems

On Unix, use the following procedure to reset the password for the MySQL `'root'@'localhost'` account. To change the password for a `root` account with a different host name part, modify the instructions to use that host name.

The instructions assume that you will start the MySQL server from the Unix login account that you normally use for running it. For example, if you run the server using the `mysql` login account, you should log in as `mysql` before using the instructions. Alternatively, you can log in as `root`, but in this case you *must* start `mysqld` with the `--user=mysql` option. If you start the server as `root` without

using `--user=mysql`, the server may create `root`-owned files in the data directory, such as log files, and these may cause permission-related problems for future server startups. If that happens, you will need to either change the ownership of the files to `mysql` or remove them.

1. Log on to your system as the Unix user that the MySQL server runs as (for example, `mysql`).
2. Stop the MySQL server if it is running. Locate the `.pid` file that contains the server's process ID. The exact location and name of this file depend on your distribution, host name, and configuration. Common locations are `/var/lib/mysql/`, `/var/run/mysqld/`, and `/usr/local/mysql/data/`. Generally, the file name has an extension of `.pid` and begins with either `mysqld` or your system's host name.

   Stop the MySQL server by sending a normal `kill` (not `kill -9`) to the `mysqld` process. Use the actual path name of the `.pid` file in the following command:

   ```
   shell> kill `cat /mysql-data-directory/host_name.pid`
   ```

   Use backticks (not forward quotation marks) with the `cat` command. These cause the output of `cat` to be substituted into the `kill` command.
3. Create a text file containing the password-assignment statement on a single line. Replace the password with the password that you want to use.

   ```
   ALTER USER 'root'@'localhost' IDENTIFIED BY 'MyNewPass';
   ```
4. Save the file. This example assumes that you name the file `/home/me/mysql-init`. The file contains the password, so do not save it where it can be read by other users. If you are not logged in as `mysql` (the user the server runs as), make sure that the file has permissions that permit `mysql` to read it.
5. Start the MySQL server with the special `--init-file` option:

   ```
   shell> mysqld --init-file=/home/me/mysql-init &
   ```

   The server executes the contents of the file named by the `--init-file` option at startup, changing the `'root'@'localhost'` account password.

   Other options may be necessary as well, depending on how you normally start your server. For example, `--defaults-file` may be needed before `--init-file`.
6. After the server has started successfully, delete `/home/me/mysql-init`.

You should now be able to connect to the MySQL server as `root` using the new password. Stop the server and restart it normally.

Resetting the Root Password: Generic Instructions

The preceding sections provide password-resetting instructions specifically for Windows and Unix and Unix-like systems. Alternatively, on any platform, you can reset the password using the `mysql` client (but this approach is less secure):

1. Stop the MySQL server if necessary, then restart it with the `--skip-grant-tables` option. This enables anyone to connect without a password and with all privileges, and disables account-management statements such as `ALTER USER` and `SET PASSWORD`. Because this is insecure, if the server is started with the `--skip-grant-tables` option, it enables `--skip-networking` automatically to prevent remote connections.
2. Connect to the MySQL server using the `mysql` client; no password is necessary because the server was started with `--skip-grant-tables`:

```
shell> mysql
```

3. In the `mysql` client, tell the server to reload the grant tables so that account-management statements work:

```
mysql> FLUSH PRIVILEGES;
```

Then change the `'root'@'localhost'` account password. Replace the password with the password that you want to use. To change the password for a `root` account with a different host name part, modify the instructions to use that host name.

```
mysql> ALTER USER 'root'@'localhost' IDENTIFIED BY 'MyNewPass';
```

You should now be able to connect to the MySQL server as `root` using the new password. Stop the server and restart it normally (without the `--skip-grant-tables` and `--skip-networking` options).

B.5.3.3 What to Do If MySQL Keeps Crashing

Each MySQL version is tested on many platforms before it is released. This does not mean that there are no bugs in MySQL, but if there are bugs, they should be very few and can be hard to find. If you have a problem, it always helps if you try to find out exactly what crashes your system, because you have a much better chance of getting the problem fixed quickly.

First, you should try to find out whether the problem is that the `mysqld` server dies or whether your problem has to do with your client. You can check how long your `mysqld` server has been up by executing `mysqladmin version`. If `mysqld` has died and restarted, you may find the reason by looking in the server's error log. See Section 5.4.2, “The Error Log”.

On some systems, you can find in the error log a stack trace of where `mysqld` died that you can resolve with the `resolve_stack_dump` program. See Section 28.5, “Debugging and Porting MySQL”. Note that the variable values written in the error log may not always be 100% correct.

Many server crashes are caused by corrupted data files or index files. MySQL updates the files on disk with the `write()` system call after every SQL statement and before the client is notified about the result. (This is not true if you are running with `--delay-key-write`, in which case data files are written but not index files.) This means that data file contents are safe even if `mysqld` crashes, because the operating system ensures that the unflushed data is written to disk. You can force MySQL to flush everything to disk after every SQL statement by starting `mysqld` with the `--flush` option.

The preceding means that normally you should not get corrupted tables unless one of the following happens:

- The MySQL server or the server host was killed in the middle of an update.
- You have found a bug in `mysqld` that caused it to die in the middle of an update.
- Some external program is manipulating data files or index files at the same time as `mysqld` without locking the table properly.
- You are running many `mysqld` servers using the same data directory on a system that does not support good file system locks (normally handled by the `lockd` lock manager), or you are running multiple servers with external locking disabled.
- You have a crashed data file or index file that contains very corrupt data that confused `mysqld`.
- You have found a bug in the data storage code. This isn't likely, but it is at least possible. In this case, you can try to change the storage engine to another engine by using `ALTER TABLE` on a repaired copy of the table.

Because it is very difficult to know why something is crashing, first try to check whether things that work for others crash for you. Try the following things:

- Stop the `mysqld` server with `mysqladmin shutdown`, run `myisamchk --silent --force */*.MYI` from the data directory to check all `MyISAM` tables, and restart `mysqld`. This ensures that you are running from a clean state. See Chapter 5, *MySQL Server Administration*.
- Start `mysqld` with the general query log enabled (see Section 5.4.3, “The General Query Log”). Then try to determine from the information written to the log whether some specific query kills the server. About 95% of all bugs are related to a particular query. Normally, this is one of the last queries in the log file just before the server restarts. See Section 5.4.3, “The General Query Log”. If you can repeatedly kill MySQL with a specific query, even when you have checked all tables just before issuing it, then you have isolated the bug and should submit a bug report for it. See Section 1.7, “How to Report Bugs or Problems”.
- Try to make a test case that we can use to repeat the problem. See Section 28.5, “Debugging and Porting MySQL”.
- Try the `fork_big.pl` script. (It is located in the `tests` directory of source distributions.)
- Configuring MySQL for debugging makes it much easier to gather information about possible errors if something goes wrong. Reconfigure MySQL with the `-DWITH_DEBUG=1` option to `CMake` and then recompile. See Section 28.5, “Debugging and Porting MySQL”.
- Make sure that you have applied the latest patches for your operating system.
- Use the `--skip-external-locking` option to `mysqld`. On some systems, the `lockd` lock manager does not work properly; the `--skip-external-locking` option tells `mysqld` not to use external locking. (This means that you cannot run two `mysqld` servers on the same data directory and that you must be careful if you use `myisamchk`. Nevertheless, it may be instructive to try the option as a test.)
- If `mysqld` appears to be running but not responding, try `mysqladmin -u root processlist`. Sometimes `mysqld` is not hung even though it seems unresponsive. The problem may be that all connections are in use, or there may be some internal lock problem. `mysqladmin -u root processlist` usually is able to make a connection even in these cases, and can provide useful information about the current number of connections and their status.
- Run the command `mysqladmin -i 5 status` or `mysqladmin -i 5 -r status` in a separate window to produce statistics while running other queries.
- Try the following:

  1. Start `mysqld` from `gdb` (or another debugger). See Section 28.5, “Debugging and Porting MySQL”.
  2. Run your test scripts.
  3. Print the backtrace and the local variables at the three lowest levels. In `gdb`, you can do this with the following commands when `mysqld` has crashed inside `gdb`:

     ```
     backtrace
     info local
     up
     info local
     up
     info local
     ```

     With `gdb`, you can also examine which threads exist with `info threads` and switch to a specific thread with `thread N`, where *`N`* is the thread ID.

- Try to simulate your application with a Perl script to force MySQL to crash or misbehave.

- Send a normal bug report. See Section 1.7, “How to Report Bugs or Problems”. Be even more detailed than usual. Because MySQL works for many people, the crash might result from something that exists only on your computer (for example, an error that is related to your particular system libraries).
- If you have a problem with tables containing dynamic-length rows and you are using only `VARCHAR` columns (not `BLOB` or `TEXT` columns), you can try to change all `VARCHAR` to `CHAR` with `ALTER TABLE`. This forces MySQL to use fixed-size rows. Fixed-size rows take a little extra space, but are much more tolerant to corruption.

  The current dynamic row code has been in use for several years with very few problems, but dynamic-length rows are by nature more prone to errors, so it may be a good idea to try this strategy to see whether it helps.
- Consider the possibility of hardware faults when diagnosing problems. Defective hardware can be the cause of data corruption. Pay particular attention to your memory and disk subsystems when troubleshooting hardware.

B.5.3.4 How MySQL Handles a Full Disk

This section describes how MySQL responds to disk-full errors (such as “no space left on device”), and to quota-exceeded errors (such as “write failed” or “user block limit reached”).

This section is relevant for writes to `MyISAM` tables. It also applies for writes to binary log files and binary log index file, except that references to “row” and “record” should be understood to mean “event.”

When a disk-full condition occurs, MySQL does the following:

- It checks once every minute to see whether there is enough space to write the current row. If there is enough space, it continues as if nothing had happened.
- Every 10 minutes it writes an entry to the log file, warning about the disk-full condition.

To alleviate the problem, take the following actions:

- To continue, you only have to free enough disk space to insert all records.
- Alternatively, to abort the thread, use `mysqladmin kill`. The thread is aborted the next time it checks the disk (in one minute).
- Other threads might be waiting for the table that caused the disk-full condition. If you have several “locked” threads, killing the one thread that is waiting on the disk-full condition enables the other threads to continue.

Exceptions to the preceding behavior are when you use `REPAIR TABLE` or `OPTIMIZE TABLE` or when the indexes are created in a batch after `LOAD DATA INFILE` or after an `ALTER TABLE` statement. All of these statements may create large temporary files that, if left to themselves, would cause big problems for the rest of the system. If the disk becomes full while MySQL is doing any of these operations, it removes the big temporary files and mark the table as crashed. The exception is that for `ALTER TABLE`, the old table is left unchanged.

B.5.3.5 Where MySQL Stores Temporary Files

On Unix, MySQL uses the value of the `TMPDIR` environment variable as the path name of the directory in which to store temporary files. If `TMPDIR` is not set, MySQL uses the system default, which is usually `/tmp`, `/var/tmp`, or `/usr/tmp`.

On Windows, MySQL checks in order the values of the `TMPDIR`, `TEMP`, and `TMP` environment variables. For the first one found to be set, MySQL uses it and does not check those remaining. If none of

`TMPDIR`, `TEMP`, or `TMP` are set, MySQL uses the Windows system default, which is usually `C:\windows\temp\`.

If the file system containing your temporary file directory is too small, you can use the `mysqld --tmpdir` option to specify a directory in a file system where you have enough space. On replication slaves, you can use `--slave-load-tmpdir` to specify a separate directory for holding temporary files when replicating `LOAD DATA INFILE` statements.

The `--tmpdir` option can be set to a list of several paths that are used in round-robin fashion. Paths should be separated by colon characters (`:`) on Unix and semicolon characters (`;`) on Windows.

Note

To spread the load effectively, these paths should be located on different *physical* disks, not different partitions of the same disk.

If the MySQL server is acting as a replication slave, you should be sure to set `--slave-load-tmpdir` not to point to a directory that is on a memory-based file system or to a directory that is cleared when the server host restarts. A replication slave needs some of its temporary files to survive a machine restart so that it can replicate temporary tables or `LOAD DATA INFILE` operations. If files in the slave temporary file directory are lost when the server restarts, replication fails.

MySQL arranges that temporary files are removed if `mysqld` is terminated. On platforms that support it (such as Unix), this is done by unlinking the file after opening it. The disadvantage of this is that the name does not appear in directory listings and you do not see a big temporary file that fills up the file system in which the temporary file directory is located. (In such cases, `lsof +L1` may be helpful in identifying large files associated with `mysqld`.)

When sorting (`ORDER BY` or `GROUP BY`), MySQL normally uses one or two temporary files. The maximum disk space required is determined by the following expression:

```
(length of what is sorted + sizeof(row pointer))
* number of matched rows
* 2
```

The row pointer size is usually four bytes, but may grow in the future for really big tables.

For some `SELECT` queries, MySQL also creates temporary SQL tables. These are not hidden and have names of the form `SQL_*`.

DDL operations that rebuild the table and are not performed online using the `ALGORITHM=INPLACE` technique create a temporary copy of the original table in the same directory as the original table.

Online DDL operations may use temporary log files for recording concurrent DML, temporary sort files when creating an index, and temporary intermediate tables files when rebuilding the table. For more information, see Section 15.12.3, “Online DDL Space Requirements”.

`InnoDB` user-created temporary tables and on-disk internal temporary tables are created in a temporary tablespace file named `ibtmp1` in the MySQL data directory. For more information, see Section 15.4.11, “Temporary Tablespace”.

B.5.3.6 How to Protect or Change the MySQL Unix Socket File

The default location for the Unix socket file that the server uses for communication with local clients is `/tmp/mysql.sock`. (For some distribution formats, the directory might be different, such as `/var/lib/mysql` for RPMs.)

On some versions of Unix, anyone can delete files in the `/tmp` directory or other similar directories used for temporary files. If the socket file is located in such a directory on your system, this might cause problems.

On most versions of Unix, you can protect your `/tmp` directory so that files can be deleted only by their owners or the superuser (`root`). To do this, set the `sticky` bit on the `/tmp` directory by logging in as `root` and using the following command:

```
shell> chmod +t /tmp
```

You can check whether the `sticky` bit is set by executing `ls -ld /tmp`. If the last permission character is `t`, the bit is set.

Another approach is to change the place where the server creates the Unix socket file. If you do this, you should also let client programs know the new location of the file. You can specify the file location in several ways:

- Specify the path in a global or local option file. For example, put the following lines in `/etc/my.cnf`:

  ```
  [mysqld]
  socket=/path/to/socket

  [client]
  socket=/path/to/socket
  ```

  See Section 4.2.6, “Using Option Files”.

- Specify a `--socket` option on the command line to `mysqld_safe` and when you run client programs.
- Set the `MYSQL_UNIX_PORT` environment variable to the path of the Unix socket file.
- Recompile MySQL from source to use a different default Unix socket file location. Define the path to the file with the `MYSQL_UNIX_ADDR` option when you run `CMake`. See Section 2.8.4, “MySQL Source-Configuration Options”.

You can test whether the new socket location works by attempting to connect to the server with this command:

```
shell> mysqladmin --socket=/path/to/socket version
```

B.5.3.7 Time Zone Problems

If you have a problem with `SELECT NOW()` returning values in UTC and not your local time, you have to tell the server your current time zone. The same applies if `UNIX_TIMESTAMP()` returns the wrong value. This should be done for the environment in which the server runs; for example, in `mysqld_safe` or `mysql.server`. See Section 4.9, “MySQL Program Environment Variables”.

You can set the time zone for the server with the `--timezone=`*`timezone_name`* option to `mysqld_safe`. You can also set it by setting the `TZ` environment variable before you start `mysqld`.

The permissible values for `--timezone` or `TZ` are system dependent. Consult your operating system documentation to see what values are acceptable.

B.5.4 Query-Related Issues

B.5.4.1 Case Sensitivity in String Searches

For nonbinary strings (`CHAR`, `VARCHAR`, `TEXT`), string searches use the collation of the comparison operands. For binary strings (`BINARY`, `VARBINARY`, `BLOB`), comparisons use the numeric values of the bytes in the operands; this means that for alphabetic characters, comparisons will be case-sensitive.

A comparison between a nonbinary string and binary string is treated as a comparison of binary strings.

Simple comparison operations (`>=, >, =, <, <=`, sorting, and grouping) are based on each character's “sort value.” Characters with the same sort value are treated as the same character. For example, if `e` and `é` have the same sort value in a given collation, they compare as equal.

The default character set and collation are `utf8mb4` and `utf8mb4_0900_ai_ci`, so nonbinary string comparisons are case insensitive by default. This means that if you search with *`col_name`* `LIKE 'a%'`, you get all column values that start with `A` or `a`. To make this search case-sensitive, make sure that one of the operands has a case-sensitive or binary collation. For example, if you are comparing a column and a string that both have the `utf8mb4` character set, you can use the `COLLATE` operator to cause either operand to have the `utf8mb4_0900_as_cs` or `utf8mb4_bin` collation:

```
col_name COLLATE utf8mb4_0900_as_cs LIKE 'a%'
col_name LIKE 'a%' COLLATE utf8mb4_0900_as_cs
col_name COLLATE utf8mb4_bin LIKE 'a%'
col_name LIKE 'a%' COLLATE utf8mb4_bin
```

If you want a column always to be treated in case-sensitive fashion, declare it with a case-sensitive or binary collation. See Section 13.1.18, “CREATE TABLE Syntax”.

To cause a case-sensitive comparison of nonbinary strings to be case insensitive, use `COLLATE` to name a case-insensitive collation. The strings in the following example normally are case-sensitive, but `COLLATE` changes the comparison to be case insensitive:

```
mysql> SET NAMES 'utf8mb4';
mysql> SET @s1 = 'MySQL' COLLATE utf8mb4_bin,
           @s2 = 'mysql' COLLATE utf8mb4_bin;
mysql> SELECT @s1 = @s2;
+-----------+
| @s1 = @s2 |
+-----------+
|         0 |
+-----------+
mysql> SELECT @s1 COLLATE utf8mb4_0900_ai_ci = @s2;
+--------------------------------------+
| @s1 COLLATE utf8mb4_0900_ai_ci = @s2 |
+--------------------------------------+
|                                    1 |
+--------------------------------------+
```

A binary string is case-sensitive in comparisons. To compare the string as case insensitive, convert it to a nonbinary string and use `COLLATE` to name a case-insensitive collation:

```
mysql> SET @s = BINARY 'MySQL';
mysql> SELECT @s = 'mysql';
+--------------+
| @s = 'mysql' |
+--------------+
|            0 |
+--------------+
mysql> SELECT CONVERT(@s USING utf8mb4) COLLATE utf8mb4_0900_ai_ci = 'mysql';
+-------------------------------------------------------------------+
| CONVERT(@s USING utf8mb4) COLLATE utf8mb4_0900_ai_ci = 'mysql' |
+-------------------------------------------------------------------+
|                                                                 1 |
+-------------------------------------------------------------------+
```

To determine whether a value will compare as a nonbinary or binary string, use the `COLLATION()` function. This example shows that `VERSION()` returns a string that has a case-insensitive collation, so comparisons are case insensitive:

```
mysql> SELECT COLLATION(VERSION());
+----------------------+
| COLLATION(VERSION()) |
+----------------------+
```

```
| utf8_general_ci      |
+----------------------+
```

For binary strings, the collation value is `binary`, so comparisons will be case sensitive. One context in which you will see `binary` is for compression functions, which return binary strings as a general rule: string:

```
mysql> SELECT COLLATION(COMPRESS('x'));
+--------------------------+
| COLLATION(COMPRESS('x')) |
+--------------------------+
| binary                   |
+--------------------------+
```

To check the sort value of a string, the `WEIGHT_STRING()` may be helpful. See Section 12.5, “String Functions”.

B.5.4.2 Problems Using DATE Columns

The format of a `DATE` value is `'YYYY-MM-DD'`. According to standard SQL, no other format is permitted. You should use this format in `UPDATE` expressions and in the `WHERE` clause of `SELECT` statements. For example:

```
SELECT * FROM t1 WHERE date >= '2003-05-05';
```

As a convenience, MySQL automatically converts a date to a number if the date is used in a numeric context and vice versa. MySQL also permits a “relaxed” string format when updating and in a `WHERE` clause that compares a date to a `DATE`, `DATETIME`, or `TIMESTAMP` column. “Relaxed” format means that any punctuation character may be used as the separator between parts. For example, `'2004-08-15'` and `'2004#08#15'` are equivalent. MySQL can also convert a string containing no separators (such as `'20040815'`), provided it makes sense as a date.

When you compare a `DATE`, `TIME`, `DATETIME`, or `TIMESTAMP` to a constant string with the `<`, `<=`, `=`, `>=`, `>`, or `BETWEEN` operators, MySQL normally converts the string to an internal long integer for faster comparison (and also for a bit more “relaxed” string checking). However, this conversion is subject to the following exceptions:

- When you compare two columns
- When you compare a `DATE`, `TIME`, `DATETIME`, or `TIMESTAMP` column to an expression
- When you use any comparison method other than those just listed, such as `IN` or `STRCMP()`.

For those exceptions, the comparison is done by converting the objects to strings and performing a string comparison.

To be on the safe side, assume that strings are compared as strings and use the appropriate string functions if you want to compare a temporal value to a string.

The special “zero” date `'0000-00-00'` can be stored and retrieved as `'0000-00-00'`. When a `'0000-00-00'` date is used through Connector/ODBC, it is automatically converted to `NULL` because ODBC cannot handle that kind of date.

Because MySQL performs the conversions just described, the following statements work (assume that `idate` is a `DATE` column):

```
INSERT INTO t1 (idate) VALUES (19970505);
INSERT INTO t1 (idate) VALUES ('19970505');
INSERT INTO t1 (idate) VALUES ('97-05-05');
INSERT INTO t1 (idate) VALUES ('1997.05.05');
INSERT INTO t1 (idate) VALUES ('1997 05 05');
```

```
INSERT INTO t1 (idate) VALUES ('0000-00-00');

SELECT idate FROM t1 WHERE idate >= '1997-05-05';
SELECT idate FROM t1 WHERE idate >= 19970505;
SELECT MOD(idate,100) FROM t1 WHERE idate >= 19970505;
SELECT idate FROM t1 WHERE idate >= '19970505';
```

However, the following statement does not work:

```
SELECT idate FROM t1 WHERE STRCMP(idate,'20030505')=0;
```

`STRCMP()` is a string function, so it converts `idate` to a string in `'YYYY-MM-DD'` format and performs a string comparison. It does not convert `'20030505'` to the date `'2003-05-05'` and perform a date comparison.

If you enable the `ALLOW_INVALID_DATES` SQL mode, MySQL permits you to store dates that are given only limited checking: MySQL requires only that the day is in the range from 1 to 31 and the month is in the range from 1 to 12. This makes MySQL very convenient for Web applications where you obtain year, month, and day in three different fields and you want to store exactly what the user inserted (without date validation).

MySQL permits you to store dates where the day or month and day are zero. This is convenient if you want to store a birthdate in a `DATE` column and you know only part of the date. To disallow zero month or day parts in dates, enable the `NO_ZERO_IN_DATE` mode.

MySQL permits you to store a “zero” value of `'0000-00-00'` as a “dummy date.” This is in some cases more convenient than using `NULL` values. If a date to be stored in a `DATE` column cannot be converted to any reasonable value, MySQL stores `'0000-00-00'`. To disallow `'0000-00-00'`, enable the `NO_ZERO_DATE` mode.

To have MySQL check all dates and accept only legal dates (unless overridden by `IGNORE`), set the `sql_mode` system variable to `"NO_ZERO_IN_DATE,NO_ZERO_DATE"`.

B.5.4.3 Problems with NULL Values

The concept of the `NULL` value is a common source of confusion for newcomers to SQL, who often think that `NULL` is the same thing as an empty string `''`. This is not the case. For example, the following statements are completely different:

```
mysql> INSERT INTO my_table (phone) VALUES (NULL);
mysql> INSERT INTO my_table (phone) VALUES ('');
```

Both statements insert a value into the `phone` column, but the first inserts a `NULL` value and the second inserts an empty string. The meaning of the first can be regarded as “phone number is not known” and the meaning of the second can be regarded as “the person is known to have no phone, and thus no phone number.”

To help with `NULL` handling, you can use the `IS NULL` and `IS NOT NULL` operators and the `IFNULL()` function.

In SQL, the `NULL` value is never true in comparison to any other value, even `NULL`. An expression that contains `NULL` always produces a `NULL` value unless otherwise indicated in the documentation for the operators and functions involved in the expression. All columns in the following example return `NULL`:

```
mysql> SELECT NULL, 1+NULL, CONCAT('Invisible',NULL);
```

To search for column values that are `NULL`, you cannot use an `expr = NULL` test. The following statement returns no rows, because `expr = NULL` is never true for any expression:

```
```

```
mysql> SELECT * FROM my_table WHERE phone = NULL;
```

To look for `NULL` values, you must use the `IS NULL` test. The following statements show how to find the `NULL` phone number and the empty phone number:

```
mysql> SELECT * FROM my_table WHERE phone IS NULL;
mysql> SELECT * FROM my_table WHERE phone = '';
```

See Section 3.3.4.6, “Working with NULL Values”, for additional information and examples.

You can add an index on a column that can have `NULL` values if you are using the `MyISAM`, `InnoDB`, or `MEMORY` storage engine. Otherwise, you must declare an indexed column `NOT NULL`, and you cannot insert `NULL` into the column.

When reading data with `LOAD DATA INFILE`, empty or missing columns are updated with `''`. To load a `NULL` value into a column, use `\N` in the data file. The literal word `NULL` may also be used under some circumstances. See Section 13.2.7, “LOAD DATA INFILE Syntax”.

When using `DISTINCT`, `GROUP BY`, or `ORDER BY`, all `NULL` values are regarded as equal.

When using `ORDER BY`, `NULL` values are presented first, or last if you specify `DESC` to sort in descending order.

Aggregate (summary) functions such as `COUNT()`, `MIN()`, and `SUM()` ignore `NULL` values. The exception to this is `COUNT(*)`, which counts rows and not individual column values. For example, the following statement produces two counts. The first is a count of the number of rows in the table, and the second is a count of the number of non-`NULL` values in the `age` column:

```
mysql> SELECT COUNT(*), COUNT(age) FROM person;
```

For some data types, MySQL handles `NULL` values specially. If you insert `NULL` into a `TIMESTAMP` column, the current date and time is inserted. If you insert `NULL` into an integer or floating-point column that has the `AUTO_INCREMENT` attribute, the next number in the sequence is inserted.

B.5.4.4 Problems with Column Aliases

An alias can be used in a query select list to give a column a different name. You can use the alias in `GROUP BY`, `ORDER BY`, or `HAVING` clauses to refer to the column:

```
SELECT SQRT(a*b) AS root FROM tbl_name
  GROUP BY root HAVING root > 0;
SELECT id, COUNT(*) AS cnt FROM tbl_name
  GROUP BY id HAVING cnt > 0;
SELECT id AS 'Customer identity' FROM tbl_name;
```

Standard SQL disallows references to column aliases in a `WHERE` clause. This restriction is imposed because when the `WHERE` clause is evaluated, the column value may not yet have been determined. For example, the following query is illegal:

```
SELECT id, COUNT(*) AS cnt FROM tbl_name
  WHERE cnt > 0 GROUP BY id;
```

The `WHERE` clause determines which rows should be included in the `GROUP BY` clause, but it refers to the alias of a column value that is not known until after the rows have been selected, and grouped by the `GROUP BY`.

In the select list of a query, a quoted column alias can be specified using identifier or string quoting characters:

```
```

```
SELECT 1 AS `one`, 2 AS 'two';
```

Elsewhere in the statement, quoted references to the alias must use identifier quoting or the reference is treated as a string literal. For example, this statement groups by the values in column `id`, referenced using the alias `` `a` ``:

```
SELECT id AS 'a', COUNT(*) AS cnt FROM tbl_name
  GROUP BY `a`;
```

But this statement groups by the literal string `'a'` and will not work as expected:

```
SELECT id AS 'a', COUNT(*) AS cnt FROM tbl_name
  GROUP BY 'a';
```

B.5.4.5 Rollback Failure for Nontransactional Tables

If you receive the following message when trying to perform a `ROLLBACK`, it means that one or more of the tables you used in the transaction do not support transactions:

```
Warning: Some non-transactional changed tables couldn't be rolled back
```

These nontransactional tables are not affected by the `ROLLBACK` statement.

If you were not deliberately mixing transactional and nontransactional tables within the transaction, the most likely cause for this message is that a table you thought was transactional actually is not. This can happen if you try to create a table using a transactional storage engine that is not supported by your `mysqld` server (or that was disabled with a startup option). If `mysqld` does not support a storage engine, it instead creates the table as a `MyISAM` table, which is nontransactional.

You can check the storage engine for a table by using either of these statements:

```
SHOW TABLE STATUS LIKE 'tbl_name';
SHOW CREATE TABLE tbl_name;
```

See Section 13.7.6.36, “SHOW TABLE STATUS Syntax”, and Section 13.7.6.10, “SHOW CREATE TABLE Syntax”.

To check which storage engines your `mysqld` server supports, use this statement:

```
SHOW ENGINES;
```

See Section 13.7.6.16, “SHOW ENGINES Syntax” for full details.

B.5.4.6 Deleting Rows from Related Tables

If the total length of the `DELETE` statement for `related_table` is more than the default value of the `max_allowed_packet` system variable, you should split it into smaller parts and execute multiple `DELETE` statements. You probably get the fastest `DELETE` by specifying only 100 to 1,000 `related_column` values per statement if the `related_column` is indexed. If the `related_column` isn't indexed, the speed is independent of the number of arguments in the `IN` clause.

B.5.4.7 Solving Problems with No Matching Rows

If you have a complicated query that uses many tables but that returns no rows, you should use the following procedure to find out what is wrong:

1. Test the query with `EXPLAIN` to check whether you can find something that is obviously wrong. See Section 13.8.2, “EXPLAIN Syntax”.

2. Select only those columns that are used in the `WHERE` clause.

3. Remove one table at a time from the query until it returns some rows. If the tables are large, it is a good idea to use `LIMIT 10` with the query.

4. Issue a `SELECT` for the column that should have matched a row against the table that was last removed from the query.

5. If you are comparing `FLOAT` or `DOUBLE` columns with numbers that have decimals, you cannot use equality (`=`) comparisons. This problem is common in most computer languages because not all floating-point values can be stored with exact precision. In some cases, changing the `FLOAT` to a `DOUBLE` fixes this. See Section B.5.4.8, “Problems with Floating-Point Values”.

6. If you still cannot figure out what is wrong, create a minimal test that can be run with `mysql test < query.sql` that shows your problems. You can create a test file by dumping the tables with `mysqldump --quick db_name tbl_name_1 ... tbl_name_n > query.sql`. Open the file in an editor, remove some insert lines (if there are more than needed to demonstrate the problem), and add your `SELECT` statement at the end of the file.

   Verify that the test file demonstrates the problem by executing these commands:

   ```
   shell> mysqladmin create test2
   shell> mysql test2 < query.sql
   ```

   Attach the test file to a bug report, which you can file using the instructions in Section 1.7, “How to Report Bugs or Problems”.

B.5.4.8 Problems with Floating-Point Values

Floating-point numbers sometimes cause confusion because they are approximate and not stored as exact values. A floating-point value as written in an SQL statement may not be the same as the value represented internally. Attempts to treat floating-point values as exact in comparisons may lead to problems. They are also subject to platform or implementation dependencies. The `FLOAT` and `DOUBLE` data types are subject to these issues. For `DECIMAL` columns, MySQL performs operations with a precision of 65 decimal digits, which should solve most common inaccuracy problems.

The following example uses `DOUBLE` to demonstrate how calculations that are done using floating-point operations are subject to floating-point error.

```
mysql> CREATE TABLE t1 (i INT, d1 DOUBLE, d2 DOUBLE);
mysql> INSERT INTO t1 VALUES (1, 101.40, 21.40), (1, -80.00, 0.00),
    -> (2, 0.00, 0.00), (2, -13.20, 0.00), (2, 59.60, 46.40),
    -> (2, 30.40, 30.40), (3, 37.00, 7.40), (3, -29.60, 0.00),
    -> (4, 60.00, 15.40), (4, -10.60, 0.00), (4, -34.00, 0.00),
    -> (5, 33.00, 0.00), (5, -25.80, 0.00), (5, 0.00, 7.20),
    -> (6, 0.00, 0.00), (6, -51.40, 0.00);

mysql> SELECT i, SUM(d1) AS a, SUM(d2) AS b
    -> FROM t1 GROUP BY i HAVING a <> b;

+------+-------+------+
| i    | a     | b    |
+------+-------+------+
|    1 |  21.4 | 21.4 |
|    2 |  76.8 | 76.8 |
|    3 |   7.4 |  7.4 |
|    4 |  15.4 | 15.4 |
|    5 |   7.2 |  7.2 |
|    6 | -51.4 |    0 |
+------+-------+------+
```

The result is correct. Although the first five records look like they should not satisfy the comparison (the values of `a` and `b` do not appear to be different), they may do so because the difference between

the numbers shows up around the tenth decimal or so, depending on factors such as computer architecture or the compiler version or optimization level. For example, different CPUs may evaluate floating-point numbers differently.

If columns `d1` and `d2` had been defined as `DECIMAL` rather than `DOUBLE`, the result of the `SELECT` query would have contained only one row—the last one shown above.

The correct way to do floating-point number comparison is to first decide on an acceptable tolerance for differences between the numbers and then do the comparison against the tolerance value. For example, if we agree that floating-point numbers should be regarded the same if they are same within a precision of one in ten thousand (0.0001), the comparison should be written to find differences larger than the tolerance value:

```
mysql> SELECT i, SUM(d1) AS a, SUM(d2) AS b FROM t1
    -> GROUP BY i HAVING ABS(a - b) > 0.0001;
+------+-------+------+
| i    | a     | b    |
+------+-------+------+
|    6 | -51.4 |    0 |
+------+-------+------+
1 row in set (0.00 sec)
```

Conversely, to get rows where the numbers are the same, the test should find differences within the tolerance value:

```
mysql> SELECT i, SUM(d1) AS a, SUM(d2) AS b FROM t1
    -> GROUP BY i HAVING ABS(a - b) <= 0.0001;
+------+------+------+
| i    | a    | b    |
+------+------+------+
|    1 | 21.4 | 21.4 |
|    2 | 76.8 | 76.8 |
|    3 |  7.4 |  7.4 |
|    4 | 15.4 | 15.4 |
|    5 |  7.2 |  7.2 |
+------+------+------+
5 rows in set (0.03 sec)
```

Floating-point values are subject to platform or implementation dependencies. Suppose that you execute the following statements:

```
CREATE TABLE t1(c1 FLOAT(53,0), c2 FLOAT(53,0));
INSERT INTO t1 VALUES('1e+52','-1e+52');
SELECT * FROM t1;
```

On some platforms, the `SELECT` statement returns `inf` and `-inf`. On others, it returns `0` and `-0`.

An implication of the preceding issues is that if you attempt to create a replication slave by dumping table contents with `mysqldump` on the master and reloading the dump file into the slave, tables containing floating-point columns might differ between the two hosts.

B.5.5 Optimizer-Related Issues

MySQL uses a cost-based optimizer to determine the best way to resolve a query. In many cases, MySQL can calculate the best possible query plan, but sometimes MySQL does not have enough information about the data at hand and has to make “educated” guesses about the data.

For the cases when MySQL does not do the "right" thing, tools that you have available to help MySQL are:

- Use the `EXPLAIN` statement to get information about how MySQL processes a query. To use it, just add the keyword `EXPLAIN` to the front of your `SELECT` statement:

```
mysql> EXPLAIN SELECT * FROM t1, t2 WHERE t1.i = t2.i;
```

`EXPLAIN` is discussed in more detail in Section 13.8.2, “EXPLAIN Syntax”.

- Use `ANALYZE TABLE tbl_name` to update the key distributions for the scanned table. See Section 13.7.3.1, “ANALYZE TABLE Syntax”.
- Use `FORCE INDEX` for the scanned table to tell MySQL that table scans are very expensive compared to using the given index:

```
SELECT * FROM t1, t2 FORCE INDEX (index_for_column)
WHERE t1.col_name=t2.col_name;
```

`USE INDEX` and `IGNORE INDEX` may also be useful. See Section 8.9.4, “Index Hints”.

- Global and table-level `STRAIGHT_JOIN`. See Section 13.2.10, “SELECT Syntax”.
- You can tune global or thread-specific system variables. For example, start `mysqld` with the `--max-seeks-for-key=1000` option or use `SET max_seeks_for_key=1000` to tell the optimizer to assume that no key scan causes more than 1,000 key seeks. See Section 5.1.7, “Server System Variables”.

B.5.6 Table Definition-Related Issues

B.5.6.1 Problems with ALTER TABLE

If you get a duplicate-key error when using `ALTER TABLE` to change the character set or collation of a character column, the cause is either that the new column collation maps two keys to the same value or that the table is corrupted. In the latter case, you should run `REPAIR TABLE` on the table. `REPAIR TABLE` works for `MyISAM`, `ARCHIVE`, and `CSV` tables.

If you use `ALTER TABLE` on a transactional table or if you are using Windows, `ALTER TABLE` unlocks the table if you had done a `LOCK TABLE` on it. This is done because `InnoDB` and these operating systems cannot drop a table that is in use.

B.5.6.2 TEMPORARY Table Problems

Temporary tables created with `CREATE TEMPORARY TABLE` have the following limitations:

- `TEMPORARY` tables are supported only by the `InnoDB`, `MEMORY`, `MyISAM`, and `MERGE` storage engines.
- The `SHOW TABLES` statement does not list `TEMPORARY` tables.
- You cannot use `RENAME TABLE` to rename a `TEMPORARY` table. However, you can use `ALTER TABLE` instead:

```
ALTER TABLE old_name RENAME new_name;
```

- You cannot refer to a `TEMPORARY` table more than once in the same query. For example, the following does not work:

```
SELECT * FROM temp_table JOIN temp_table AS t2;
```

The statement produces this error:

```
ERROR 1137: Can't reopen table: 'temp_table'
```

You can work around this issue if your query permits use of a common table expression (CTE) rather than a `TEMPORARY` table. For example, this fails with the `Can't reopen table` error:

```
CREATE TEMPORARY TABLE t SELECT 1 AS col_a, 2 AS col_b;
SELECT * FROM t AS t1 JOIN t AS t2;
```

To avoid the error, use a `WITH` clause that defines a CTE, rather than the `TEMPORARY` table:

```
WITH cte AS (SELECT 1 AS col_a, 2 AS col_b)
SELECT * FROM cte AS t1 JOIN cte AS t2;
```

- The `Can't reopen table` error also occurs if you refer to a temporary table multiple times in a stored function under different aliases, even if the references occur in different statements within the function. It may occur for temporary tables created outside stored functions and referred to across multiple calling and callee functions.
- There are known issues in using temporary tables with replication. See Section 17.4.1.31, “Replication and Temporary Tables”, for more information.

B.5.7 Known Issues in MySQL

This section lists known issues in recent versions of MySQL.

For information about platform-specific issues, see the installation and porting instructions in Section 2.1, “General Installation Guidance”, and Section 28.5, “Debugging and Porting MySQL”.

The following problems are known:

- Subquery optimization for `IN` is not as effective as for `=`.
- Even if you use `lower_case_table_names=2` (which enables MySQL to remember the case used for databases and table names), MySQL does not remember the case used for database names for the function `DATABASE()` or within the various logs (on case-insensitive systems).
- Dropping a `FOREIGN KEY` constraint does not work in replication because the constraint may have another name on the slave.
- `REPLACE` (and `LOAD DATA` with the `REPLACE` option) does not trigger `ON DELETE CASCADE`.
- `DISTINCT` with `ORDER BY` does not work inside `GROUP_CONCAT()` if you do not use all and only those columns that are in the `DISTINCT` list.
- When inserting a big integer value (between 2^{63} and $2^{64}-1$) into a decimal or string column, it is inserted as a negative value because the number is evaluated in a signed integer context.
- With statement-based binary logging, the master writes the executed queries to the binary log. This is a very fast, compact, and efficient logging method that works perfectly in most cases. However, it is possible for the data on the master and slave to become different if a query is designed in such a way that the data modification is nondeterministic (generally not a recommended practice, even outside of replication).

  For example:

  - `CREATE TABLE ... SELECT` or `INSERT ... SELECT` statements that insert zero or `NULL` values into an `AUTO_INCREMENT` column.
  - `DELETE` if you are deleting rows from a table that has foreign keys with `ON DELETE CASCADE` properties.
  - `REPLACE ... SELECT`, `INSERT IGNORE ... SELECT` if you have duplicate key values in the inserted data.

If and only if the preceding queries have no `ORDER BY` clause guaranteeing a deterministic order.

For example, for `INSERT ... SELECT` with no `ORDER BY`, the `SELECT` may return rows in a different order (which results in a row having different ranks, hence getting a different number in the `AUTO_INCREMENT` column), depending on the choices made by the optimizers on the master and slave.

A query is optimized differently on the master and slave only if:

- The table is stored using a different storage engine on the master than on the slave. (It is possible to use different storage engines on the master and slave. For example, you can use `InnoDB` on the master, but `MyISAM` on the slave if the slave has less available disk space.)
- MySQL buffer sizes (`key_buffer_size`, and so on) are different on the master and slave.
- The master and slave run different MySQL versions, and the optimizer code differs between these versions.

This problem may also affect database restoration using `mysqlbinlog|mysql`.

The easiest way to avoid this problem is to add an `ORDER BY` clause to the aforementioned nondeterministic queries to ensure that the rows are always stored or modified in the same order. Using row-based or mixed logging format also avoids the problem.

- Log file names are based on the server host name if you do not specify a file name with the startup option. To retain the same log file names if you change your host name to something else, you must explicitly use options such as `--log-bin=`*`old_host_name`*`-bin`. See Section 5.1.6, “Server Command Options”. Alternatively, rename the old files to reflect your host name change. If these are binary logs, you must edit the binary log index file and fix the binary log file names there as well. (The same is true for the relay logs on a slave server.)
- `mysqlbinlog` does not delete temporary files left after a `LOAD DATA INFILE` statement. See Section 4.6.8, “`mysqlbinlog` — Utility for Processing Binary Log Files”.
- `RENAME` does not work with `TEMPORARY` tables or tables used in a `MERGE` table.
- When using `SET CHARACTER SET`, you cannot use translated characters in database, table, and column names.
- You cannot use `_` or `%` with `ESCAPE` in `LIKE ... ESCAPE`.
- The server uses only the first `max_sort_length` bytes when comparing data values. This means that values cannot reliably be used in `GROUP BY`, `ORDER BY`, or `DISTINCT` if they differ only after the first `max_sort_length` bytes. To work around this, increase the variable value. The default value of `max_sort_length` is 1024 and can be changed at server startup time or at runtime.
- Numeric calculations are done with `BIGINT` or `DOUBLE` (both are normally 64 bits long). Which precision you get depends on the function. The general rule is that bit functions are performed with `BIGINT` precision, `IF()` and `ELT()` with `BIGINT` or `DOUBLE` precision, and the rest with `DOUBLE` precision. You should try to avoid using unsigned long long values if they resolve to be larger than 63 bits (9223372036854775807) for anything other than bit fields.
- You can have up to 255 `ENUM` and `SET` columns in one table.
- In `MIN()`, `MAX()`, and other aggregate functions, MySQL currently compares `ENUM` and `SET` columns by their string value rather than by the string's relative position in the set.
- In an `UPDATE` statement, columns are updated from left to right. If you refer to an updated column, you get the updated value instead of the original value. For example, the following statement increments `KEY` by `2`, **not** `1`:

```
mysql> UPDATE tbl_name SET KEY=KEY+1,KEY=KEY+1;
```

- You can refer to multiple temporary tables in the same query, but you cannot refer to any given temporary table more than once. For example, the following does not work:

```
mysql> SELECT * FROM temp_table, temp_table AS t2;
ERROR 1137: Can't reopen table: 'temp_table'
```

- The optimizer may handle `DISTINCT` differently when you are using “hidden” columns in a join than when you are not. In a join, hidden columns are counted as part of the result (even if they are not shown), whereas in normal queries, hidden columns do not participate in the `DISTINCT` comparison.

  An example of this is:

```
SELECT DISTINCT mp3id FROM band_downloads
       WHERE userid = 9 ORDER BY id DESC;
```

  and

```
SELECT DISTINCT band_downloads.mp3id
       FROM band_downloads,band_mp3
       WHERE band_downloads.userid = 9
       AND band_mp3.id = band_downloads.mp3id
       ORDER BY band_downloads.id DESC;
```

  In the second case, you may get two identical rows in the result set (because the values in the hidden `id` column may differ).

  Note that this happens only for queries that do not have the `ORDER BY` columns in the result.

- If you execute a `PROCEDURE` on a query that returns an empty set, in some cases the `PROCEDURE` does not transform the columns.

- Creation of a table of type `MERGE` does not check whether the underlying tables are compatible types.

- If you use `ALTER TABLE` to add a `UNIQUE` index to a table used in a `MERGE` table and then add a normal index on the `MERGE` table, the key order is different for the tables if there was an old, non-`UNIQUE` key in the table. This is because `ALTER TABLE` puts `UNIQUE` indexes before normal indexes to be able to detect duplicate keys as early as possible.

The discussion here describes restrictions that apply to the use of MySQL features such as subqueries or views.

C.1 Restrictions on Stored Programs

These restrictions apply to the features described in Chapter 23, *Stored Programs and Views*.

Some of the restrictions noted here apply to all stored routines; that is, both to stored procedures and stored functions. There are also some restrictions specific to stored functions but not to stored procedures.

The restrictions for stored functions also apply to triggers. There are also some restrictions specific to triggers.

The restrictions for stored procedures also apply to the `DO` clause of Event Scheduler event definitions. There are also some restrictions specific to events.

SQL Statements Not Permitted in Stored Routines

Stored routines cannot contain arbitrary SQL statements. The following statements are not permitted:

- The locking statements `LOCK TABLES` and `UNLOCK TABLES`.
- `ALTER VIEW`.
- `LOAD DATA` and `LOAD TABLE`.
- SQL prepared statements (`PREPARE`, `EXECUTE`, `DEALLOCATE PREPARE`) can be used in stored procedures, but not stored functions or triggers. Thus, stored functions and triggers cannot use dynamic SQL (where you construct statements as strings and then execute them).
- Generally, statements not permitted in SQL prepared statements are also not permitted in stored programs. For a list of statements supported as prepared statements, see Section 13.5, “Prepared SQL Statement Syntax”. Exceptions are `SIGNAL`, `RESIGNAL`, and `GET DIAGNOSTICS`, which are not permissible as prepared statements but are permitted in stored programs.
- Because local variables are in scope only during stored program execution, references to them are not permitted in prepared statements created within a stored program. Prepared statement scope is the current session, not the stored program, so the statement could be executed after the

program ends, at which point the variables would no longer be in scope. For example, `SELECT ... INTO local_var` cannot be used as a prepared statement. This restriction also applies to stored procedure and function parameters. See Section 13.5.1, “PREPARE Syntax”.

- Within all stored programs (stored procedures and functions, triggers, and events), the parser treats `BEGIN [WORK]` as the beginning of a `BEGIN ... END` block. To begin a transaction in this context, use `START TRANSACTION` instead.

Restrictions for Stored Functions

The following additional statements or operations are not permitted within stored functions. They are permitted within stored procedures, except stored procedures that are invoked from within a stored function or trigger. For example, if you use `FLUSH` in a stored procedure, that stored procedure cannot be called from a stored function or trigger.

- Statements that perform explicit or implicit commit or rollback. Support for these statements is not required by the SQL standard, which states that each DBMS vendor may decide whether to permit them.
- Statements that return a result set. This includes `SELECT` statements that do not have an `INTO var_list` clause and other statements such as `SHOW`, `EXPLAIN`, and `CHECK TABLE`. A function can process a result set either with `SELECT ... INTO var_list` or by using a cursor and `FETCH` statements. See Section 13.2.10.1, “SELECT ... INTO Syntax”, and Section 13.6.6, “Cursors”.
- `FLUSH` statements.
- Stored functions cannot be used recursively.
- A stored function or trigger cannot modify a table that is already being used (for reading or writing) by the statement that invoked the function or trigger.
- If you refer to a temporary table multiple times in a stored function under different aliases, a `Can't reopen table: 'tbl_name'` error occurs, even if the references occur in different statements within the function.
- `HANDLER ... READ` statements that invoke stored functions can cause replication errors and are disallowed.

Restrictions for Triggers

For triggers, the following additional restrictions apply:

- Triggers are not activated by foreign key actions.
- When using row-based replication, triggers on the slave are not activated by statements originating on the master. The triggers on the slave are activated when using statement-based replication. For more information, see Section 17.4.1.36, “Replication and Triggers”.
- The `RETURN` statement is not permitted in triggers, which cannot return a value. To exit a trigger immediately, use the `LEAVE` statement.
- Triggers are not permitted on tables in the `mysql` database. Nor are they permitted on `INFORMATION_SCHEMA` or `performance_schema` tables. Those tables are actually views and triggers are not permitted on views.
- The trigger cache does not detect when metadata of the underlying objects has changed. If a trigger uses a table and the table has changed since the trigger was loaded into the cache, the trigger operates using the outdated metadata.

Name Conflicts within Stored Routines

The same identifier might be used for a routine parameter, a local variable, and a table column. Also, the same local variable name can be used in nested blocks. For example:

```
CREATE PROCEDURE p (i INT)
BEGIN
  DECLARE i INT DEFAULT 0;
  SELECT i FROM t;
  BEGIN
    DECLARE i INT DEFAULT 1;
    SELECT i FROM t;
  END;
END;
```

In such cases, the identifier is ambiguous and the following precedence rules apply:

- A local variable takes precedence over a routine parameter or table column.
- A routine parameter takes precedence over a table column.
- A local variable in an inner block takes precedence over a local variable in an outer block.

The behavior that variables take precedence over table columns is nonstandard.

Replication Considerations

Use of stored routines can cause replication problems. This issue is discussed further in Section 23.7, “Binary Logging of Stored Programs”.

The `--replicate-wild-do-table=db_name.tbl_name` option applies to tables, views, and triggers. It does not apply to stored procedures and functions, or events. To filter statements operating on the latter objects, use one or more of the `--replicate-*-db` options.

Debugging Considerations

There are no stored routine debugging facilities.

Unsupported Syntax from the SQL:2003 Standard

The MySQL stored routine syntax is based on the SQL:2003 standard. The following items from that standard are not currently supported:

- `UNDO` handlers
- `FOR` loops

Concurrency Considerations

To prevent problems of interaction between sessions, when a client issues a statement, the server uses a snapshot of routines and triggers available for execution of the statement. That is, the server calculates a list of procedures, functions, and triggers that may be used during execution of the statement, loads them, and then proceeds to execute the statement. While the statement executes, it does not see changes to routines performed by other sessions.

For maximum concurrency, stored functions should minimize their side-effects; in particular, updating a table within a stored function can reduce concurrent operations on that table. A stored function acquires table locks before executing, to avoid inconsistency in the binary log due to mismatch of the order in which statements execute and when they appear in the log. When statement-based binary logging is used, statements that invoke a function are recorded rather than the statements executed within the function. Consequently, stored functions that update the same underlying tables do not execute in parallel. In contrast, stored procedures do not acquire table-level locks. All statements executed within stored procedures are written to the binary log, even for statement-based binary logging. See Section 23.7, “Binary Logging of Stored Programs”.

Event Scheduler Restrictions

The following limitations are specific to the Event Scheduler:

- Event names are handled in case-insensitive fashion. For example, you cannot have two events in the same database with the names `anEvent` and `AnEvent`.
- An event may not be created, altered, or dropped by a stored routine, trigger, or another event. An event also may not create, alter, or drop stored routines or triggers. (Bug #16409, Bug #18896)
- DDL statements on events are prohibited while a `LOCK TABLES` statement is in effect.
- Event timings using the intervals `YEAR`, `QUARTER`, `MONTH`, and `YEAR_MONTH` are resolved in months; those using any other interval are resolved in seconds. There is no way to cause events scheduled to occur at the same second to execute in a given order. In addition—due to rounding, the nature of threaded applications, and the fact that a nonzero length of time is required to create events and to signal their execution—events may be delayed by as much as 1 or 2 seconds. However, the time shown in the `INFORMATION_SCHEMA.EVENTS` table's `LAST_EXECUTED` column or the `mysql.event` table's `last_executed` column is always accurate to within one second of the actual event execution time. (See also Bug #16522.)
- Each execution of the statements contained in the body of an event takes place in a new connection; thus, these statements has no effect in a given user session on the server's statement counts such as `Com_select` and `Com_insert` that are displayed by `SHOW STATUS`. However, such counts *are* updated in the global scope. (Bug #16422)
- Events do not support times later than the end of the Unix Epoch; this is approximately the beginning of the year 2038. Such dates are specifically not permitted by the Event Scheduler. (Bug #16396)
- References to stored functions, user-defined functions, and tables in the `ON SCHEDULE` clauses of `CREATE EVENT` and `ALTER EVENT` statements are not supported. These sorts of references are not permitted. (See Bug #22830 for more information.)

C.2 Restrictions on Condition Handling

`SIGNAL`, `RESIGNAL`, and `GET DIAGNOSTICS` are not permissible as prepared statements. For example, this statement is invalid:

```
PREPARE stmt1 FROM 'SIGNAL SQLSTATE "02000"';
```

`SQLSTATE` values in class `'04'` are not treated specially. They are handled the same as other exceptions.

In standard SQL, the first condition relates to the `SQLSTATE` value returned for the previous SQL statement. In MySQL, this is not guaranteed, so to get the main error, you cannot do this:

```
GET DIAGNOSTICS CONDITION 1 @errno = MYSQL_ERRNO;
```

Instead, do this:

```
GET DIAGNOSTICS @cno = NUMBER;
GET DIAGNOSTICS CONDITION @cno @errno = MYSQL_ERRNO;
```

C.3 Restrictions on Server-Side Cursors

Server-side cursors are implemented in the C API using the `mysql_stmt_attr_set()` function. The same implementation is used for cursors in stored routines. A server-side cursor enables a result set to be generated on the server side, but not transferred to the client except for those rows that the client requests. For example, if a client executes a query but is only interested in the first row, the remaining rows are not transferred.

In MySQL, a server-side cursor is materialized into an internal temporary table. Initially, this is a `MEMORY` table, but is converted to a `MyISAM` table when its size exceeds the minimum value of the `max_heap_table_size` and `tmp_table_size` system variables. The same restrictions apply

to internal temporary tables created to hold the result set for a cursor as for other uses of internal temporary tables. See Section 8.4.4, “Internal Temporary Table Use in MySQL”. One limitation of the implementation is that for a large result set, retrieving its rows through a cursor might be slow.

Cursors are read only; you cannot use a cursor to update rows.

`UPDATE WHERE CURRENT OF` and `DELETE WHERE CURRENT OF` are not implemented, because updatable cursors are not supported.

Cursors are nonholdable (not held open after a commit).

Cursors are asensitive.

Cursors are nonscrollable.

Cursors are not named. The statement handler acts as the cursor ID.

You can have open only a single cursor per prepared statement. If you need several cursors, you must prepare several statements.

You cannot use a cursor for a statement that generates a result set if the statement is not supported in prepared mode. This includes statements such as `CHECK TABLE`, `HANDLER READ`, and `SHOW BINLOG EVENTS`.

C.4 Restrictions on Subqueries

- In general, you cannot modify a table and select from the same table in a subquery. For example, this limitation applies to statements of the following forms:

```
DELETE FROM t WHERE ... (SELECT ... FROM t ...);
UPDATE t ... WHERE col = (SELECT ... FROM t ...);
{INSERT|REPLACE} INTO t (SELECT ... FROM t ...);
```

  Exception: The preceding prohibition does not apply if for the modified table you are using a derived table and that derived table is materialized rather than merged into the outer query. (See Section 8.2.2.3, “Optimizing Derived Tables, View References, and Common Table Expressions”.) Example:

```
UPDATE t ... WHERE col = (SELECT * FROM (SELECT ... FROM t...) AS dt ...);
```

  Here the result from the derived table is materialized as a temporary table, so the relevant rows in `t` have already been selected by the time the update to `t` takes place.

  In general, you may be able to influence the optimizer to materialize a derived table by adding a `NO_MERGE` optimizer hint. See Section 8.9.2, “Optimizer Hints”.

- Row comparison operations are only partially supported:

  - For *`expr [NOT] IN subquery`*, *`expr`* can be an *`n`*-tuple (specified using row constructor syntax) and the subquery can return rows of *`n`*-tuples. The permitted syntax is therefore more specifically expressed as *`row_constructor [NOT] IN table_subquery`*

  - For *`expr op {ALL|ANY|SOME} subquery`*, *`expr`* must be a scalar value and the subquery must be a column subquery; it cannot return multiple-column rows.

  In other words, for a subquery that returns rows of *`n`*-tuples, this is supported:

```
(expr_1, ..., expr_n) [NOT] IN table_subquery
```

  But this is not supported:

```
(expr_1, ..., expr_n) op {ALL|ANY|SOME} subquery
```

The reason for supporting row comparisons for `IN` but not for the others is that `IN` is implemented by rewriting it as a sequence of `=` comparisons and `AND` operations. This approach cannot be used for `ALL`, `ANY`, or `SOME`.

- Subqueries in the `FROM` clause cannot be correlated subqueries. They are materialized in whole (evaluated to produce a result set) during query execution, so they cannot be evaluated per row of the outer query. The optimizer delays materialization until the result is needed, which may permit materialization to be avoided. See Section 8.2.2.3, “Optimizing Derived Tables, View References, and Common Table Expressions”.

- MySQL does not support `LIMIT` in subqueries for certain subquery operators:

```
mysql> SELECT * FROM t1
    ->   WHERE s1 IN (SELECT s2 FROM t2 ORDER BY s1 LIMIT 1);
ERROR 1235 (42000): This version of MySQL doesn't yet support
 'LIMIT & IN/ALL/ANY/SOME subquery'
```

- MySQL permits a subquery to refer to a stored function that has data-modifying side effects such as inserting rows into a table. For example, if `f()` inserts rows, the following query can modify data:

```
SELECT ... WHERE x IN (SELECT f() ...);
```

This behavior is an extension to the SQL standard. In MySQL, it can produce nondeterministic results because `f()` might be executed a different number of times for different executions of a given query depending on how the optimizer chooses to handle it.

For statement-based or mixed-format replication, one implication of this indeterminism is that such a query can produce different results on the master and its slaves.

C.5 Restrictions on Views

View processing is not optimized:

- It is not possible to create an index on a view.

- Indexes can be used for views processed using the merge algorithm. However, a view that is processed with the temptable algorithm is unable to take advantage of indexes on its underlying tables (although indexes can be used during generation of the temporary tables).

There is a general principle that you cannot modify a table and select from the same table in a subquery. See Section C.4, “Restrictions on Subqueries”.

The same principle also applies if you select from a view that selects from the table, if the view selects from the table in a subquery and the view is evaluated using the merge algorithm. Example:

```
CREATE VIEW v1 AS
SELECT * FROM t2 WHERE EXISTS (SELECT 1 FROM t1 WHERE t1.a = t2.a);

UPDATE t1, v2 SET t1.a = 1 WHERE t1.b = v2.b;
```

If the view is evaluated using a temporary table, you *can* select from the table in the view subquery and still modify that table in the outer query. In this case the view will be stored in a temporary table and thus you are not really selecting from the table in a subquery and modifying it “at the same time.” (This is another reason you might wish to force MySQL to use the temptable algorithm by specifying `ALGORITHM = TEMPTABLE` in the view definition.)

You can use `DROP TABLE` or `ALTER TABLE` to drop or alter a table that is used in a view definition. No warning results from the `DROP` or `ALTER` operation, even though this invalidates the view. Instead,

an error occurs later, when the view is used. `CHECK TABLE` can be used to check for views that have been invalidated by `DROP` or `ALTER` operations.

With regard to view updatability, the overall goal for views is that if any view is theoretically updatable, it should be updatable in practice. MySQL as quickly as possible. Many theoretically updatable views can be updated now, but limitations still exist. For details, see Section 23.5.3, “Updatable and Insertable Views”.

There exists a shortcoming with the current implementation of views. If a user is granted the basic privileges necessary to create a view (the `CREATE VIEW` and `SELECT` privileges), that user will be unable to call `SHOW CREATE VIEW` on that object unless the user is also granted the `SHOW VIEW` privilege.

That shortcoming can lead to problems backing up a database with `mysqldump`, which may fail due to insufficient privileges. This problem is described in Bug #22062.

The workaround to the problem is for the administrator to manually grant the `SHOW VIEW` privilege to users who are granted `CREATE VIEW`, since MySQL doesn't grant it implicitly when views are created.

Views do not have indexes, so index hints do not apply. Use of index hints when selecting from a view is not permitted.

`SHOW CREATE VIEW` displays view definitions using an `AS` *`alias_name`* clause for each column. If a column is created from an expression, the default alias is the expression text, which can be quite long. Aliases for column names in `CREATE VIEW` statements are checked against the maximum column length of 64 characters (not the maximum alias length of 256 characters). As a result, views created from the output of `SHOW CREATE VIEW` fail if any column alias exceeds 64 characters. This can cause problems in the following circumstances for views with too-long aliases:

- View definitions fail to replicate to newer slaves that enforce the column-length restriction.
- Dump files created with `mysqldump` cannot be loaded into servers that enforce the column-length restriction.

A workaround for either problem is to modify each problematic view definition to use aliases that provide shorter column names. Then the view will replicate properly, and can be dumped and reloaded without causing an error. To modify the definition, drop and create the view again with `DROP VIEW` and `CREATE VIEW`, or replace the definition with `CREATE OR REPLACE VIEW`.

For problems that occur when reloading view definitions in dump files, another workaround is to edit the dump file to modify its `CREATE VIEW` statements. However, this does not change the original view definitions, which may cause problems for subsequent dump operations.

C.6 Restrictions on XA Transactions

XA transaction support is limited to the `InnoDB` storage engine.

For “external XA,” a MySQL server acts as a Resource Manager and client programs act as Transaction Managers. For “Internal XA”, storage engines within a MySQL server act as RMs, and the server itself acts as a TM. Internal XA support is limited by the capabilities of individual storage engines. Internal XA is required for handling XA transactions that involve more than one storage engine. The implementation of internal XA requires that a storage engine support two-phase commit at the table handler level, and currently this is true only for `InnoDB`.

For `XA START`, the `JOIN` and `RESUME` clauses are not supported.

For `XA END`, the `SUSPEND [FOR MIGRATE]` clause is not supported.

The requirement that the *`bqual`* part of the *`xid`* value be different for each XA transaction within a global transaction is a limitation of the current MySQL XA implementation. It is not part of the XA specification.

An XA transaction is written to the binary log in two parts. When `XA PREPARE` is issued, the first part of the transaction up to `XA PREPARE` is written using an initial GTID. A `XA_prepare_log_event` is used to identify such transactions in the binary log. When `XA COMMIT` or `XA ROLLBACK` is issued, a second part of the transaction containing only the `XA COMMIT` or `XA ROLLBACK` statement is written using a second GTID. Note that the initial part of the transaction, identified by `XA_prepare_log_event`, is not necessarily followed by its `XA COMMIT` or `XA ROLLBACK`, which can cause interleaved binary logging of any two XA transactions. The two parts of the XA transaction can even appear in different binary log files. This means that an XA transaction in `PREPARED` state is now persistent until an explicit `XA COMMIT` or `XA ROLLBACK` statement is issued, ensuring that XA transactions are compatible with replication.

On a replication slave, immediately after the XA transaction is prepared, it is detached from the slave applier thread, and can be committed or rolled back by any thread on the slave. This means that the same XA transaction can appear in the `events_transactions_current` table with different states on different threads. The `events_transactions_current` table displays the current status of the most recent monitored transaction event on the thread, and does not update this status when the thread is idle. So the XA transaction can still be displayed in the `PREPARED` state for the original applier thread, after it has been processed by another thread. To positively identify XA transactions that are still in the `PREPARED` state and need to be recovered, use the `XA RECOVER` statement rather than the Performance Schema transaction tables.

The following restrictions exist for using XA transactions:

- XA transactions are not fully resilient to an unexpected halt with respect to the binary log. If there is an unexpected halt while the server is in the middle of executing an `XA PREPARE`, `XA COMMIT`, `XA ROLLBACK`, or `XA COMMIT ... ONE PHASE` statement, the server might not be able to recover to a correct state, leaving the server and the binary log in an inconsistent state. In this situation, the binary log might either contain extra XA transactions that are not applied, or miss XA transactions that are applied. Also, if GTIDs are enabled, after recovery `@@GLOBAL.GTID_EXECUTED` might not correctly describe the transactions that have been applied. Note that if an unexpected halt occurs before `XA PREPARE`, between `XA PREPARE` and `XA COMMIT` (or `XA ROLLBACK`), or after `XA COMMIT` (or `XA ROLLBACK`), the server and binary log are correctly recovered and taken to a consistent state.

- The use of replication filters or binary log filters in combination with XA transactions is not supported. Filtering of tables could cause an XA transaction to be empty on a replication slave, and empty XA transactions are not supported. Also, with the settings `master_info_repository=TABLE` and `relay_log_info_repository=TABLE` on a replication slave, which became the defaults in MySQL 8.0, the internal state of the data engine transaction is changed following a filtered XA transaction, and can become inconsistent with the replication transaction context state. The error `ER_XA_REPLICATION_FILTERS`, is logged whenever an XA transaction is impacted by a replication filter, whether or not the transaction was empty as a result. The replication slave is able to continue running in this situation, but as the error message warns, it might be in an undefined state.

- `FLUSH TABLES WITH READ LOCK` is not compatible with XA transactions.

- XA transactions are considered unsafe for statement-based replication. If two XA transactions committed in parallel on the master are being prepared on the slave in the inverse order, locking dependencies can occur that cannot be safely resolved, and it is possible for replication to fail with deadlock on the slave. This situation can occur for a single-threaded or multithreaded replication slave. When `binlog_format=STATEMENT` is set, a warning is issued for DML statements inside XA transactions. When `binlog_format=MIXED` or `binlog_format=ROW` is set, DML statements inside XA transactions are logged using row-based replication, and the potential issue is not present.

Note

Prior to MySQL 5.7.7, XA transactions were not compatible with replication at all. This was because an XA transaction that was in `PREPARED` state would be rolled back on clean server shutdown or client disconnect. Similarly, an XA transaction that was in `PREPARED` state would still exist in `PREPARED` state

in case the server was shutdown abnormally and then started again, but the contents of the transaction could not be written to the binary log. In both of these situations the XA transaction could not be replicated correctly.

C.7 Restrictions on Character Sets

- Identifiers are stored in `mysql` database tables (`user`, `db`, and so forth) using `utf8`, but identifiers can contain only characters in the Basic Multilingual Plane (BMP). Supplementary characters are not permitted in identifiers.
- The `ucs2`, `utf16`, `utf16le`, and `utf32` character sets have the following restrictions:
  - They cannot be used as a client character set, which means that they do not work for `SET NAMES` or `SET CHARACTER SET`. (See Section 10.4, “Connection Character Sets and Collations”.)
  - It is currently not possible to use `LOAD DATA INFILE` to load data files that use these character sets.
  - `FULLTEXT` indexes cannot be created on a column that uses any of these character sets. However, you can perform `IN BOOLEAN MODE` searches on the column without an index.
- The `REGEXP` and `RLIKE` operators work in byte-wise fashion, so they are not multibyte safe and may produce unexpected results with multibyte character sets. In addition, these operators compare characters by their byte values and accented characters may not compare as equal even if a given collation treats them as equal.

C.8 Restrictions on Performance Schema

The Performance Schema avoids using mutexes to collect or produce data, so there are no guarantees of consistency and results can sometimes be incorrect. Event values in `performance_schema` tables are nondeterministic and nonrepeatable.

If you save event information in another table, you should not assume that the original events will still be available later. For example, if you select events from a `performance_schema` table into a temporary table, intending to join that table with the original table later, there might be no matches.

`mysqldump` and `BACKUP DATABASE` ignore tables in the `performance_schema` database.

Tables in the `performance_schema` database cannot be locked with `LOCK TABLES`, except the `setup_xxx` tables.

Tables in the `performance_schema` database cannot be indexed.

Tables in the `performance_schema` database are not replicated.

The types of timers might vary per platform. The `performance_timers` table shows which event timers are available. If the values in this table for a given timer name are `NULL`, that timer is not supported on your platform.

Instruments that apply to storage engines might not be implemented for all storage engines. Instrumentation of each third-party engine is the responsibility of the engine maintainer.

C.9 Restrictions on Pluggable Authentication

The first part of this section describes general restrictions on the applicability of the pluggable authentication framework described at Section 6.3.10, “Pluggable Authentication”. The second part describes how third-party connector developers can determine the extent to which a connector can take advantage of pluggable authentication capabilities and what steps to take to become more compliant.

The term “native authentication” used here refers to authentication against passwords stored in the `mysql.user` table. This is the same authentication method provided by older MySQL servers, before

pluggable authentication was implemented. “Windows native authentication” refers to authentication using the credentials of a user who has already logged in to Windows, as implemented by the Windows Native Authentication plugin (“Windows plugin” for short).

General Pluggable Authentication Restrictions

- **Connector/C, Connector/C++:** Clients that use these connectors can connect to the server only through accounts that use native authentication.

  Exception: A connector supports pluggable authentication if it was built to link to `libmysqlclient` dynamically (rather than statically) and it loads the current version of `libmysqlclient` if that version is installed, or if the connector is recompiled from source to link against the current `libmysqlclient`.

  For information about writing connectors to handle informatin from the server about the default server-side authentication plugin, see Authentication Plugin Connector-Writing Considerations.

- **Connector/NET:** Clients that use Connector/NET can connect to the server through accounts that use native authentication or Windows native authentication.

- **Connector/PHP:** Clients that use this connector can connect to the server only through accounts that use native authentication, when compiled using the MySQL native driver for PHP (`mysqlnd`).

- **Windows native authentication:** Connecting through an account that uses the Windows plugin requires Windows Domain setup. Without it, NTLM authentication is used and then only local connections are possible; that is, the client and server must run on the same computer.

- **Proxy users:** Proxy user support is available to the extent that clients can connect through accounts authenticated with plugins that implement proxy user capability (that is, plugins that can return a user name different from that of the connecting user). For example, the PAM and Windows plugins support proxy users. The `mysql_native_password` and `sha256_password` authentication plugins do not support proxy users by default, but can be configured to do so; see Server Support for Proxy User Mapping.

- **Replication**: Replication slaves can employ not only master accounts using native authentication, but can also connect through master accounts that use nonnative authentication if the required client-side plugin is available. If the plugin is built into `libmysqlclient`, it is available by default. Otherwise, the plugin must be installed on the slave side in the directory named by the slave `plugin_dir` system variable.

- **`FEDERATED` tables:** A `FEDERATED` table can access the remote table only through accounts on the remote server that use native authentication.

Pluggable Authentication and Third-Party Connectors

Third-party connector developers can use the following guidelines to determine readiness of a connector to take advantage of pluggable authentication capabilities and what steps to take to become more compliant:

- An existing connector to which no changes have been made uses native authentication and clients that use the connector can connect to the server only through accounts that use native authentication. *However, you should test the connector against a recent version of the server to verify that such connections still work without problem.*

  Exception: A connector might work with pluggable authentication without any changes if it links to `libmysqlclient` dynamically (rather than statically) and it loads the current version of `libmysqlclient` if that version is installed.

- To take advantage of pluggable authentication capabilities, a connector that is `libmysqlclient`-based should be relinked against the current version of `libmysqlclient`. This enables the connector to support connections though accounts that require client-side plugins now built into

`libmysqlclient` (such as the cleartext plugin needed for PAM authentication and the Windows plugin needed for Windows native authentication). Linking with a current `libmysqlclient` also enables the connector to access client-side plugins installed in the default MySQL plugin directory (typically the directory named by the default value of the local server's `plugin_dir` system variable).

If a connector links to `libmysqlclient` dynamically, it must be ensured that the newer version of `libmysqlclient` is installed on the client host and that the connector loads it at runtime.

- Another way for a connector to support a given authentication method is to implement it directly in the client/server protocol. Connector/NET uses this approach to provide support for Windows native authentication.
- If a connector should be able to load client-side plugins from a directory different from the default plugin directory, it must implement some means for client users to specify the directory. Possibilities for this include a command-line option or environment variable from which the connector can obtain the directory name. Standard MySQL client programs such as `mysql` and `mysqladmin` implement a `--plugin-dir` option. See also Section 27.7.13, “C API Client Plugin Functions”.
- Proxy user support by a connector depends, as described earlier in this section, on whether the authentication methods that it supports permit proxy users.

C.10 Limits in MySQL

This section lists current limits in MySQL 8.0.

C.10.1 Limits on Joins

The maximum number of tables that can be referenced in a single join is 61. This includes a join handled by merging derived tables and views in the `FROM` clause into the outer query block (see Section 8.2.2.3, “Optimizing Derived Tables, View References, and Common Table Expressions”). It also applies to the number of tables that can be referenced in the definition of a view.

C.10.2 Limits on Number of Databases and Tables

MySQL has no limit on the number of databases. The underlying file system may have a limit on the number of directories.

MySQL has no limit on the number of tables. The underlying file system may have a limit on the number of files that represent tables. Individual storage engines may impose engine-specific constraints. `InnoDB` permits up to 4 billion tables.

C.10.3 Limits on Table Size

The effective maximum table size for MySQL databases is usually determined by operating system constraints on file sizes, not by MySQL internal limits. For up-to-date information operating system file size limits, refer to the documentation specific to your operating system.

Windows users, please note that FAT and VFAT (FAT32) are *not* considered suitable for production use with MySQL. Use NTFS instead.

If you encounter a full-table error, there are several reasons why it might have occurred:

- The disk might be full.
- You are using `InnoDB` tables and have run out of room in an `InnoDB` tablespace file. The maximum tablespace size is also the maximum size for a table. For tablespace size limits, see Section 15.8.1.7, “Limits on InnoDB Tables”.

  Generally, partitioning of tables into multiple tablespace files is recommended for tables larger than 1TB in size.

- You have hit an operating system file size limit. For example, you are using `MyISAM` tables on an operating system that supports files only up to 2GB in size and you have hit this limit for the data file or index file.
- You are using a `MyISAM` table and the space required for the table exceeds what is permitted by the internal pointer size. `MyISAM` permits data and index files to grow up to 256TB by default, but this limit can be changed up to the maximum permissible size of 65,536TB ($256^7 - 1$ bytes).

  If you need a `MyISAM` table that is larger than the default limit and your operating system supports large files, the `CREATE TABLE` statement supports `AVG_ROW_LENGTH` and `MAX_ROWS` options. See Section 13.1.18, “CREATE TABLE Syntax”. The server uses these options to determine how large a table to permit.

  If the pointer size is too small for an existing table, you can change the options with `ALTER TABLE` to increase a table's maximum permissible size. See Section 13.1.8, “ALTER TABLE Syntax”.

  ```
  ALTER TABLE tbl_name MAX_ROWS=1000000000 AVG_ROW_LENGTH=nnn;
  ```

  You have to specify `AVG_ROW_LENGTH` only for tables with `BLOB` or `TEXT` columns; in this case, MySQL can't optimize the space required based only on the number of rows.

  To change the default size limit for `MyISAM` tables, set the `myisam_data_pointer_size`, which sets the number of bytes used for internal row pointers. The value is used to set the pointer size for new tables if you do not specify the `MAX_ROWS` option. The value of `myisam_data_pointer_size` can be from 2 to 7. A value of 4 permits tables up to 4GB; a value of 6 permits tables up to 256TB.

  You can check the maximum data and index sizes by using this statement:

  ```
  SHOW TABLE STATUS FROM db_name LIKE 'tbl_name';
  ```

  You also can use `myisamchk -dv /path/to/table-index-file`. See Section 13.7.6, “SHOW Syntax”, or Section 4.6.4, “`myisamchk` — MyISAM Table-Maintenance Utility”.

  Other ways to work around file-size limits for `MyISAM` tables are as follows:

  - If your large table is read only, you can use `myisampack` to compress it. `myisampack` usually compresses a table by at least 50%, so you can have, in effect, much bigger tables. `myisampack` also can merge multiple tables into a single table. See Section 4.6.6, “`myisampack` — Generate Compressed, Read-Only MyISAM Tables”.
  - MySQL includes a `MERGE` library that enables you to handle a collection of `MyISAM` tables that have identical structure as a single `MERGE` table. See Section 16.7, “The MERGE Storage Engine”.
- You are using the `MEMORY` (`HEAP`) storage engine; in this case you need to increase the value of the `max_heap_table_size` system variable. See Section 5.1.7, “Server System Variables”.

C.10.4 Limits on Table Column Count and Row Size

Column Count Limits

MySQL has hard limit of 4096 columns per table, but the effective maximum may be less for a given table. The exact column limit depends on several factors:

- The maximum row size for a table constrains the number (and possibly size) of columns because the total length of all columns cannot exceed this size. See Row Size Limits.
- The storage requirements of individual columns constrain the number of columns that fit within a given maximum row size. Storage requirements for some data types depend on factors such as storage engine, storage format, and character set. See Section 11.8, “Data Type Storage Requirements”.

- Storage engines may impose additional restrictions that limit table column count. For example, `InnoDB` has a limit of 1017 columns per table. See Section 15.8.1.7, “Limits on InnoDB Tables”. For information about other storage engines, see Chapter 16, *Alternative Storage Engines*.

Row Size Limits

The maximum row size for a given table is determined by several factors:

- The internal representation of a MySQL table has a maximum row size limit of 65,535 bytes, even if the storage engine is capable of supporting larger rows. `BLOB` and `TEXT` columns only contribute 9 to 12 bytes toward the row size limit because their contents are stored separately from the rest of the row.
- The maximum row size for an `InnoDB` table, which applies to data stored locally within a database page, is slightly less than half a page for 4KB, 8KB, 16KB, and 32KB `innodb_page_size` settings. For example, the maximum row size is slightly less than 8KB for the default 16KB `InnoDB` page size. For 64KB pages, the maximum row size is slightly less than 16KB. See Section 15.8.1.7, “Limits on InnoDB Tables”.

  If a row containing variable-length columns exceeds the `InnoDB` maximum row size, `InnoDB` selects variable-length columns for external off-page storage until the row fits within the `InnoDB` row size limit. The amount of data stored locally for variable-length columns that are stored off-page differs by row format. For more information, see Section 15.10, “InnoDB Row Storage and Row Formats”.
- Different storage formats use different amounts of page header and trailer data, which affects the amount of storage available for rows.
  - For information about `InnoDB` row formats, see Section 15.10, “InnoDB Row Storage and Row Formats”, and Section 15.8.1.2, “The Physical Row Structure of an InnoDB Table”.
  - For information about `MyISAM` storage formats, see Section 16.2.3, “MyISAM Table Storage Formats”.

Row Size Limit Examples

- The MySQL maximum row size limit of 65,535 bytes is demonstrated in the following `InnoDB` and `MyISAM` examples. The limit is enforced regardless of storage engine, even though the storage engine may be capable of supporting larger rows.

```
mysql> CREATE TABLE t (a VARCHAR(10000), b VARCHAR(10000),
       c VARCHAR(10000), d VARCHAR(10000), e VARCHAR(10000),
       f VARCHAR(10000), g VARCHAR(6000)) ENGINE=InnoDB CHARACTER SET latin1;
ERROR 1118 (42000): Row size too large. The maximum row size for the used
table type, not counting BLOBs, is 65535. This includes storage overhead,
check the manual. You have to change some columns to TEXT or BLOBs
```

```
mysql> CREATE TABLE t (a VARCHAR(10000), b VARCHAR(10000),
       c VARCHAR(10000), d VARCHAR(10000), e VARCHAR(10000),
       f VARCHAR(10000), g VARCHAR(6000)) ENGINE=MyISAM CHARACTER SET latin1;
ERROR 1118 (42000): Row size too large. The maximum row size for the used
table type, not counting BLOBs, is 65535. This includes storage overhead,
check the manual. You have to change some columns to TEXT or BLOBs
```

  In the following `MyISAM` example, changing a column to `TEXT` avoids the 65,535-byte row size limit and permits the operation to succeed because `BLOB` and `TEXT` columns only contribute 9 to 12 bytes toward the row size.

```
mysql> CREATE TABLE t (a VARCHAR(10000), b VARCHAR(10000),
       c VARCHAR(10000), d VARCHAR(10000), e VARCHAR(10000),
       f VARCHAR(10000), g TEXT(6000)) ENGINE=MyISAM CHARACTER SET latin1;
Query OK, 0 rows affected (0.02 sec)
```

The operation succeeds for an InnoDB table because changing a column to TEXT avoids the MySQL 65,535-byte row size limit, and InnoDB off-page storage of variable-length columns avoids the InnoDB row size limit.

```
mysql> CREATE TABLE t (a VARCHAR(10000), b VARCHAR(10000),
       c VARCHAR(10000), d VARCHAR(10000), e VARCHAR(10000),
       f VARCHAR(10000), g TEXT(6000)) ENGINE=InnoDB CHARACTER SET latin1;
Query OK, 0 rows affected (0.02 sec)
```

- Storage for variable-length columns includes length bytes, which are counted toward the row size. For example, a VARCHAR(255) CHARACTER SET utf8mb3 column takes two bytes to store the length of the value, so each value can take up to 767 bytes.

  The statement to create table t1 succeeds because the columns require 32,765 + 2 bytes and 32,766 + 2 bytes, which falls within the maximum row size of 65,535 bytes:

  ```
  mysql> CREATE TABLE t1
         (c1 VARCHAR(32765) NOT NULL, c2 VARCHAR(32766) NOT NULL)
         ENGINE = InnoDB CHARACTER SET latin1;
  Query OK, 0 rows affected (0.02 sec)
  ```

  The statement to create table t2 fails because, although the column length is within the maximum length of 65,535 bytes, two additional bytes are required to record the length, which causes the row size to exceed 65,535 bytes:

  ```
  mysql> CREATE TABLE t2
         (c1 VARCHAR(65535) NOT NULL)
         ENGINE = InnoDB CHARACTER SET latin1;
  ERROR 1118 (42000): Row size too large. The maximum row size for the used
  table type, not counting BLOBs, is 65535. This includes storage overhead,
  check the manual. You have to change some columns to TEXT or BLOBs
  ```

  Reducing the column length to 65,533 or less permits the statement to succeed.

  ```
  mysql> CREATE TABLE t2
         (c1 VARCHAR(65533) NOT NULL)
         ENGINE = InnoDB CHARACTER SET latin1;
  Query OK, 0 rows affected (0.01 sec)
  ```

- For MyISAM tables, NULL columns require additional space in the row to record whether their values are NULL. Each NULL column takes one bit extra, rounded up to the nearest byte.

  The statement to create table t3 fails because MyISAM requires space for NULL columns in addition to the space required for variable-length column length bytes, causing the row size to exceed 65,535 bytes:

  ```
  mysql> CREATE TABLE t3
         (c1 VARCHAR(32765) NULL, c2 VARCHAR(32766) NULL)
         ENGINE = MyISAM CHARACTER SET latin1;
  ERROR 1118 (42000): Row size too large. The maximum row size for the used
  table type, not counting BLOBs, is 65535. This includes storage overhead,
  check the manual. You have to change some columns to TEXT or BLOBs
  ```

  For information about InnoDB NULL column storage, see Section 15.8.1.2, “The Physical Row Structure of an InnoDB Table”.

- InnoDB restricts row size (for data stored locally within the database page) to slightly less than half a database page for 4KB, 8KB, 16KB, and 32KB innodb_page_size settings, and to slightly less than 16KB for 64KB pages.

The statement to create table `t4` fails because the defined columns exceed the row size limit for a 16KB `InnoDB` page.

```
mysql> CREATE TABLE t4 (
       c1 CHAR(255),c2 CHAR(255),c3 CHAR(255),
       c4 CHAR(255),c5 CHAR(255),c6 CHAR(255),
       c7 CHAR(255),c8 CHAR(255),c9 CHAR(255),
       c10 CHAR(255),c11 CHAR(255),c12 CHAR(255),
       c13 CHAR(255),c14 CHAR(255),c15 CHAR(255),
       c16 CHAR(255),c17 CHAR(255),c18 CHAR(255),
       c19 CHAR(255),c20 CHAR(255),c21 CHAR(255),
       c22 CHAR(255),c23 CHAR(255),c24 CHAR(255),
       c25 CHAR(255),c26 CHAR(255),c27 CHAR(255),
       c28 CHAR(255),c29 CHAR(255),c30 CHAR(255),
       c31 CHAR(255),c32 CHAR(255),c33 CHAR(255)
       ) ENGINE=InnoDB ROW_FORMAT=DYNAMIC DEFAULT CHARSET latin1;
ERROR 1118 (42000): Row size too large (> 8126). Changing some columns to TEXT or BLOB may help.
In current row format, BLOB prefix of 0 bytes is stored inline.
```

C.10.5 Windows Platform Limitations

The following limitations apply to use of MySQL on the Windows platform:

- **Process memory**

  On Windows 32-bit platforms, it is not possible by default to use more than 2GB of RAM within a single process, including MySQL. This is because the physical address limit on Windows 32-bit is 4GB and the default setting within Windows is to split the virtual address space between kernel (2GB) and user/applications (2GB).

  Some versions of Windows have a boot time setting to enable larger applications by reducing the kernel application. Alternatively, to use more than 2GB, use a 64-bit version of Windows.

- **File system aliases**

  When using `MyISAM` tables, you cannot use aliases within Windows link to the data files on another volume and then link back to the main MySQL `datadir` location.

  This facility is often used to move the data and index files to a RAID or other fast solution.

- **Limited number of ports**

  Windows systems have about 4,000 ports available for client connections, and after a connection on a port closes, it takes two to four minutes before the port can be reused. In situations where clients connect to and disconnect from the server at a high rate, it is possible for all available ports to be used up before closed ports become available again. If this happens, the MySQL server appears to be unresponsive even though it is running. Ports may be used by other applications running on the machine as well, in which case the number of ports available to MySQL is lower.

  For more information about this problem, see http://support.microsoft.com/default.aspx?scid=kb;en-us;196271.

- **`DATA DIRECTORY` and `INDEX DIRECTORY`**

  The `DATA DIRECTORY` option for `CREATE TABLE` is supported on Windows only for `InnoDB` tables, as described in Section 15.7.5, “Creating File-Per-Table Tablespaces Outside the Data Directory”. For `MyISAM` and other storage engines, the `DATA DIRECTORY` and `INDEX DIRECTORY` options for `CREATE TABLE` are ignored on Windows and any other platforms with a nonfunctional `realpath()` call.

- **`DROP DATABASE`**

You cannot drop a database that is in use by another session.

- **Case-insensitive names**

  File names are not case-sensitive on Windows, so MySQL database and table names are also not case-sensitive on Windows. The only restriction is that database and table names must be specified using the same case throughout a given statement. See Section 9.2.2, “Identifier Case Sensitivity”.

- **Directory and file names**

  On Windows, MySQL Server supports only directory and file names that are compatible with the current ANSI code pages. For example, the following Japanese directory name will not work in the Western locale (code page 1252):

```
datadir="C:/私たちのプロジェクトのデータ"
```

  The same limitation applies to directory and file names referred to in SQL statements, such as the data file path name in `LOAD DATA INFILE`.

- **The `\` path name separator character**

  Path name components in Windows are separated by the `\` character, which is also the escape character in MySQL. If you are using `LOAD DATA INFILE` or `SELECT ... INTO OUTFILE`, use Unix-style file names with `/` characters:

```
mysql> LOAD DATA INFILE 'C:/tmp/skr.txt' INTO TABLE skr;
mysql> SELECT * INTO OUTFILE 'C:/tmp/skr.txt' FROM skr;
```

  Alternatively, you must double the `\` character:

```
mysql> LOAD DATA INFILE 'C:\\tmp\\skr.txt' INTO TABLE skr;
mysql> SELECT * INTO OUTFILE 'C:\\tmp\\skr.txt' FROM skr;
```

- **Problems with pipes**

  Pipes do not work reliably from the Windows command-line prompt. If the pipe includes the character `^Z` / `CHAR(24)`, Windows thinks that it has encountered end-of-file and aborts the program.

  This is mainly a problem when you try to apply a binary log as follows:

```
C:\> mysqlbinlog binary_log_file | mysql --user=root
```

  If you have a problem applying the log and suspect that it is because of a `^Z` / `CHAR(24)` character, you can use the following workaround:

```
C:\> mysqlbinlog binary_log_file --result-file=/tmp/bin.sql
C:\> mysql --user=root --execute "source /tmp/bin.sql"
```

  The latter command also can be used to reliably read in any SQL file that may contain binary data.

MySQL Glossary

These terms are commonly used in information about the MySQL database server. This glossary originated as a reference for terminology about the InnoDB storage engine, and the majority of definitions are InnoDB-related.

A

.ARM file
: Metadata for `ARCHIVE` tables. Contrast with **.ARZ file**. Files with this extension are always included in backups produced by the `mysqlbackup` command of the **MySQL Enterprise Backup** product.
See Also .ARZ file, MySQL Enterprise Backup, mysqlbackup command.

.ARZ file
: Data for ARCHIVE tables. Contrast with **.ARM file**. Files with this extension are always included in backups produced by the `mysqlbackup` command of the **MySQL Enterprise Backup** product.
See Also .ARM file, MySQL Enterprise Backup, mysqlbackup command.

ACID
: An acronym standing for atomicity, consistency, isolation, and durability. These properties are all desirable in a database system, and are all closely tied to the notion of a **transaction**. The transactional features of `InnoDB` adhere to the ACID principles.

  Transactions are **atomic** units of work that can be **committed** or **rolled back**. When a transaction makes multiple changes to the database, either all the changes succeed when the transaction is committed, or all the changes are undone when the transaction is rolled back.

  The database remains in a consistent state at all times — after each commit or rollback, and while transactions are in progress. If related data is being updated across multiple tables, queries see either all old values or all new values, not a mix of old and new values.

  Transactions are protected (isolated) from each other while they are in progress; they cannot interfere with each other or see each other's uncommitted data. This isolation is achieved through the **locking** mechanism. Experienced users can adjust the **isolation level**, trading off less protection in favor of increased performance and **concurrency**, when they can be sure that the transactions really do not interfere with each other.

  The results of transactions are durable: once a commit operation succeeds, the changes made by that transaction are safe from power failures, system crashes, race conditions, or other potential dangers that many non-database applications are vulnerable to. Durability typically involves writing to disk storage, with a certain amount of redundancy to protect against power failures or software crashes during write operations. (In `InnoDB`, the **doublewrite buffer** assists with durability.)
  See Also atomic, commit, concurrency, doublewrite buffer, isolation level, locking, rollback, transaction.

adaptive flushing
: An algorithm for **InnoDB** tables that smooths out the I/O overhead introduced by **checkpoints**. Instead of **flushing** all modified **pages** from the **buffer pool** to the **data files** at once, MySQL periodically flushes small sets of modified pages. The adaptive flushing algorithm extends this process by estimating the optimal rate to perform these periodic flushes, based on the rate of flushing and how fast **redo** information is generated.
See Also buffer pool, checkpoint, data files, flush, InnoDB, page, redo log.

adaptive hash index
: An optimization for `InnoDB` tables that can speed up lookups using `=` and `IN` operators, by constructing a **hash index** in memory. MySQL monitors index searches for `InnoDB` tables, and if queries could benefit from a hash index, it builds one automatically for index **pages** that are frequently accessed.
In a sense, the adaptive hash index configures MySQL at runtime to take advantage of ample main memory, coming closer to the architecture of main-memory databases. This feature is controlled by the `innodb_adaptive_hash_index` configuration option. Because this feature benefits some workloads and not others, and the memory used for the hash index is reserved in the **buffer pool**, typically you should benchmark with this feature both enabled and disabled.

The hash index is always built based on an existing **B-tree** index on the table. MySQL can build a hash index on a prefix of any length of the key defined for the B-tree, depending on the pattern of searches against the index. A hash index can be partial; the whole B-tree index does not need to be cached in the buffer pool.

In MySQL 5.6 and higher, another way to take advantage of fast single-value lookups with `InnoDB` tables is to use the `InnoDB` **memcached** plugin. See Section 15.19, “InnoDB memcached Plugin” for details.
See Also B-tree, buffer pool, hash index, memcached, page, secondary index.

AHI
Acronym for **adaptive hash index**.
See Also adaptive hash index.

AIO
Acronym for **asynchronous I/O**. You might see this acronym in `InnoDB` messages or keywords.
See Also asynchronous I/O.

application programming interface (API)
A set of functions or procedures. An API provides a stable set of names and types for functions, procedures, parameters, and return values.

apply
When a backup produced by the **MySQL Enterprise Backup** product does not include the most recent changes that occurred while the backup was underway, the process of updating the backup files to include those changes is known as the **apply** step. It is specified by the `apply-log` option of the `mysqlbackup` command.

Before the changes are applied, we refer to the files as a **raw backup**. After the changes are applied, we refer to the files as a **prepared backup**. The changes are recorded in the **ibbackup_logfile** file; once the apply step is finished, this file is no longer necessary.
See Also hot backup, ibbackup_logfile, MySQL Enterprise Backup, prepared backup, raw backup.

asynchronous I/O
A type of I/O operation that allows other processing to proceed before the I/O is completed. Also known as **nonblocking I/O** and abbreviated as **AIO**. `InnoDB` uses this type of I/O for certain operations that can run in parallel without affecting the reliability of the database, such as reading pages into the **buffer pool** that have not actually been requested, but might be needed soon.

Historically, `InnoDB` used asynchronous I/O on Windows systems only. Starting with the InnoDB Plugin 1.1 and MySQL 5.5, `InnoDB` uses asynchronous I/O on Linux systems. This change introduces a dependency on `libaio`. Asynchronous I/O on Linux systems is configured using the `innodb_use_native_aio` option, which is enabled by default. On other Unix-like systems, InnoDB uses synchronous I/O only.
See Also buffer pool, nonblocking I/O.

atomic
In the SQL context, **transactions** are units of work that either succeed entirely (when **committed**) or have no effect at all (when **rolled back**). The indivisible ("atomic") property of transactions is the “A” in the acronym **ACID**.
See Also ACID, commit, rollback, transaction.

atomic DDL
An atomic *DDL* statement is one that combines the *data dictionary* updates, *storage engine* operations, and *binary log* writes associated with a DDL operation into a single, atomic transaction. The transaction is either fully committed or rolled back, even if the server halts during the operation. Atomic DDL support was added in MySQL 8.0. For more information, see Section 13.1.1, “Atomic Data Definition Statement Support”.
See Also binary log, data dictionary, DDL, storage engine.

atomic instruction
Special instructions provided by the CPU, to ensure that critical low-level operations cannot be interrupted.

auto-increment
A property of a table column (specified by the `AUTO_INCREMENT` keyword) that automatically adds an ascending sequence of values in the column.

It saves work for the developer, not to have to produce new unique values when inserting new rows. It provides useful information for the query optimizer, because the column is known to be not null and with unique values. The values from such a column can be used as lookup keys in various contexts, and because they are auto-generated there is no reason to ever change them; for this reason, primary key columns are often specified as auto-incrementing.

Auto-increment columns can be problematic with statement-based replication, because replaying the statements on a slave might not produce the same set of column values as on the master, due to timing issues. When you have an auto-incrementing primary key, you can use statement-based replication only with the setting `innodb_autoinc_lock_mode=1`. If you have `innodb_autoinc_lock_mode=2`, which allows higher concurrency for insert operations, use **row-based replication** rather than **statement-based replication**. The setting `innodb_autoinc_lock_mode=0` should not be used except for compatibility purposes.

Consecutive lock mode (`innodb_autoinc_lock_mode=1`) is the default setting prior to MySQL 8.0.3. As of MySQL 8.0.3, interleaved lock mode (`innodb_autoinc_lock_mode=2`) is the default, which reflects the change from statement-based to row-based replication as the default replication type.
See Also auto-increment locking, innodb_autoinc_lock_mode, primary key, row-based replication, statement-based replication.

auto-increment locking
The convenience of an **auto-increment** primary key involves some tradeoff with concurrency. In the simplest case, if one transaction is inserting values into the table, any other transactions must wait to do their own inserts into that table, so that rows inserted by the first transaction receive consecutive primary key values. `InnoDB` includes optimizations and the `innodb_autoinc_lock_mode` option so that you can configure and optimal balance between predictable sequences of auto-increment values and maximum **concurrency** for insert operations.
See Also auto-increment, concurrency, innodb_autoinc_lock_mode.

autocommit
A setting that causes a **commit** operation after each **SQL** statement. This mode is not recommended for working with `InnoDB` tables with **transactions** that span several statements. It can help performance for **read-only transactions** on `InnoDB` tables, where it minimizes overhead from **locking** and generation of **undo** data, especially in MySQL 5.6.4 and up. It is also appropriate for working with `MyISAM` tables, where transactions are not applicable.
See Also commit, locking, read-only transaction, SQL, transaction, undo.

availability
The ability to cope with, and if necessary recover from, failures on the host, including failures of MySQL, the operating system, or the hardware and maintenance activity that may otherwise cause downtime. Often paired with **scalability** as critical aspects of a large-scale deployment.
See Also scalability.

B

B-tree
A tree data structure that is popular for use in database indexes. The structure is kept sorted at all times, enabling fast lookup for exact matches (equals operator) and ranges (for example, greater than, less than, and `BETWEEN` operators). This type of index is available for most storage engines, such as `InnoDB` and `MyISAM`.

Because B-tree nodes can have many children, a B-tree is not the same as a binary tree, which is limited to 2 children per node.

Contrast with **hash index**, which is only available in the `MEMORY` storage engine. The `MEMORY` storage engine can also use B-tree indexes, and you should choose B-tree indexes for `MEMORY` tables if some queries use range operators.

The use of the term B-tree is intended as a reference to the general class of index design. B-tree structures used by MySQL storage engines may be regarded as variants due to sophistications not present in a classic

B-tree design. For related information, refer to the `InnoDB` Page Structure Fil Header section of the MySQL Internals Manual.
See Also hash index.

backticks
Identifiers within MySQL SQL statements must be quoted using the backtick character (`) if they contain special characters or reserved words. For example, to refer to a table named `FOO#BAR` or a column named `SELECT`, you would specify the identifiers as `` `FOO#BAR` `` and `` `SELECT` ``. Since the backticks provide an extra level of safety, they are used extensively in program-generated SQL statements, where the identifier names might not be known in advance.

Many other database systems use double quotation marks (") around such special names. For portability, you can enable `ANSI_QUOTES` mode in MySQL and use double quotation marks instead of backticks to qualify identifier names.
See Also SQL.

backup
The process of copying some or all table data and metadata from a MySQL instance, for safekeeping. Can also refer to the set of copied files. This is a crucial task for DBAs. The reverse of this process is the **restore** operation.

With MySQL, **physical backups** are performed by the **MySQL Enterprise Backup** product, and **logical backups** are performed by the `mysqldump` command. These techniques have different characteristics in terms of size and representation of the backup data, and speed (especially speed of the restore operation).

Backups are further classified as **hot**, **warm**, or **cold** depending on how much they interfere with normal database operation. (Hot backups have the least interference, cold backups the most.)
See Also cold backup, hot backup, logical backup, MySQL Enterprise Backup, mysqldump, physical backup, warm backup.

base column
A non-generated table column upon which a stored generated column or virtual generated column is based. In other words, a base column is a non-generated table column that is part of a generated column definition.
See Also generated column, stored generated column, virtual generated column.

beta
An early stage in the life of a software product, when it is available only for evaluation, typically without a definite release number or a number less than 1. `InnoDB` does not use the beta designation, preferring an **early adopter** phase that can extend over several point releases, leading to a **GA** release.
See Also early adopter, GA.

binary log
A file containing a record of all statements that attempt to change table data. These statements can be replayed to bring slave servers up to date in a **replication** scenario, or to bring a database up to date after restoring table data from a backup. The binary logging feature can be turned on and off, although Oracle recommends always enabling it if you use replication or perform backups.

You can examine the contents of the binary log, or replay those statements during replication or recovery, by using the `mysqlbinlog` command. For full information about the binary log, see Section 5.4.4, “The Binary Log”. For MySQL configuration options related to the binary log, see Section 17.1.6.4, “Binary Logging Options and Variables”.

For the **MySQL Enterprise Backup** product, the file name of the binary log and the current position within the file are important details. To record this information for the master server when taking a backup in a replication context, you can specify the `--slave-info` option.

Prior to MySQL 5.0, a similar capability was available, known as the update log. In MySQL 5.0 and higher, the binary log replaces the update log.
See Also binlog, MySQL Enterprise Backup, replication.

binlog
: An informal name for the **binary log** file. For example, you might see this abbreviation used in e-mail messages or forum discussions.
See Also binary log.

blind query expansion
: A special mode of **full-text search** enabled by the `WITH QUERY EXPANSION` clause. It performs the search twice, where the search phrase for the second search is the original search phrase concatenated with the few most highly relevant documents from the first search. This technique is mainly applicable for short search phrases, perhaps only a single word. It can uncover relevant matches where the precise search term does not occur in the document.
See Also full-text search.

bottleneck
: A portion of a system that is constrained in size or capacity, that has the effect of limiting overall throughput. For example, a memory area might be smaller than necessary; access to a single required resource might prevent multiple CPU cores from running simultaneously; or waiting for disk I/O to complete might prevent the CPU from running at full capacity. Removing bottlenecks tends to improve **concurrency**. For example, the ability to have multiple `InnoDB` **buffer pool** instances reduces contention when multiple sessions read from and write to the buffer pool simultaneously.
See Also buffer pool, concurrency.

bounce
: A **shutdown** operation immediately followed by a restart. Ideally with a relatively short **warmup** period so that performance and throughput quickly return to a high level.
See Also shutdown.

buddy allocator
: A mechanism for managing different-sized **pages** in the InnoDB **buffer pool**.
See Also buffer pool, page, page size.

buffer
: A memory or disk area used for temporary storage. Data is buffered in memory so that it can be written to disk efficiently, with a few large I/O operations rather than many small ones. Data is buffered on disk for greater reliability, so that it can be recovered even when a **crash** or other failure occurs at the worst possible time. The main types of buffers used by InnoDB are the **buffer pool**, the **doublewrite buffer**, and the **change buffer**.
See Also buffer pool, change buffer, crash, doublewrite buffer.

buffer pool
: The memory area that holds cached `InnoDB` data for both tables and indexes. For efficiency of high-volume read operations, the buffer pool is divided into **pages** that can potentially hold multiple rows. For efficiency of cache management, the buffer pool is implemented as a linked list of pages; data that is rarely used is aged out of the cache, using a variation of the **LRU** algorithm. On systems with large memory, you can improve concurrency by dividing the buffer pool into multiple **buffer pool instances**.

  Several `InnoDB` status variables, `INFORMATION_SCHEMA` tables, and `performance_schema` tables help to monitor the internal workings of the buffer pool. Starting in MySQL 5.6, you can avoid a lengthy warmup period after restarting the server, particularly for instances with large buffer pools, by saving the buffer pool state at server shutdown and restoring the buffer pool to the same state at server startup. See Section 15.6.3.8, “Saving and Restoring the Buffer Pool State”.
  See Also buffer pool instance, LRU, page, warm up.

buffer pool instance
: Any of the multiple regions into which the **buffer pool** can be divided, controlled by the `innodb_buffer_pool_instances` configuration option. The total memory size specified by `innodb_buffer_pool_size` is divided among all buffer pool instances. Typically, having multiple buffer pool instances is appropriate for systems that allocate multiple gigabytes to the `InnoDB` buffer pool, with each instance being one gigabyte or larger. On systems loading or looking up large amounts of data in the buffer

pool from many concurrent sessions, having multiple buffer pool instances reduces contention for exclusive access to data structures that manage the buffer pool.
See Also buffer pool.

built-in
The built-in `InnoDB` storage engine within MySQL is the original form of distribution for the storage engine. Contrast with the **InnoDB Plugin**. Starting with MySQL 5.5, the InnoDB Plugin is merged back into the MySQL code base as the built-in `InnoDB` storage engine (known as InnoDB 1.1).

This distinction is important mainly in MySQL 5.1, where a feature or bug fix might apply to the InnoDB Plugin but not the built-in `InnoDB`, or vice versa.
See Also InnoDB.

business rules
The relationships and sequences of actions that form the basis of business software, used to run a commercial company. Sometimes these rules are dictated by law, other times by company policy. Careful planning ensures that the relationships encoded and enforced by the database, and the actions performed through application logic, accurately reflect the real policies of the company and can handle real-life situations.

For example, an employee leaving a company might trigger a sequence of actions from the human resources department. The human resources database might also need the flexibility to represent data about a person who has been hired, but not yet started work. Closing an account at an online service might result in data being removed from a database, or the data might be moved or flagged so that it could be recovered if the account is re-opened. A company might establish policies regarding salary maximums, minimums, and adjustments, in addition to basic sanity checks such as the salary not being a negative number. A retail database might not allow a purchase with the same serial number to be returned more than once, or might not allow credit card purchases above a certain value, while a database used to detect fraud might allow these kinds of things.
See Also relational.

C

.cfg file
A metadata file used with the `InnoDB` **transportable tablespace** feature. It is produced by the command `FLUSH TABLES ... FOR EXPORT`, puts one or more tables in a consistent state that can be copied to another server. The `.cfg` file is copied along with the corresponding **.ibd file**, and used to adjust the internal values of the `.ibd` file, such as the **space ID**, during the `ALTER TABLE ... IMPORT TABLESPACE` step.
See Also .ibd file, space ID, transportable tablespace.

cache
The general term for any memory area that stores copies of data for frequent or high-speed retrieval. In `InnoDB`, the primary kind of cache structure is the **buffer pool**.
See Also buffer, buffer pool.

cardinality
The number of different values in a table **column**. When queries refer to columns that have an associated **index**, the cardinality of each column influences which access method is most efficient. For example, for a column with a **unique constraint**, the number of different values is equal to the number of rows in the table. If a table has a million rows but only 10 different values for a particular column, each value occurs (on average) 100,000 times. A query such as `SELECT c1 FROM t1 WHERE c1 = 50;` thus might return 1 row or a huge number of rows, and the database server might process the query differently depending on the cardinality of `c1`.

If the values in a column have a very uneven distribution, the cardinality might not be a good way to determine the best query plan. For example, `SELECT c1 FROM t1 WHERE c1 = x;` might return 1 row when `x=50` and a million rows when `x=30`. In such a case, you might need to use **index hints** to pass along advice about which lookup method is more efficient for a particular query.

Cardinality can also apply to the number of distinct values present in multiple columns, as in a **composite index**.

See Also column, composite index, index, index hint, persistent statistics, random dive, selectivity, unique constraint.

change buffer
A special data structure that records changes to **pages** in **secondary indexes**. These values could result from SQL `INSERT`, `UPDATE`, or `DELETE` statements (**DML**). The set of features involving the change buffer is known collectively as **change buffering**, consisting of **insert buffering**, **delete buffering**, and **purge buffering**.

Changes are only recorded in the change buffer when the relevant page from the secondary index is not in the **buffer pool**. When the relevant index page is brought into the buffer pool while associated changes are still in the change buffer, the changes for that page are applied in the buffer pool (**merged**) using the data from the change buffer. Periodically, the **purge** operation that runs during times when the system is mostly idle, or during a slow shutdown, writes the new index pages to disk. The purge operation can write the disk blocks for a series of index values more efficiently than if each value were written to disk immediately.

Physically, the change buffer is part of the **system tablespace**, so that the index changes remain buffered across database restarts. The changes are only applied (**merged**) when the pages are brought into the buffer pool due to some other read operation.

The kinds and amount of data stored in the change buffer are governed by the `innodb_change_buffering` and `innodb_change_buffer_max_size` configuration options. To see information about the current data in the change buffer, issue the `SHOW ENGINE INNODB STATUS` command.

Formerly known as the **insert buffer**.
See Also buffer pool, change buffering, delete buffering, DML, insert buffer, insert buffering, merge, page, purge, purge buffering, secondary index, system tablespace.

change buffering
The general term for the features involving the **change buffer**, consisting of **insert buffering**, **delete buffering**, and **purge buffering**. Index changes resulting from SQL statements, which could normally involve random I/O operations, are held back and performed periodically by a background **thread**. This sequence of operations can write the disk blocks for a series of index values more efficiently than if each value were written to disk immediately. Controlled by the `innodb_change_buffering` and `innodb_change_buffer_max_size` configuration options.
See Also change buffer, delete buffering, insert buffering, purge buffering.

checkpoint
As changes are made to data pages that are cached in the **buffer pool**, those changes are written to the **data files** sometime later, a process known as **flushing**. The checkpoint is a record of the latest changes (represented by an **LSN** value) that have been successfully written to the data files.
See Also buffer pool, data files, flush, fuzzy checkpointing, LSN.

checksum
In `InnoDB`, a validation mechanism to detect corruption when a **page** in a **tablespace** is read from disk into the `InnoDB` **buffer pool**. This feature is controlled by the `innodb_checksums` configuration option in MySQL 5.5. `innodb_checksums` is deprecated in MySQL 5.6.3, replaced by `innodb_checksum_algorithm`.

The `innochecksum` command helps diagnose corruption problems by testing the checksum values for a specified **tablespace** file while the MySQL server is shut down.

MySQL also uses checksums for replication purposes. For details, see the configuration options `binlog_checksum`, `master_verify_checksum`, and `slave_sql_verify_checksum`.
See Also buffer pool, page, tablespace.

child table
In a **foreign key** relationship, a child table is one whose rows refer (or point) to rows in another table with an identical value for a specific column. This is the table that contains the `FOREIGN KEY ... REFERENCES` clause and optionally `ON UPDATE` and `ON DELETE` clauses. The corresponding row in the **parent table**

must exist before the row can be created in the child table. The values in the child table can prevent delete or update operations on the parent table, or can cause automatic deletion or updates in the child table, based on the `ON CASCADE` option used when creating the foreign key.
See Also foreign key, parent table.

clean page
A **page** in the `InnoDB` **buffer pool** where all changes made in memory have also been written (**flushed**) to the data files. The opposite of a **dirty page**.
See Also buffer pool, data files, dirty page, flush, page.

clean shutdown
A **shutdown** that completes without errors and applies all changes to `InnoDB` tables before finishing, as opposed to a **crash** or a **fast shutdown**. Synonym for **slow shutdown**.
See Also crash, fast shutdown, shutdown, slow shutdown.

client
A type of program that sends requests to a **server**, and interprets or processes the results. The client software might run only some of the time (such as a mail or chat program), and might run interactively (such as the `mysql` command processor).
See Also mysql, server.

clustered index
The `InnoDB` term for a **primary key** index. `InnoDB` table storage is organized based on the values of the primary key columns, to speed up queries and sorts involving the primary key columns. For best performance, choose the primary key columns carefully based on the most performance-critical queries. Because modifying the columns of the clustered index is an expensive operation, choose primary columns that are rarely or never updated.

In the Oracle Database product, this type of table is known as an **index-organized table**.
See Also index, primary key, secondary index.

cold backup
A **backup** taken while the database is shut down. For busy applications and websites, this might not be practical, and you might prefer a **warm backup** or a **hot backup**.
See Also backup, hot backup, warm backup.

column
A data item within a **row**, whose storage and semantics are defined by a data type. Each **table** and **index** is largely defined by the set of columns it contains.

Each column has a **cardinality** value. A column can be the **primary key** for its table, or part of the primary key. A column can be subject to a **unique constraint**, a **NOT NULL constraint**, or both. Values in different columns, even across different tables, can be linked by a **foreign key** relationship.

In discussions of MySQL internal operations, sometimes **field** is used as a synonym.
See Also cardinality, foreign key, index, NOT NULL constraint, primary key, row, table, unique constraint.

column index
An **index** on a single column.
See Also composite index, index.

column prefix
When an **index** is created with a length specification, such as `CREATE INDEX idx ON t1 (c1(N))`, only the first N characters of the column value are stored in the index. Keeping the index prefix small makes the index compact, and the memory and disk I/O savings help performance. (Although making the index prefix too small can hinder query optimization by making rows with different values appear to the query optimizer to be duplicates.)

For columns containing binary values or long text strings, where sorting is not a major consideration and storing the entire value in the index would waste space, the index automatically uses the first N (typically 768) characters of the value to do lookups and sorts.

See Also index.

commit
A **SQL** statement that ends a **transaction**, making permanent any changes made by the transaction. It is the opposite of **rollback**, which undoes any changes made in the transaction.

`InnoDB` uses an **optimistic** mechanism for commits, so that changes can be written to the data files before the commit actually occurs. This technique makes the commit itself faster, with the tradeoff that more work is required in case of a rollback.

By default, MySQL uses the **autocommit** setting, which automatically issues a commit following each SQL statement.
See Also autocommit, optimistic, rollback, SQL, transaction.

compact row format
A **row format** for InnoDB tables. It was the default row format from MySQL 5.0.3 to MySQL 5.7.8. In MySQL 8.0, the default row format is defined by the `innodb_default_row_format` configuration option, which has a default setting of **DYNAMIC**. The **COMPACT** row format provides a more compact representation for nulls and variable-length columns than the **REDUNDANT** row format.

For additional information about `InnoDB` `COMPACT` row format, see Section 15.10.4, “COMPACT and REDUNDANT Row Formats”.
See Also dynamic row format, file format, redundant row format, row format.

composite index
An **index** that includes multiple columns.
See Also index.

compressed backup
The compression feature of the **MySQL Enterprise Backup** product makes a compressed copy of each tablespace, changing the extension from `.ibd` to `.ibz`. Compressing backup data allows you to keep more backups on hand, and reduces the time to transfer backups to a different server. The data is uncompressed during the restore operation. When a compressed backup operation processes a table that is already compressed, it skips the compression step for that table, because compressing again would result in little or no space savings.

A set of files produced by the **MySQL Enterprise Backup** product, where each **tablespace** is compressed. The compressed files are renamed with a `.ibz` file extension.

Applying **compression** at the start of the backup process helps to avoid storage overhead during the compression process, and to avoid network overhead when transferring the backup files to another server. The process of **applying** the **binary log** takes longer, and requires uncompressing the backup files.
See Also apply, binary log, compression, hot backup, MySQL Enterprise Backup, tablespace.

compressed row format
A **row format** that enables data and index **compression** for `InnoDB` tables. Large fields are stored away from the page that holds the rest of the row data, as in **dynamic row format**. Both index pages and the large fields are compressed, yielding memory and disk savings. Depending on the structure of the data, the decrease in memory and disk usage might or might not outweigh the performance overhead of uncompressing the data as it is used. See Section 15.9, “InnoDB Table and Page Compression” for usage details.

For additional information about `InnoDB` `COMPRESSED` row format, see Section 15.10.3, “DYNAMIC and COMPRESSED Row Formats”.
See Also compression, dynamic row format, row format.

compressed table
A table for which the data is stored in compressed form. For `InnoDB`, it is a table created with `ROW_FORMAT=COMPRESSED`. See Section 15.9, “InnoDB Table and Page Compression” for more information.
See Also compressed row format, compression.

compression
A feature with wide-ranging benefits from using less disk space, performing less I/O, and using less memory for caching.

`InnoDB` supports both table-level and page-level compression. `InnoDB` page compression is also referred to as **transparent page compression**. For more information about `InnoDB` compression, see Section 15.9, "InnoDB Table and Page Compression".

Another type of compression is the **compressed backup** feature of the **MySQL Enterprise Backup** product.
See Also buffer pool, compressed backup, compressed row format, DML, transparent page compression.

compression failure
Not actually an error, rather an expensive operation that can occur when using **compression** in combination with **DML** operations. It occurs when: updates to a compressed **page** overflow the area on the page reserved for recording modifications; the page is compressed again, with all changes applied to the table data; the re-compressed data does not fit on the original page, requiring MySQL to split the data into two new pages and compress each one separately. To check the frequency of this condition, query the `INFORMATION_SCHEMA.INNODB_CMP` table and check how much the value of the `COMPRESS_OPS` column exceeds the value of the `COMPRESS_OPS_OK` column. Ideally, compression failures do not occur often; when they do, you can adjust the `innodb_compression_level`, `innodb_compression_failure_threshold_pct`, and `innodb_compression_pad_pct_max` configuration options.
See Also compression, DML, page.

concatenated index
See composite index.

concurrency
The ability of multiple operations (in database terminology, **transactions**) to run simultaneously, without interfering with each other. Concurrency is also involved with performance, because ideally the protection for multiple simultaneous transactions works with a minimum of performance overhead, using efficient mechanisms for **locking**.
See Also ACID, locking, transaction.

configuration file
The file that holds the **option** values used by MySQL at startup. Traditionally, on Linux and Unix this file is named `my.cnf`, and on Windows it is named `my.ini`. You can set a number of options related to InnoDB under the `[mysqld]` section of the file.

See Section 4.2.6, "Using Option Files" for information about where MySQL searches for configuration files.

When you use the **MySQL Enterprise Backup** product, you typically use two configuration files: one that specifies where the data comes from and how it is structured (which could be the original configuration file for your server), and a stripped-down one containing only a small set of options that specify where the backup data goes and how it is structured. The configuration files used with the **MySQL Enterprise Backup** product must contain certain options that are typically left out of regular configuration files, so you might need to add options to your existing configuration file for use with **MySQL Enterprise Backup**.
See Also my.cnf, MySQL Enterprise Backup, option, option file.

consistent read
A read operation that uses **snapshot** information to present query results based on a point in time, regardless of changes performed by other transactions running at the same time. If queried data has been changed by another transaction, the original data is reconstructed based on the contents of the **undo log**. This technique avoids some of the **locking** issues that can reduce **concurrency** by forcing transactions to wait for other transactions to finish.

With **REPEATABLE READ isolation level**, the snapshot is based on the time when the first read operation is performed. With **READ COMMITTED** isolation level, the snapshot is reset to the time of each consistent read operation.

Consistent read is the default mode in which `InnoDB` processes `SELECT` statements in **READ COMMITTED** and **REPEATABLE READ** isolation levels. Because a consistent read does not set any locks on the tables it accesses, other sessions are free to modify those tables while a consistent read is being performed on the table.

For technical details about the applicable isolation levels, see Section 15.5.2.3, “Consistent Nonlocking Reads”.
See Also concurrency, isolation level, locking, READ COMMITTED, REPEATABLE READ, snapshot, transaction, undo log.

constraint
An automatic test that can block database changes to prevent data from becoming inconsistent. (In computer science terms, a kind of assertion related to an invariant condition.) Constraints are a crucial component of the **ACID** philosophy, to maintain data consistency. Constraints supported by MySQL include **FOREIGN KEY constraints** and **unique constraints**.
See Also ACID, foreign key, unique constraint.

counter
A value that is incremented by a particular kind of `InnoDB` operation. Useful for measuring how busy a server is, troubleshooting the sources of performance issues, and testing whether changes (for example, to configuration settings or indexes used by queries) have the desired low-level effects. Different kinds of counters are available through **Performance Schema** tables and **INFORMATION_SCHEMA** tables, particularly `INFORMATION_SCHEMA.INNODB_METRICS`.
See Also INFORMATION_SCHEMA, metrics counter, Performance Schema.

covering index
An **index** that includes all the columns retrieved by a query. Instead of using the index values as pointers to find the full table rows, the query returns values from the index structure, saving disk I/O. `InnoDB` can apply this optimization technique to more indexes than MyISAM can, because `InnoDB` **secondary indexes** also include the **primary key** columns. `InnoDB` cannot apply this technique for queries against tables modified by a transaction, until that transaction ends.

Any **column index** or **composite index** could act as a covering index, given the right query. Design your indexes and queries to take advantage of this optimization technique wherever possible.
See Also column index, composite index, index, primary key, secondary index.

CPU-bound
A type of **workload** where the primary **bottleneck** is CPU operations in memory. Typically involves read-intensive operations where the results can all be cached in the **buffer pool**.
See Also bottleneck, buffer pool, workload.

crash
MySQL uses the term “crash” to refer generally to any unexpected **shutdown** operation where the server cannot do its normal cleanup. For example, a crash could happen due to a hardware fault on the database server machine or storage device; a power failure; a potential data mismatch that causes the MySQL server to halt; a **fast shutdown** initiated by the DBA; or many other reasons. The robust, automatic **crash recovery** for **InnoDB** tables ensures that data is made consistent when the server is restarted, without any extra work for the DBA.
See Also crash recovery, fast shutdown, InnoDB, shutdown.

crash recovery
The cleanup activities that occur when MySQL is started again after a **crash**. For **InnoDB** tables, changes from incomplete transactions are replayed using data from the **redo log**. Changes that were **committed** before the crash, but not yet written into the **data files**, are reconstructed from the **doublewrite buffer**. When the database is shut down normally, this type of activity is performed during shutdown by the **purge** operation.

During normal operation, committed data can be stored in the **change buffer** for a period of time before being written to the data files. There is always a tradeoff between keeping the data files up-to-date, which introduces performance overhead during normal operation, and buffering the data, which can make shutdown and crash recovery take longer.

See Also change buffer, commit, crash, data files, doublewrite buffer, InnoDB, purge, redo log.

CRUD
Acronym for “create, read, update, delete”, a common sequence of operations in database applications. Often denotes a class of applications with relatively simple database usage (basic **DDL**, **DML** and **query** statements in **SQL**) that can be implemented quickly in any language.
See Also DDL, DML, query, SQL.

cursor
An internal data structure that is used to represent the result set of a **query**, or other operation that performs a search using an SQL `WHERE` clause. It works like an iterator in other high-level languages, producing each value from the result set as requested.

Although SQL usually handles the processing of cursors for you, you might delve into the inner workings when dealing with performance-critical code.
See Also query.

D

data definition language
See DDL.

data dictionary
Metadata that keeps track of database objects such as **tables**, **indexes**, and table **columns**. For the MySQL data dictionary, introduced in MySQL 8.0, metadata is physically located in `InnoDB` **file-per-table** tablespace files in the `mysql` database directory. For the `InnoDB` data dictionary, metadata is physically located in the `InnoDB` **system tablespace**.

Because the **MySQL Enterprise Backup** product always backs up the `InnoDB` system tablespace, all backups include the contents of the `InnoDB` data dictionary.
See Also column, file-per-table, .frm file, index, MySQL Enterprise Backup, system tablespace, table.

data directory
The directory under which each MySQL **instance** keeps the **data files** for `InnoDB` and the directories representing individual databases. Controlled by the `datadir` configuration option.
See Also data files, instance.

data files
The files that physically contain **table** and **index** data.

The `InnoDB` **system tablespace**, which holds the `InnoDB` **data dictionary** and is capable of holding data for multiple `InnoDB` tables, is represented by one or more `.ibdata` data files.

File-per-table tablespaces, which hold data for a single `InnoDB` table, are represented by a `.ibd` data file.

General tablespaces (introduced in MySQL 5.7.6), which can hold data for multiple `InnoDB` tables, are also represented by a `.ibd` data file.
See Also data dictionary, file-per-table, general tablespace, .ibd file, ibdata file, index, system tablespace, table, tablespace.

data manipulation language
See DML.

data warehouse
A database system or application that primarily runs large **queries**. The read-only or read-mostly data might be organized in **denormalized** form for query efficiency. Can benefit from the optimizations for **read-only transactions** in MySQL 5.6 and higher. Contrast with **OLTP**.
See Also denormalized, OLTP, query, read-only transaction.

database
Within the MySQL **data directory**, each database is represented by a separate directory. The InnoDB **system tablespace**, which can hold table data from multiple databases within a MySQL **instance**, is kept

in **data files** that reside outside of individual database directories. When **file-per-table** mode is enabled, the **.ibd files** representing individual InnoDB tables are stored inside the database directories unless created elsewhere using the `DATA DIRECTORY` clause. General tablespaces, introduced in MySQL 5.7.6, also hold table data in **.ibd files**. Unlike file-per-table **.ibd files**, general tablespace **.ibd files** can hold table data from multiple databases within a MySQL **instance**, and can be assigned to directories relative to or independent of the MySQL data directory.

For long-time MySQL users, a database is a familiar notion. Users coming from an Oracle Database background will find that the MySQL meaning of a database is closer to what Oracle Database calls a **schema**.
See Also data files, file-per-table, .ibd file, instance, schema, system tablespace.

DCL
Data control language, a set of **SQL** statements for managing privileges. In MySQL, consists of the `GRANT` and `REVOKE` statements. Contrast with **DDL** and **DML**.
See Also DDL, DML, SQL.

DDL
Data definition language, a set of **SQL** statements for manipulating the database itself rather than individual table rows. Includes all forms of the `CREATE`, `ALTER`, and `DROP` statements. Also includes the `TRUNCATE` statement, because it works differently than a `DELETE FROM` *`table_name`* statement, even though the ultimate effect is similar.

DDL statements automatically **commit** the current **transaction**; they cannot be **rolled back**.

The `InnoDB` online DDL feature enhances performance for `CREATE INDEX`, `DROP INDEX`, and many types of `ALTER TABLE` operations. See Section 15.12, “InnoDB and Online DDL” for more information. Also, the `InnoDB` file-per-table setting can affect the behavior of `DROP TABLE` and `TRUNCATE TABLE` operations.

Contrast with **DML** and **DCL**.
See Also commit, DCL, DML, file-per-table, rollback, SQL, transaction.

deadlock
A situation where different **transactions** are unable to proceed, because each holds a **lock** that the other needs. Because both transactions are waiting for a resource to become available, neither will ever release the locks it holds.

A deadlock can occur when the transactions lock rows in multiple tables (through statements such as `UPDATE` or `SELECT ... FOR UPDATE`), but in the opposite order. A deadlock can also occur when such statements lock ranges of index records and **gaps**, with each transaction acquiring some locks but not others due to a timing issue.

For background information on how deadlocks are automatically detected and handled, see Section 15.5.5.2, “Deadlock Detection and Rollback”. For tips on avoiding and recovering from deadlock conditions, see Section 15.5.5.3, “How to Minimize and Handle Deadlocks”.
See Also gap, lock, transaction.

deadlock detection
A mechanism that automatically detects when a **deadlock** occurs, and automatically **rolls back** one of the **transactions** involved (the **victim**). Deadlock detection can be disabled using the `innodb_deadlock_detect` configuration option.
See Also deadlock, rollback, transaction, victim.

delete
When `InnoDB` processes a `DELETE` statement, the rows are immediately marked for deletion and no longer are returned by queries. The storage is reclaimed sometime later, during the periodic garbage collection known as the **purge** operation. For removing large quantities of data, related operations with their own performance characteristics are **TRUNCATE** and **DROP**.
See Also drop, purge, truncate.

delete buffering
The technique of storing changes to secondary index pages, resulting from `DELETE` operations, in the **change buffer** rather than writing the changes immediately, so that the physical writes can be performed to minimize random I/O. (Because delete operations are a two-step process, this operation buffers the write that normally marks an index record for deletion.) It is one of the types of **change buffering**; the others are **insert buffering** and **purge buffering**.
See Also change buffer, change buffering, insert buffer, insert buffering, purge buffering.

denormalized
A data storage strategy that duplicates data across different tables, rather than linking the tables with **foreign keys** and **join** queries. Typically used in **data warehouse** applications, where the data is not updated after loading. In such applications, query performance is more important than making it simple to maintain consistent data during updates. Contrast with **normalized**.
See Also data warehouse, foreign key, join, normalized.

descending index
A type of **index** where index storage is optimized to process `ORDER BY column DESC` clauses.
See Also index.

dictionary object cache
The dictionary object cache stores previously accessed **data dictionary** objects in memory to enable object reuse and minimize disk I/O. An **LRU**-based eviction strategy is used to evict least recently used objects from memory. The cache is comprised of several partitions that store different object types.

For more information, see Section 14.4, “Dictionary Object Cache”.
See Also data dictionary, LRU.

dirty page
A **page** in the `InnoDB` **buffer pool** that has been updated in memory, where the changes are not yet written (**flushed**) to the **data files**. The opposite of a **clean page**.
See Also buffer pool, clean page, data files, flush, page.

dirty read
An operation that retrieves unreliable data, data that was updated by another transaction but not yet **committed**. It is only possible with the **isolation level** known as **read uncommitted**.

This kind of operation does not adhere to the **ACID** principle of database design. It is considered very risky, because the data could be **rolled back**, or updated further before being committed; then, the transaction doing the dirty read would be using data that was never confirmed as accurate.

Its opposite is **consistent read**, where `InnoDB` ensures that a transaction does not read information updated by another transaction, even if the other transaction commits in the meantime.
See Also ACID, commit, consistent read, isolation level, READ UNCOMMITTED, rollback.

disk-based
A kind of database that primarily organizes data on disk storage (hard drives or equivalent). Data is brought back and forth between disk and memory to be operated upon. It is the opposite of an **in-memory database**. Although `InnoDB` is disk-based, it also contains features such as he **buffer pool**, multiple buffer pool instances, and the **adaptive hash index** that allow certain kinds of workloads to work primarily from memory.
See Also adaptive hash index, buffer pool, in-memory database.

disk-bound
A type of **workload** where the primary **bottleneck** is disk I/O. (Also known as **I/O-bound**.) Typically involves frequent writes to disk, or random reads of more data than can fit into the **buffer pool**.
See Also bottleneck, buffer pool, workload.

DML
Data manipulation language, a set of **SQL** statements for performing `INSERT`, `UPDATE`, and `DELETE` operations. The `SELECT` statement is sometimes considered as a DML statement, because the `SELECT ... FOR UPDATE` form is subject to the same considerations for **locking** as `INSERT`, `UPDATE`, and `DELETE`.

DML statements for an InnoDB table operate in the context of a **transaction**, so their effects can be **committed** or **rolled back** as a single unit.

Contrast with **DDL** and **DCL**.
See Also commit, DCL, DDL, locking, rollback, SQL, transaction.

document id
In the InnoDB **full-text search** feature, a special column in the table containing the **FULLTEXT index**, to uniquely identify the document associated with each **ilist** value. Its name is FTS_DOC_ID (uppercase required). The column itself must be of BIGINT UNSIGNED NOT NULL type, with a unique index named FTS_DOC_ID_INDEX. Preferably, you define this column when creating the table. If InnoDB must add the column to the table while creating a FULLTEXT index, the indexing operation is considerably more expensive.
See Also full-text search, FULLTEXT index, ilist.

doublewrite buffer
InnoDB uses a file flush technique called doublewrite. Before writing **pages** to the **data files**, InnoDB first writes them to a contiguous area called the doublewrite buffer. Only after the write and the flush to the doublewrite buffer have completed, does InnoDB write the pages to their proper positions in the data file. If there is an operating system, storage subsystem, or mysqld process crash in the middle of a page write, InnoDB can later find a good copy of the page from the doublewrite buffer during **crash recovery**.

Although data is always written twice, the doublewrite buffer does not require twice as much I/O overhead or twice as many I/O operations. Data is written to the buffer itself as a large sequential chunk, with a single fsync() call to the operating system.

To turn off the doublewrite buffer, specify the option innodb_doublewrite=0.
See Also crash recovery, data files, page, purge.

drop
A kind of **DDL** operation that removes a schema object, through a statement such as DROP TABLE or DROP INDEX. It maps internally to an ALTER TABLE statement. From an InnoDB perspective, the performance considerations of such operations involve the time that the **data dictionary** is locked to ensure that interrelated objects are all updated, and the time to update memory structures such as the **buffer pool**. For a **table**, the drop operation has somewhat different characteristics than a **truncate** operation (TRUNCATE TABLE statement).
See Also buffer pool, data dictionary, DDL, table, truncate.

dynamic row format
An InnoDB row format. Because long variable-length column values are stored outside of the page that holds the row data, it is very efficient for rows that include large objects. Since the large fields are typically not accessed to evaluate query conditions, they are not brought into the **buffer pool** as often, resulting in fewer I/O operations and better utilization of cache memory.

As of MySQL 5.7.9, the default row format is defined by innodb_default_row_format, which has a default value of DYNAMIC.

For additional information about InnoDB DYNAMIC row format, see Section 15.10.3, “DYNAMIC and COMPRESSED Row Formats”.
See Also buffer pool, file format, row format.

E

early adopter
A stage similar to **beta**, when a software product is typically evaluated for performance, functionality, and compatibility in a non-mission-critical setting.
See Also beta.

error log
A type of **log** showing information about MySQL startup and critical runtime errors and **crash** information. For details, see Section 5.4.2, “The Error Log”.

See Also crash, log.

eviction
The process of removing an item from a cache or other temporary storage area, such as the `InnoDB` **buffer pool**. Often, but not always, uses the **LRU** algorithm to determine which item to remove. When a **dirty page** is evicted, its contents are **flushed** to disk, and any dirty **neighbor pages** might be flushed also.
See Also buffer pool, dirty page, flush, LRU, neighbor page.

exclusive lock
A kind of **lock** that prevents any other **transaction** from locking the same row. Depending on the transaction **isolation level**, this kind of lock might block other transactions from writing to the same row, or might also block other transactions from reading the same row. The default `InnoDB` isolation level, **REPEATABLE READ**, enables higher **concurrency** by allowing transactions to read rows that have exclusive locks, a technique known as **consistent read**.
See Also concurrency, consistent read, isolation level, lock, REPEATABLE READ, shared lock, transaction.

extent
A group of **pages** within a **tablespace**. For the default **page size** of 16KB, an extent contains 64 pages. In MySQL 5.6, the page size for an `InnoDB` instance can be 4KB, 8KB, or 16KB, controlled by the `innodb_page_size` configuration option. For 4KB, 8KB, and 16KB pages sizes, the extent size is always 1MB (or 1048576 bytes).

Support for 32KB and 64KB `InnoDB` page sizes was added in MySQL 5.7.6. For a 32KB page size, the extent size is 2MB. For a 64KB page size, the extent size is 4MB.

`InnoDB` features such as **segments**, **read-ahead** requests and the **doublewrite buffer** use I/O operations that read, write, allocate, or free data one extent at a time.
See Also doublewrite buffer, page, page size, read-ahead, segment, tablespace.

F

.frm file
A file containing the metadata, such as the table definition, of a MySQL table. `.frm` files were removed in MySQL 8.0 but are still used in earlier MySQL releases. In MySQL 8.0, data previously stored in `.frm` files is stored in **data dictionary** tables.
See Also data dictionary, MySQL Enterprise Backup, system tablespace.

fanout
The increase or decrease in number of rows from adding a table during join processing. Suppose that a query of the form `SELECT ... FROM t1 INNER JOIN t2 ...` selects rows from table `t1`, then `t2`.

- If the join selects one row from `t2` per row in `t1`, the fanout for `t2` is 1.
- If the join selects two rows from `t2` per row in `t1`, the fanout for `t2` is 2.
- If the join selects one row from `t2` per two rows in `t1`, the fanout for `t2` is .5.

Fast Index Creation
A capability first introduced in the InnoDB Plugin, now part of MySQL in 5.5 and higher, that speeds up creation of `InnoDB` **secondary indexes** by avoiding the need to completely rewrite the associated table. The speedup applies to dropping secondary indexes also.

Because index maintenance can add performance overhead to many data transfer operations, consider doing operations such as `ALTER TABLE ... ENGINE=INNODB` or `INSERT INTO ... SELECT * FROM ...` without any secondary indexes in place, and creating the indexes afterward.

In MySQL 5.6, this feature becomes more general. You can read and write to tables while an index is being created, and many more kinds of `ALTER TABLE` operations can be performed without copying the table, without blocking **DML** operations, or both. Thus in MySQL 5.6 and higher, this set of features is referred to as **online DDL** rather than Fast Index Creation.

For related information, see InnoDB Fast Index Creation, and Section 15.12, “InnoDB and Online DDL”.
See Also DML, index, online DDL, secondary index.

fast shutdown
The default **shutdown** procedure for `InnoDB`, based on the configuration setting `innodb_fast_shutdown=1`. To save time, certain **flush** operations are skipped. This type of shutdown is safe during normal usage, because the flush operations are performed during the next startup, using the same mechanism as in **crash recovery**. In cases where the database is being shut down for an upgrade or downgrade, do a **slow shutdown** instead to ensure that all relevant changes are applied to the **data files** during the shutdown.
See Also crash recovery, data files, flush, shutdown, slow shutdown.

file format
The file format for `InnoDB` tables.
See Also file-per-table, .ibd file, ibdata file, row format.

file-per-table
A general name for the setting controlled by the `innodb_file_per_table` option, which is an important configuration option that affects aspects of `InnoDB` file storage, availability of features, and I/O characteristics. As of MySQL 5.6.7, `innodb_file_per_table` is enabled by default.

With the `innodb_file_per_table` option enabled, you can create a table in its own **.ibd file** rather than in the shared **ibdata files** of the **system tablespace**. When table data is stored in an individual **.ibd file**, you have more flexibility to choose **row formats** required for features such as data **compression**. The `TRUNCATE TABLE` operation is also faster, and reclaimed space can be used by the operating system rather than remaining reserved for `InnoDB`.

The **MySQL Enterprise Backup** product is more flexible for tables that are in their own files. For example, tables can be excluded from a backup, but only if they are in separate files. Thus, this setting is suitable for tables that are backed up less frequently or on a different schedule.
See Also compressed row format, compression, file format, .ibd file, ibdata file, innodb_file_per_table, MySQL Enterprise Backup, row format, system tablespace.

fill factor
In an `InnoDB` **index**, the proportion of a **page** that is taken up by index data before the page is split. The unused space when index data is first divided between pages allows for rows to be updated with longer string values without requiring expensive index maintenance operations. If the fill factor is too low, the index consumes more space than needed, causing extra I/O overhead when reading the index. If the fill factor is too high, any update that increases the length of column values can cause extra I/O overhead for index maintenance. See Section 15.8.2.2, “The Physical Structure of an InnoDB Index” for more information.
See Also index, page.

fixed row format
This row format is used by the `MyISAM` storage engine, not by `InnoDB`. If you create an `InnoDB` table with the option `ROW_FORMAT=FIXED` in MySQL 5.7.6 or earlier, `InnoDB` uses the **compact row format** instead, although the `FIXED` value might still show up in output such as `SHOW TABLE STATUS` reports. As of MySQL 5.7.7, `InnoDB` returns an error if `ROW_FORMAT=FIXED` is specified.
See Also compact row format, row format.

flush
To write changes to the database files, that had been buffered in a memory area or a temporary disk storage area. The `InnoDB` storage structures that are periodically flushed include the **redo log**, the **undo log**, and the **buffer pool**.

Flushing can happen because a memory area becomes full and the system needs to free some space, because a **commit** operation means the changes from a transaction can be finalized, or because a **slow shutdown** operation means that all outstanding work should be finalized. When it is not critical to flush all the buffered data at once, `InnoDB` can use a technique called **fuzzy checkpointing** to flush small batches of pages to spread out the I/O overhead.

See Also buffer pool, commit, fuzzy checkpointing, redo log, slow shutdown, undo log.

flush list
An internal `InnoDB` data structure that tracks **dirty pages** in the **buffer pool**: that is, **pages** that have been changed and need to be written back out to disk. This data structure is updated frequently by `InnoDB` internal **mini-transactions**, and so is protected by its own **mutex** to allow concurrent access to the buffer pool.
See Also buffer pool, dirty page, LRU, mini-transaction, mutex, page, page cleaner.

foreign key
A type of pointer relationship, between rows in separate `InnoDB` tables. The foreign key relationship is defined on one column in both the **parent table** and the **child table**.

In addition to enabling fast lookup of related information, foreign keys help to enforce **referential integrity**, by preventing any of these pointers from becoming invalid as data is inserted, updated, and deleted. This enforcement mechanism is a type of **constraint**. A row that points to another table cannot be inserted if the associated foreign key value does not exist in the other table. If a row is deleted or its foreign key value changed, and rows in another table point to that foreign key value, the foreign key can be set up to prevent the deletion, cause the corresponding column values in the other table to become **null**, or automatically delete the corresponding rows in the other table.

One of the stages in designing a **normalized** database is to identify data that is duplicated, separate that data into a new table, and set up a foreign key relationship so that the multiple tables can be queried like a single table, using a **join** operation.
See Also child table, FOREIGN KEY constraint, join, normalized, NULL, parent table, referential integrity, relational.

FOREIGN KEY constraint
The type of **constraint** that maintains database consistency through a **foreign key** relationship. Like other kinds of constraints, it can prevent data from being inserted or updated if data would become inconsistent; in this case, the inconsistency being prevented is between data in multiple tables. Alternatively, when a **DML** operation is performed, `FOREIGN KEY` constraints can cause data in **child rows** to be deleted, changed to different values, or set to **null**, based on the `ON CASCADE` option specified when creating the foreign key.
See Also child table, constraint, DML, foreign key, NULL.

FTS
In most contexts, an acronym for **full-text search**. Sometimes in performance discussions, an acronym for **full table scan**.
See Also full table scan, full-text search.

full backup
A **backup** that includes all the **tables** in each MySQL **database**, and all the databases in a MySQL **instance**. Contrast with **partial backup**.
See Also backup, database, instance, partial backup, table.

full table scan
An operation that requires reading the entire contents of a table, rather than just selected portions using an **index**. Typically performed either with small lookup tables, or in data warehousing situations with large tables where all available data is aggregated and analyzed. How frequently these operations occur, and the sizes of the tables relative to available memory, have implications for the algorithms used in query optimization and managing the **buffer pool**.

The purpose of indexes is to allow lookups for specific values or ranges of values within a large table, thus avoiding full table scans when practical.
See Also buffer pool, index.

full-text search
The MySQL feature for finding words, phrases, Boolean combinations of words, and so on within table data, in a faster, more convenient, and more flexible way than using the SQL `LIKE` operator or writing your own application-level search algorithm. It uses the SQL function `MATCH()` and **FULLTEXT indexes**.
See Also FULLTEXT index.

FULLTEXT index
The special kind of **index** that holds the **search index** in the MySQL **full-text search** mechanism. Represents the words from values of a column, omitting any that are specified as **stopwords**. Originally, only available for `MyISAM` tables. Starting in MySQL 5.6.4, it is also available for **InnoDB** tables.
See Also full-text search, index, InnoDB, search index, stopword.

fuzzy checkpointing
A technique that **flushes** small batches of **dirty pages** from the **buffer pool**, rather than flushing all dirty pages at once which would disrupt database processing.
See Also buffer pool, dirty page, flush.

G

GA
"Generally available", the stage when a software product leaves **beta** and is available for sale, official support, and production use.
See Also beta.

gap
A place in an `InnoDB` **index** data structure where new values could be inserted. When you lock a set of rows with a statement such as `SELECT ... FOR UPDATE`, `InnoDB` can create locks that apply to the gaps as well as the actual values in the index. For example, if you select all values greater than 10 for update, a gap lock prevents another transaction from inserting a new value that is greater than 10. The **supremum record** and **infimum record** represent the gaps containing all values greater than or less than all the current index values.
See Also concurrency, gap lock, index, infimum record, isolation level, supremum record.

gap lock
A **lock** on a **gap** between index records, or a lock on the gap before the first or after the last index record. For example, `SELECT c1 FROM t WHERE c1 BETWEEN 10 and 20 FOR UPDATE;` prevents other transactions from inserting a value of 15 into the column `t.c1`, whether or not there was already any such value in the column, because the gaps between all existing values in the range are locked. Contrast with **record lock** and **next-key lock**.

Gap locks are part of the tradeoff between performance and **concurrency**, and are used in some transaction **isolation levels** and not others.
See Also gap, infimum record, lock, next-key lock, record lock, supremum record.

general log
See general query log.

general query log
A type of **log** used for diagnosis and troubleshooting of SQL statements processed by the MySQL server. Can be stored in a file or in a database table. You must enable this feature through the `general_log` configuration option to use it. You can disable it for a specific connection through the `sql_log_off` configuration option.

Records a broader range of queries than the **slow query log**. Unlike the **binary log**, which is used for replication, the general query log contains `SELECT` statements and does not maintain strict ordering. For more information, see Section 5.4.3, "The General Query Log".
See Also binary log, log, slow query log.

general tablespace
A shared `InnoDB` **tablespace** created using `CREATE TABLESPACE` syntax. General tablespaces can be created outside of the MySQL data directory, are capable of holding multiple **tables**, and support tables of all row formats. General tablespaces were introduced in MySQL 5.7.6.

Tables are added to a general tablespace using `CREATE TABLE` *`tbl_name`* `... TABLESPACE [=]` *`tablespace_name`* or `ALTER TABLE` *`tbl_name`* `TABLESPACE [=]` *`tablespace_name`* syntax.

Contrast with **system tablespace** and **file-per-table** tablespace.

For more information, see Section 15.7.10, “InnoDB General Tablespaces”.
See Also file-per-table, system tablespace, table, tablespace.

generated column
A column whose values are computed from an expression included in the column definition. A generated column can be **virtual** or **stored**.
See Also base column, stored generated column, virtual generated column.

generated stored column
See stored generated column.

generated virtual column
See virtual generated column.

global transaction
A type of **transaction** involved in **XA** operations. It consists of several actions that are transactional in themselves, but that all must either complete successfully as a group, or all be rolled back as a group. In essence, this extends **ACID** properties “up a level” so that multiple ACID transactions can be executed in concert as components of a global operation that also has ACID properties.
See Also ACID, transaction, XA.

group commit
An `InnoDB` optimization that performs some low-level I/O operations (log write) once for a set of **commit** operations, rather than flushing and syncing separately for each commit.
See Also binary log, commit.

H

hash index
A type of **index** intended for queries that use equality operators, rather than range operators such as greater-than or `BETWEEN`. It is available for `MEMORY` tables. Although hash indexes are the default for `MEMORY` tables for historic reasons, that storage engine also supports **B-tree** indexes, which are often a better choice for general-purpose queries.

MySQL includes a variant of this index type, the **adaptive hash index**, that is constructed automatically for `InnoDB` tables if needed based on runtime conditions.
See Also adaptive hash index, B-tree, index, InnoDB.

HDD
Acronym for “hard disk drive”. Refers to storage media using spinning platters, usually when comparing and contrasting with **SSD**. Its performance characteristics can influence the throughput of a **disk-based** workload.
See Also disk-based, SSD.

heartbeat
A periodic message that is sent to indicate that a system is functioning properly. In a **replication** context, if the **master** stops sending such messages, one of the **slaves** can take its place. Similar techniques can be used between the servers in a cluster environment, to confirm that all of them are operating properly.
See Also master server, replication.

high-water mark
A value representing an upper limit, either a hard limit that should not be exceeded at runtime, or a record of the maximum value that was actually reached. Contrast with **low-water mark**.
See Also low-water mark.

history list
A list of **transactions** with delete-marked records scheduled to be processed by the `InnoDB` **purge** operation. Recorded in the **undo log**. The length of the history list is reported by the command `SHOW`

`ENGINE INNODB STATUS`. If the history list grows longer than the value of the `innodb_max_purge_lag` configuration option, each **DML** operation is delayed slightly to allow the purge operation to finish **flushing** the deleted records.

Also known as **purge lag**.
See Also DML, flush, purge, purge lag, rollback segment, transaction, undo log.

hole punching
Releasing empty blocks from a page. The `InnoDB` **transparent page compression** feature relies on hole punching support. For more information, see Section 15.9.2, “InnoDB Page Compression”.
See Also sparse file, transparent page compression.

hot
A condition where a row, table, or internal data structure is accessed so frequently, requiring some form of locking or mutual exclusion, that it results in a performance or scalability issue.

Although “hot” typically indicates an undesirable condition, a **hot backup** is the preferred type of backup.
See Also hot backup.

hot backup
A backup taken while the database is running and applications are reading and writing to it. The backup involves more than simply copying data files: it must include any data that was inserted or updated while the backup was in process; it must exclude any data that was deleted while the backup was in process; and it must ignore any changes that were not committed.

The Oracle product that performs hot backups, of `InnoDB` tables especially but also tables from `MyISAM` and other storage engines, is known as **MySQL Enterprise Backup**.

The hot backup process consists of two stages. The initial copying of the data files produces a **raw backup**. The **apply** step incorporates any changes to the database that happened while the backup was running. Applying the changes produces a **prepared** backup; these files are ready to be restored whenever necessary.
See Also apply, MySQL Enterprise Backup, prepared backup, raw backup.

I

.ibd file
The data file for **file-per-table** tablespaces and general tablespaces. File-per-table tablespace `.idb` files contain a single table and associated index data. **General tablespace** `.idb` files may contain table and index data for multiple tables.

The `.ibd` file extension does not apply to the **system tablespace**, which consists of one or more **ibdata files**.

If a file-per-table tablespace or general tablespace is created with the `DATA DIRECTORY =` clause, the `.ibd` file is located at the specified path, outside the normal data directory.

When a `.ibd` file is included in a compressed backup by the **MySQL Enterprise Backup** product, the compressed equivalent is a `.ibz` file.
See Also database, file-per-table, general tablespace, ibdata file, .ibz file, innodb_file_per_table, MySQL Enterprise Backup, system tablespace.

.ibz file
When the **MySQL Enterprise Backup** product performs a **compressed backup**, it transforms each **tablespace** file that is created using the **file-per-table** setting from a `.ibd` extension to a `.ibz` extension.

The compression applied during backup is distinct from the **compressed row format** that keeps table data compressed during normal operation. A compressed backup operation skips the compression step for a tablespace that is already in compressed row format, as compressing a second time would slow down the backup but produce little or no space savings.

See Also compressed backup, compressed row format, file-per-table, .ibd file, MySQL Enterprise Backup, tablespace.

I/O-bound
See disk-bound.

ib-file set
The set of files managed by InnoDB within a MySQL database: the **system tablespace**, **file-per-table** tablespace files, and **redo log** files. Depending on MySQL version and InnoDB configuration, may also include **general tablespace**, **temporary tablespace**, and **undo tablespace** files. This term is sometimes used in detailed discussions of InnoDB file structures and formats to refer to the set of files managed by InnoDB within a MySQL database.
See Also database, file-per-table, general tablespace, redo log, system tablespace, temporary tablespace, undo tablespace.

ibbackup_logfile
A supplemental backup file created by the **MySQL Enterprise Backup** product during a **hot backup** operation. It contains information about any data changes that occurred while the backup was running. The initial backup files, including ibbackup_logfile, are known as a **raw backup**, because the changes that occurred during the backup operation are not yet incorporated. After you perform the **apply** step to the raw backup files, the resulting files do include those final data changes, and are known as a **prepared backup**. At this stage, the ibbackup_logfile file is no longer necessary.
See Also apply, hot backup, MySQL Enterprise Backup, prepared backup, raw backup.

ibdata file
A set of files with names such as ibdata1, ibdata2, and so on, that make up the InnoDB **system tablespace**. These files contain metadata about InnoDB tables, (the InnoDB **data dictionary**), and the storage areas for one or more **undo logs**, the **change buffer**, and the **doublewrite buffer**. They also can contain some or all of the table data also (depending on whether the **file-per-table** mode is in effect when each table is created). When the **innodb_file_per_table** option is enabled, data and indexes for newly created tables are stored in separate **.ibd files** rather than in the system tablespace.

The growth of the ibdata files is influenced by the innodb_autoextend_increment configuration option.
See Also change buffer, data dictionary, doublewrite buffer, file-per-table, .ibd file, innodb_file_per_table, system tablespace, undo log.

ibtmp file
The InnoDB **temporary tablespace data file** for non-compressed InnoDB **temporary tables** and related objects. The configuration file option, innodb_temp_data_file_path, allows users to define a relative path for the temporary tablespace data file. If innodb_temp_data_file_path is not specified, the default behavior is to create a single auto-extending 12MB data file named ibtmp1 in the data directory, alongside ibdata1.
See Also data files, temporary table, temporary tablespace.

ib_logfile
A set of files, typically named ib_logfile0 and ib_logfile1, that form the **redo log**. Also sometimes referred to as the **log group**. These files record statements that attempt to change data in InnoDB tables. These statements are replayed automatically to correct data written by incomplete transactions, on startup following a crash.

This data cannot be used for manual recovery; for that type of operation, use the **binary log**.
See Also binary log, log group, redo log.

ilist
Within an InnoDB **FULLTEXT index**, the data structure consisting of a document ID and positional information for a token (that is, a particular word).
See Also FULLTEXT index.

implicit row lock
A row lock that InnoDB acquires to ensure consistency, without you specifically requesting it.

See Also row lock.

in-memory database
A type of database system that maintains data in memory, to avoid overhead due to disk I/O and translation between disk blocks and memory areas. Some in-memory databases sacrifice durability (the “D” in the **ACID** design philosophy) and are vulnerable to hardware, power, and other types of failures, making them more suitable for read-only operations. Other in-memory databases do use durability mechanisms such as logging changes to disk or using non-volatile memory.

MySQL features that address the same kinds of memory-intensive processing include the `InnoDB` **buffer pool**, **adaptive hash index**, and **read-only transaction** optimization, the `MEMORY` storage engine, the `MyISAM` key cache, and the MySQL query cache.
See Also ACID, adaptive hash index, buffer pool, disk-based, read-only transaction.

incremental backup
A type of **hot backup**, performed by the **MySQL Enterprise Backup** product, that only saves data changed since some point in time. Having a full backup and a succession of incremental backups lets you reconstruct backup data over a long period, without the storage overhead of keeping several full backups on hand. You can restore the full backup and then apply each of the incremental backups in succession, or you can keep the full backup up-to-date by applying each incremental backup to it, then perform a single restore operation.

The granularity of changed data is at the **page** level. A page might actually cover more than one row. Each changed page is included in the backup.
See Also hot backup, MySQL Enterprise Backup, page.

index
A data structure that provides a fast lookup capability for **rows** of a **table**, typically by forming a tree structure (**B-tree)** representing all the values of a particular **column** or set of columns.

`InnoDB` tables always have a **clustered index** representing the **primary key**. They can also have one or more **secondary indexes** defined on one or more columns. Depending on their structure, secondary indexes can be classified as **partial**, **column**, or **composite** indexes.

Indexes are a crucial aspect of **query** performance. Database architects design tables, queries, and indexes to allow fast lookups for data needed by applications. The ideal database design uses a **covering index** where practical; the query results are computed entirely from the index, without reading the actual table data. Each **foreign key** constraint also requires an index, to efficiently check whether values exist in both the **parent** and **child** tables.

Although a B-tree index is the most common, a different kind of data structure is used for **hash indexes**, as in the `MEMORY` storage engine and the `InnoDB` **adaptive hash index**. **R-tree** indexes are used for spatial indexing of multi-dimensional information.
See Also adaptive hash index, B-tree, child table, clustered index, column index, composite index, covering index, foreign key, hash index, parent table, partial index, primary key, query, R-tree, row, secondary index, table.

index cache
A memory area that holds the token data for `InnoDB` **full-text search**. It buffers the data to minimize disk I/O when data is inserted or updated in columns that are part of a **FULLTEXT index**. The token data is written to disk when the index cache becomes full. Each `InnoDB` `FULLTEXT` index has its own separate index cache, whose size is controlled by the configuration option `innodb_ft_cache_size`.
See Also full-text search, FULLTEXT index.

index condition pushdown
Index condition pushdown (ICP) is an optimization that pushes part of a `WHERE` condition down to the storage engine if parts of the condition can be evaluated using fields from the **index**. ICP can reduce the number of times the **storage engine** must access the base table and the number of times the MySQL server must access the storage engine. For more information, see Section 8.2.1.5, “Index Condition Pushdown Optimization”.
See Also index, storage engine.

index hint
Extended SQL syntax for overriding the **indexes** recommended by the optimizer. For example, the `FORCE INDEX`, `USE INDEX`, and `IGNORE INDEX` clauses. Typically used when indexed columns have unevenly distributed values, resulting in inaccurate **cardinality** estimates.
See Also cardinality, index.

index prefix
In an **index** that applies to multiple columns (known as a **composite index**), the initial or leading columns of the index. A query that references the first 1, 2, 3, and so on columns of a composite index can use the index, even if the query does not reference all the columns in the index.
See Also composite index, index.

index statistics
See statistics.

infimum record
A **pseudo-record** in an **index**, representing the **gap** below the smallest value in that index. If a transaction has a statement such as `SELECT ... FROM ... WHERE col < 10 FOR UPDATE;`, and the smallest value in the column is 5, it is a lock on the infimum record that prevents other transactions from inserting even smaller values such as 0, -10, and so on.
See Also gap, index, pseudo-record, supremum record.

INFORMATION_SCHEMA
The name of the **database** that provides a query interface to the MySQL **data dictionary**. (This name is defined by the ANSI SQL standard.) To examine information (metadata) about the database, you can query tables such as `INFORMATION_SCHEMA.TABLES` and `INFORMATION_SCHEMA.COLUMNS`, rather than using `SHOW` commands that produce unstructured output.

The `INFORMATION_SCHEMA` database also contains tables specific to **InnoDB** that provide a query interface to the `InnoDB` data dictionary. You use these tables not to see how the database is structured, but to get real-time information about the workings of `InnoDB` tables to help with performance monitoring, tuning, and troubleshooting.
See Also data dictionary, database, InnoDB.

InnoDB
A MySQL component that combines high performance with **transactional** capability for reliability, robustness, and concurrent access. It embodies the **ACID** design philosophy. Represented as a **storage engine**; it handles tables created or altered with the `ENGINE=INNODB` clause. See Chapter 15, *The InnoDB Storage Engine* for architectural details and administration procedures, and Section 8.5, “Optimizing for InnoDB Tables” for performance advice.

In MySQL 5.5 and higher, `InnoDB` is the default storage engine for new tables and the `ENGINE=INNODB` clause is not required.

`InnoDB` tables are ideally suited for **hot backups**. See Section 29.2, “MySQL Enterprise Backup Overview” for information about the **MySQL Enterprise Backup** product for backing up MySQL servers without interrupting normal processing.
See Also ACID, hot backup, MySQL Enterprise Backup, storage engine, transaction.

innodb_autoinc_lock_mode
The `innodb_autoinc_lock_mode` option controls the algorithm used for **auto-increment locking**. When you have an auto-incrementing **primary key**, you can use statement-based replication only with the setting `innodb_autoinc_lock_mode=1`. This setting is known as *consecutive* lock mode, because multi-row inserts within a transaction receive consecutive auto-increment values. If you have `innodb_autoinc_lock_mode=2`, which allows higher concurrency for insert operations, use row-based replication rather than statement-based replication. This setting is known as *interleaved* lock mode, because multiple multi-row insert statements running at the same time can receive **auto-increment** values that are interleaved. The setting `innodb_autoinc_lock_mode=0` should not be used except for compatibility purposes.

Consecutive lock mode (`innodb_autoinc_lock_mode=1`) is the default setting prior to MySQL 8.0.3. As of MySQL 8.0.3, interleaved lock mode (`innodb_autoinc_lock_mode=2`) is the default, which reflects the change from statement-based to row-based replication as the default replication type.
See Also auto-increment, auto-increment locking, mixed-mode insert, primary key.

innodb_file_per_table
An important configuration option that affects many aspects of `InnoDB` file storage, availability of features, and I/O characteristics. In MySQL 5.6.7 and higher, it is enabled by default. The `innodb_file_per_table` option turns on **file-per-table** mode. With this mode enabled, a newly created `InnoDB` table and associated indexes can be stored in a file-per-table **.ibd file**, outside the **system tablespace**.

This option affects the performance and storage considerations for a number of SQL statements, such as `DROP TABLE` and `TRUNCATE TABLE`.

Enabling the `innodb_file_per_table` option allows you to take advantage of features such as table **compression** and named-table backups in **MySQL Enterprise Backup**.

For more information, see `innodb_file_per_table`, and Section 15.7.4, “InnoDB File-Per-Table Tablespaces”.
See Also compression, file-per-table, .ibd file, MySQL Enterprise Backup, system tablespace.

innodb_lock_wait_timeout
The `innodb_lock_wait_timeout` option sets the balance between **waiting** for shared resources to become available, or giving up and handling the error, retrying, or doing alternative processing in your application. Rolls back any `InnoDB` transaction that waits more than a specified time to acquire a **lock**. Especially useful if **deadlocks** are caused by updates to multiple tables controlled by different storage engines; such deadlocks are not **detected** automatically.
See Also deadlock, deadlock detection, lock, wait.

innodb_strict_mode
The `innodb_strict_mode` option controls whether `InnoDB` operates in **strict mode**, where conditions that are normally treated as warnings, cause errors instead (and the underlying statements fail).
See Also strict mode.

insert
One of the primary **DML** operations in **SQL**. The performance of inserts is a key factor in **data warehouse** systems that load millions of rows into tables, and **OLTP** systems where many concurrent connections might insert rows into the same table, in arbitrary order. If insert performance is important to you, you should learn about **InnoDB** features such as the **insert buffer** used in **change buffering**, and **auto-increment** columns.
See Also auto-increment, change buffering, data warehouse, DML, InnoDB, insert buffer, OLTP, SQL.

insert buffer
The former name of the **change buffer**. In MySQL 5.5, support was added for buffering changes to secondary index pages for `DELETE` and `UPDATE` operations. Previously, only changes resulting from `INSERT` operations were buffered. The preferred term is now *change buffer*.
See Also change buffer, change buffering.

insert buffering
The technique of storing changes to secondary index pages, resulting from `INSERT` operations, in the **change buffer** rather than writing the changes immediately, so that the physical writes can be performed to minimize random I/O. It is one of the types of **change buffering**; the others are **delete buffering** and **purge buffering**.

Insert buffering is not used if the secondary index is **unique**, because the uniqueness of new values cannot be verified before the new entries are written out. Other kinds of change buffering do work for unique indexes.
See Also change buffer, change buffering, delete buffering, insert buffer, purge buffering, unique index.

insert intention lock
A type of **gap lock** that is set by `INSERT` operations prior to row insertion. This type of **lock** signals the intent to insert in such a way that multiple transactions inserting into the same index gap need not wait for each

other if they are not inserting at the same position within the gap. For more information, see Section 15.5.1, “InnoDB Locking”.
See Also gap lock, lock, next-key lock.

instance
A single **mysqld** daemon managing a **data directory** representing one or more **databases** with a set of **tables**. It is common in development, testing, and some **replication** scenarios to have multiple instances on the same **server** machine, each managing its own data directory and listening on its own port or socket. With one instance running a **disk-bound** workload, the server might still have extra CPU and memory capacity to run additional instances.
See Also data directory, database, disk-bound, mysqld, replication, server, table.

instrumentation
Modifications at the source code level to collect performance data for tuning and debugging. In MySQL, data collected by instrumentation is exposed through an SQL interface using the `INFORMATION_SCHEMA` and `PERFORMANCE_SCHEMA` databases.
See Also INFORMATION_SCHEMA, Performance Schema.

intention exclusive lock
See intention lock.

intention lock
A kind of **lock** that applies to the table, used to indicate the kind of lock the **transaction** intends to acquire on rows in the table. Different transactions can acquire different kinds of intention locks on the same table, but the first transaction to acquire an *intention exclusive* (IX) lock on a table prevents other transactions from acquiring any S or X locks on the table. Conversely, the first transaction to acquire an *intention shared* (IS) lock on a table prevents other transactions from acquiring any X locks on the table. The two-phase process allows the lock requests to be resolved in order, without blocking locks and corresponding operations that are compatible. For more information about this locking mechanism, see Section 15.5.1, “InnoDB Locking”.
See Also lock, lock mode, locking, transaction.

intention shared lock
See intention lock.

inverted index
A data structure optimized for document retrieval systems, used in the implementation of `InnoDB` **full-text search**. The `InnoDB` **FULLTEXT index**, implemented as an inverted index, records the position of each word within a document, rather than the location of a table row. A single column value (a document stored as a text string) is represented by many entries in the inverted index.
See Also full-text search, FULLTEXT index, ilist.

IOPS
Acronym for **I/O operations per second**. A common measurement for busy systems, particularly **OLTP** applications. If this value is near the maximum that the storage devices can handle, the application can become **disk-bound**, limiting **scalability**.
See Also disk-bound, OLTP, scalability.

isolation level
One of the foundations of database processing. Isolation is the **I** in the acronym **ACID**; the isolation level is the setting that fine-tunes the balance between performance and reliability, consistency, and reproducibility of results when multiple **transactions** are making changes and performing queries at the same time.

From highest amount of consistency and protection to the least, the isolation levels supported by InnoDB are: **SERIALIZABLE**, **REPEATABLE READ**, **READ COMMITTED**, and **READ UNCOMMITTED**.

With `InnoDB` tables, many users can keep the default isolation level (*REPEATABLE READ*) for all operations. Expert users might choose the **READ COMMITTED** level as they push the boundaries of scalability with **OLTP** processing, or during data warehousing operations where minor inconsistencies do not affect the aggregate results of large amounts of data. The levels on the edges (**SERIALIZABLE** and **READ UNCOMMITTED**) change the processing behavior to such an extent that they are rarely used.

See Also ACID, OLTP, READ COMMITTED, READ UNCOMMITTED, REPEATABLE READ, SERIALIZABLE, transaction.

J

join
A **query** that retrieves data from more than one table, by referencing columns in the tables that hold identical values. Ideally, these columns are part of an `InnoDB` **foreign key** relationship, which ensures **referential integrity** and that the join columns are **indexed**. Often used to save space and improve query performance by replacing repeated strings with numeric IDs, in a **normalized** data design.
See Also foreign key, index, normalized, query, referential integrity.

K

KEY_BLOCK_SIZE
An option to specify the size of data pages within an `InnoDB` table that uses **compressed row format**. The default is 8 kilobytes. Lower values risk hitting internal limits that depend on the combination of row size and compression percentage.

For `MyISAM` tables, `KEY_BLOCK_SIZE` optionally specifies the size in bytes to use for index key blocks. The value is treated as a hint; a different size could be used if necessary. A `KEY_BLOCK_SIZE` value specified for an individual index definition overrides a table-level `KEY_BLOCK_SIZE` value.
See Also compressed row format.

L

latch
A lightweight structure used by `InnoDB` to implement a **lock** for its own internal memory structures, typically held for a brief time measured in milliseconds or microseconds. A general term that includes both **mutexes** (for exclusive access) and **rw-locks** (for shared access). Certain latches are the focus of `InnoDB` performance tuning. Statistics about latch use and contention are available through the **Performance Schema** interface.
See Also lock, locking, mutex, Performance Schema, rw-lock.

list
The `InnoDB` **buffer pool** is represented as a list of memory **pages**. The list is reordered as new pages are accessed and enter the buffer pool, as pages within the buffer pool are accessed again and are considered newer, and as pages that are not accessed for a long time are **evicted** from the buffer pool. The buffer pool is divided into **sublists**, and the replacement policy is a variation of the familiar **LRU** technique.
See Also buffer pool, eviction, LRU, page, sublist.

lock
The high-level notion of an object that controls access to a resource, such as a table, row, or internal data structure, as part of a **locking** strategy. For intensive performance tuning, you might delve into the actual structures that implement locks, such as **mutexes** and **latches**.
See Also latch, lock mode, locking, mutex.

lock escalation
An operation used in some database systems that converts many **row locks** into a single **table lock**, saving memory space but reducing concurrent access to the table. `InnoDB` uses a space-efficient representation for row locks, so that **lock** escalation is not needed.
See Also locking, row lock, table lock.

lock mode
A shared (S) **lock** allows a **transaction** to read a row. Multiple transactions can acquire an S lock on that same row at the same time.

An exclusive (X) lock allows a transaction to update or delete a row. No other transaction can acquire any kind of lock on that same row at the same time.

Intention locks apply to the table, and are used to indicate what kind of lock the transaction intends to acquire on rows in the table. Different transactions can acquire different kinds of intention locks on the same table, but the first transaction to acquire an intention exclusive (IX) lock on a table prevents other transactions from acquiring any S or X locks on the table. Conversely, the first transaction to acquire an intention shared (IS) lock on a table prevents other transactions from acquiring any X locks on the table. The two-phase process allows the lock requests to be resolved in order, without blocking locks and corresponding operations that are compatible.
See Also intention lock, lock, locking, transaction.

locking
The system of protecting a **transaction** from seeing or changing data that is being queried or changed by other transactions. The **locking** strategy must balance reliability and consistency of database operations (the principles of the **ACID** philosophy) against the performance needed for good **concurrency**. Fine-tuning the locking strategy often involves choosing an **isolation level** and ensuring all your database operations are safe and reliable for that isolation level.
See Also ACID, concurrency, isolation level, locking, transaction.

locking read
A `SELECT` statement that also performs a **locking** operation on an `InnoDB` table. Either `SELECT ... FOR UPDATE` or `SELECT ... LOCK IN SHARE MODE`. It has the potential to produce a **deadlock**, depending on the **isolation level** of the transaction. The opposite of a **non-locking read**. Not allowed for global tables in a **read-only transaction**.

`SELECT ... FOR SHARE` replaces `SELECT ... LOCK IN SHARE MODE` in MySQL 8.0.1, but `LOCK IN SHARE MODE` remains available for backward compatibility.

See Section 15.5.2.4, “Locking Reads”.
See Also deadlock, isolation level, locking, non-locking read, read-only transaction.

log
In the `InnoDB` context, “log” or “log files” typically refers to the **redo log** represented by the **ib_logfile*N*** files. Another type of `InnoDB` log is the **undo log**, which is a storage area that holds copies of data modified by active transactions.

Other kinds of logs that are important in MySQL are the **error log** (for diagnosing startup and runtime problems), **binary log** (for working with replication and performing point-in-time restores), the **general query log** (for diagnosing application problems), and the **slow query log** (for diagnosing performance problems).
See Also binary log, error log, general query log, ib_logfile, redo log, slow query log, undo log.

log buffer
The memory area that holds data to be written to the **log files** that make up the **redo log**. It is controlled by the `innodb_log_buffer_size` configuration option.
See Also log file, redo log.

log file
One of the **ib_logfile*N*** files that make up the **redo log**. Data is written to these files from the **log buffer** memory area.
See Also ib_logfile, log buffer, redo log.

log group
The set of files that make up the **redo log**, typically named `ib_logfile0` and `ib_logfile1`. (For that reason, sometimes referred to collectively as **ib_logfile**.)
See Also ib_logfile, redo log.

logical
A type of operation that involves high-level, abstract aspects such as tables, queries, indexes, and other SQL concepts. Typically, logical aspects are important to make database administration and application development convenient and usable. Contrast with **physical**.
See Also logical backup, physical.

logical backup
A **backup** that reproduces table structure and data, without copying the actual data files. For example, the `mysqldump` command produces a logical backup, because its output contains statements such as `CREATE TABLE` and `INSERT` that can re-create the data. Contrast with **physical backup**. A logical backup offers flexibility (for example, you could edit table definitions or insert statements before restoring), but can take substantially longer to **restore** than a physical backup.
See Also backup, mysqldump, physical backup, restore.

loose_
A prefix added to `InnoDB` configuration options after server **startup**, so any new configuration options not recognized by the current level of MySQL do not cause a startup failure. MySQL processes configuration options that start with this prefix, but gives a warning rather than a failure if the part after the prefix is not a recognized option.
See Also startup.

low-water mark
A value representing a lower limit, typically a threshold value at which some corrective action begins or becomes more aggressive. Contrast with **high-water mark**.
See Also high-water mark.

LRU
An acronym for “least recently used”, a common method for managing storage areas. The items that have not been used recently are **evicted** when space is needed to cache newer items. `InnoDB` uses the LRU mechanism by default to manage the **pages** within the **buffer pool**, but makes exceptions in cases where a page might be read only a single time, such as during a **full table scan**. This variation of the LRU algorithm is called the **midpoint insertion strategy**. For more information, see Section 15.6.3.1, “The InnoDB Buffer Pool”.
See Also buffer pool, eviction, full table scan, midpoint insertion strategy, page.

LSN
Acronym for “log sequence number”. This arbitrary, ever-increasing value represents a point in time corresponding to operations recorded in the **redo log**. (This point in time is regardless of **transaction** boundaries; it can fall in the middle of one or more transactions.) It is used internally by `InnoDB` during **crash recovery** and for managing the **buffer pool**.

Prior to MySQL 5.6.3, the LSN was a 4-byte unsigned integer. The LSN became an 8-byte unsigned integer in MySQL 5.6.3 when the redo log file size limit increased from 4GB to 512GB, as additional bytes were required to store extra size information. Applications built on MySQL 5.6.3 or later that use LSN values should use 64-bit rather than 32-bit variables to store and compare LSN values.

In the **MySQL Enterprise Backup** product, you can specify an LSN to represent the point in time from which to take an **incremental backup**. The relevant LSN is displayed by the output of the `mysqlbackup` command. Once you have the LSN corresponding to the time of a full backup, you can specify that value to take a subsequent incremental backup, whose output contains another LSN for the next incremental backup.
See Also buffer pool, crash recovery, incremental backup, MySQL Enterprise Backup, redo log, transaction.

M

.MRG file
A file containing references to other tables, used by the `MERGE` storage engine. Files with this extension are always included in backups produced by the `mysqlbackup` command of the **MySQL Enterprise Backup** product.
See Also MySQL Enterprise Backup, mysqlbackup command.

.MYD file
A file that MySQL uses to store data for a `MyISAM` table.
See Also .MYI file, MySQL Enterprise Backup, mysqlbackup command.

.MYI file
A file that MySQL uses to store indexes for a `MyISAM` table.

See Also .MYD file, MySQL Enterprise Backup, mysqlbackup command.

master server
: Frequently shortened to “master”. A database server machine in a **replication** scenario that processes the initial insert, update, and delete requests for data. These changes are propagated to, and repeated on, other servers known as **slave servers**.
See Also replication, slave server.

master thread
: An `InnoDB` **thread** that performs various tasks in the background. Most of these tasks are I/O related, such as writing changes from the **change buffer** to the appropriate secondary indexes.

To improve **concurrency**, sometimes actions are moved from the master thread to separate background threads. For example, in MySQL 5.6 and higher, **dirty pages** are **flushed** from the **buffer pool** by the **page cleaner** thread rather than the master thread.
See Also buffer pool, change buffer, concurrency, dirty page, flush, page cleaner, thread.

MDL
: Acronym for “metadata lock”.
See Also metadata lock.

memcached
: A popular component of many MySQL and **NoSQL** software stacks, allowing fast reads and writes for single values and caching the results entirely in memory. Traditionally, applications required extra logic to write the same data to a MySQL database for permanent storage, or to read data from a MySQL database when it was not cached yet in memory. Now, applications can use the simple `memcached` protocol, supported by client libraries for many languages, to communicate directly with MySQL servers using `InnoDB` or `NDB` tables. These NoSQL interfaces to MySQL tables allow applications to achieve higher read and write performance than by issuing SQL statements directly, and can simplify application logic and deployment configurations for systems that already incorporate `memcached` for in-memory caching.

The `memcached` interface to `InnoDB` tables is available in MySQL 5.6 and higher; see Section 15.19, “InnoDB memcached Plugin” for details. The `memcached` interface to `NDB` tables is available in NDB Cluster 7.2 and later; see http://dev.mysql.com/doc/ndbapi/en/ndbmemcache.html for details.
See Also InnoDB, NoSQL.

merge
: To apply changes to data cached in memory, such as when a page is brought into the **buffer pool**, and any applicable changes recorded in the **change buffer** are incorporated into the page in the buffer pool. The updated data is eventually written to the **tablespace** by the **flush** mechanism.
See Also buffer pool, change buffer, flush, tablespace.

metadata lock
: A type of **lock** that prevents **DDL** operations on a table that is being used at the same time by another **transaction**. For details, see Section 8.11.4, “Metadata Locking”.

Enhancements to **online** operations, particularly in MySQL 5.6 and higher, are focused on reducing the amount of metadata locking. The objective is for DDL operations that do not change the table structure (such as `CREATE INDEX` and `DROP INDEX` for `InnoDB` tables) to proceed while the table is being queried, updated, and so on by other transactions.
See Also DDL, lock, online, transaction.

metrics counter
: A feature implemented by the `INNODB_METRICS` table in the **INFORMATION_SCEMA**, in MySQL 5.6 and higher. You can query **counts** and totals for low-level `InnoDB` operations, and use the results for performance tuning in combination with data from the **Performance Schema**.
See Also counter, INFORMATION_SCHEMA, Performance Schema.

midpoint insertion strategy
: The technique of initially bringing **pages** into the `InnoDB` **buffer pool** not at the “newest” end of the list, but instead somewhere in the middle. The exact location of this point can vary, based on the setting of the

`innodb_old_blocks_pct` option. The intent is that pages that are only read once, such as during a **full table scan**, can be aged out of the buffer pool sooner than with a strict **LRU** algorithm. For more information, see Section 15.6.3.1, "The InnoDB Buffer Pool".
See Also buffer pool, full table scan, LRU, page.

mini-transaction
An internal phase of `InnoDB` processing, when making changes at the **physical** level to internal data structures during **DML** operations. A mini-transaction (mtr) has no notion of **rollback**; multiple mini-transactions can occur within a single **transaction**. Mini-transactions write information to the **redo log** that is used during **crash recovery**. A mini-transaction can also happen outside the context of a regular transaction, for example during **purge** processing by background threads.
See Also commit, crash recovery, DML, physical, purge, redo log, rollback, transaction.

mixed-mode insert
An `INSERT` statement where **auto-increment** values are specified for some but not all of the new rows. For example, a multi-value `INSERT` could specify a value for the auto-increment column in some cases and `NULL` in other cases. `InnoDB` generates auto-increment values for the rows where the column value was specified as `NULL`. Another example is an `INSERT ... ON DUPLICATE KEY UPDATE` statement, where auto-increment values might be generated but not used, for any duplicate rows that are processed as `UPDATE` rather than `INSERT` statements.

Can cause consistency issues between **master** and **slave** servers in a **replication** configuration. Can require adjusting the value of the **innodb_autoinc_lock_mode** configuration option.
See Also auto-increment, innodb_autoinc_lock_mode, master server, replication, slave server.

mtr
See mini-transaction.

multi-core
A type of processor that can take advantage of multithreaded programs, such as the MySQL server.

multiversion concurrency control
See MVCC.

mutex
Informal abbreviation for "mutex variable". (Mutex itself is short for "mutual exclusion".) The low-level object that `InnoDB` uses to represent and enforce exclusive-access **locks** to internal in-memory data structures. Once the lock is acquired, any other process, thread, and so on is prevented from acquiring the same lock. Contrast with **rw-locks**, which `InnoDB` uses to represent and enforce shared-access **locks** to internal in-memory data structures. Mutexes and rw-locks are known collectively as **latches**.
See Also latch, lock, Performance Schema, Pthreads, rw-lock.

MVCC
Acronym for "multiversion concurrency control". This technique lets `InnoDB` **transactions** with certain **isolation levels** perform **consistent read** operations; that is, to query rows that are being updated by other transactions, and see the values from before those updates occurred. This is a powerful technique to increase **concurrency**, by allowing queries to proceed without waiting due to **locks** held by the other transactions.

This technique is not universal in the database world. Some other database products, and some other MySQL storage engines, do not support it.
See Also ACID, concurrency, consistent read, isolation level, lock, transaction.

my.cnf
The name, on Unix or Linux systems, of the MySQL **option file**.
See Also my.ini, option file.

my.ini
The name, on Windows systems, of the MySQL **option file**.
See Also my.cnf, option file.

mysql
: The `mysql` program is the command-line interpreter for the MySQL database. It processes **SQL** statements, and also MySQL-specific commands such as `SHOW TABLES`, by passing requests to the `mysqld` daemon.
See Also mysqld, SQL.

MySQL Enterprise Backup
: A licensed product that performs **hot backups** of MySQL databases. It offers the most efficiency and flexibility when backing up `InnoDB` tables, but can also back up `MyISAM` and other kinds of tables.
See Also hot backup, InnoDB.

mysqlbackup command
: A command-line tool of the **MySQL Enterprise Backup** product. It performs a **hot backup** operation for `InnoDB` tables, and a warm backup for `MyISAM` and other kinds of tables. See Section 29.2, "MySQL Enterprise Backup Overview" for more information about this command.
See Also hot backup, MySQL Enterprise Backup, warm backup.

mysqld
: The `mysqld` program is the database engine for the MySQL database. It runs as a Unix daemon or Windows service, constantly waiting for requests and performing maintenance work in the background.
See Also mysql.

mysqldump
: A command that performs a **logical backup** of some combination of databases, tables, and table data. The results are SQL statements that reproduce the original schema objects, data, or both. For substantial amounts of data, a **physical backup** solution such as **MySQL Enterprise Backup** is faster, particularly for the **restore** operation.
See Also logical backup, MySQL Enterprise Backup, physical backup, restore.

N

natural key
: An indexed column, typically a **primary key**, where the values have some real-world significance. Usually advised against because:

  - If the value should ever change, there is potentially a lot of index maintenance to re-sort the **clustered index** and update the copies of the primary key value that are repeated in each **secondary index**.
  - Even seemingly stable values can change in unpredictable ways that are difficult to represent correctly in the database. For example, one country can change into two or several, making the original country code obsolete. Or, rules about unique values might have exceptions. For example, even if taxpayer IDs are intended to be unique to a single person, a database might have to handle records that violate that rule, such as in cases of identity theft. Taxpayer IDs and other sensitive ID numbers also make poor primary keys, because they may need to be secured, encrypted, and otherwise treated differently than other columns.

  Thus, it is typically better to use arbitrary numeric values to form a **synthetic key**, for example using an **auto-increment** column.
  See Also auto-increment, clustered index, primary key, secondary index, synthetic key.

neighbor page
: Any **page** in the same **extent** as a particular page. When a page is selected to be **flushed**, any neighbor pages that are **dirty** are typically flushed as well, as an I/O optimization for traditional hard disks. In MySQL 5.6 and up, this behavior can be controlled by the configuration variable `innodb_flush_neighbors`; you might turn that setting off for SSD drives, which do not have the same overhead for writing smaller batches of data at random locations.
See Also dirty page, extent, flush, page.

next-key lock
: A combination of a **record lock** on the index record and a gap lock on the gap before the index record.

See Also gap lock, locking, record lock.

non-locking read
A **query** that does not use the `SELECT ... FOR UPDATE` or `SELECT ... LOCK IN SHARE MODE` clauses. The only kind of query allowed for global tables in a **read-only transaction**. The opposite of a **locking read**. See Section 15.5.2.3, “Consistent Nonlocking Reads”.

`SELECT ... FOR SHARE` replaces `SELECT ... LOCK IN SHARE MODE` in MySQL 8.0.1, but `LOCK IN SHARE MODE` remains available for backward compatibility.
See Also locking read, query, read-only transaction.

non-repeatable read
The situation when a query retrieves data, and a later query within the same **transaction** retrieves what should be the same data, but the queries return different results (changed by another transaction committing in the meantime).

This kind of operation goes against the **ACID** principle of database design. Within a transaction, data should be consistent, with predictable and stable relationships.

Among different **isolation levels**, non-repeatable reads are prevented by the **serializable read** and **repeatable read** levels, and allowed by the **consistent read**, and **read uncommitted** levels.
See Also ACID, consistent read, isolation level, READ UNCOMMITTED, REPEATABLE READ, SERIALIZABLE, transaction.

nonblocking I/O
An industry term that means the same as **asynchronous I/O**.
See Also asynchronous I/O.

normalized
A database design strategy where data is split into multiple tables, and duplicate values condensed into single rows represented by an ID, to avoid storing, querying, and updating redundant or lengthy values. It is typically used in **OLTP** applications.

For example, an address might be given a unique ID, so that a census database could represent the relationship **lives at this address** by associating that ID with each member of a family, rather than storing multiple copies of a complex value such as **123 Main Street, Anytown, USA**.

For another example, although a simple address book application might store each phone number in the same table as a person's name and address, a phone company database might give each phone number a special ID, and store the numbers and IDs in a separate table. This normalized representation could simplify large-scale updates when area codes split apart.

Normalization is not always recommended. Data that is primarily queried, and only updated by deleting entirely and reloading, is often kept in fewer, larger tables with redundant copies of duplicate values. This data representation is referred to as **denormalized**, and is frequently found in data warehousing applications.
See Also denormalized, foreign key, OLTP, relational.

NoSQL
A broad term for a set of data access technologies that do not use the **SQL** language as their primary mechanism for reading and writing data. Some NoSQL technologies act as key-value stores, only accepting single-value reads and writes; some relax the restrictions of the **ACID** methodology; still others do not require a pre-planned **schema**. MySQL users can combine NoSQL-style processing for speed and simplicity with SQL operations for flexibility and convenience, by using the **memcached** API to directly access some kinds of MySQL tables. The `memcached` interface to `InnoDB` tables is available in MySQL 5.6 and higher; see Section 15.19, “InnoDB memcached Plugin” for details. The `memcached` interface to `NDB` tables is available in NDB Cluster 7.2 and later; see ndbmemcache—Memcache API for NDB Cluster.
See Also ACID, InnoDB, memcached, schema, SQL.

NOT NULL constraint
A type of **constraint** that specifies that a **column** cannot contain any **NULL** values. It helps to preserve **referential integrity**, as the database server can identify data with erroneous missing values. It also helps

in the arithmetic involved in query optimization, allowing the optimizer to predict the number of entries in an index on that column.
See Also column, constraint, NULL, primary key, referential integrity.

NULL
A special value in **SQL**, indicating the absence of data. Any arithmetic operation or equality test involving a `NULL` value, in turn produces a `NULL` result. (Thus it is similar to the IEEE floating-point concept of NaN, "not a number".) Any aggregate calculation such as `AVG()` ignores rows with `NULL` values, when determining how many rows to divide by. The only test that works with `NULL` values uses the SQL idioms `IS NULL` or `IS NOT NULL`.

`NULL` values play a part in **index** operations, because for performance a database must minimize the overhead of keeping track of missing data values. Typically, `NULL` values are not stored in an index, because a query that tests an indexed column using a standard comparison operator could never match a row with a `NULL` value for that column. For the same reason, unique indexes do not prevent `NULL` values; those values simply are not represented in the index. Declaring a `NOT NULL` constraint on a column provides reassurance that there are no rows left out of the index, allowing for better query optimization (accurate counting of rows and estimation of whether to use the index).

Because the **primary key** must be able to uniquely identify every row in the table, a single-column primary key cannot contain any `NULL` values, and a multi-column primary key cannot contain any rows with `NULL` values in all columns.

Although the Oracle database allows a `NULL` value to be concatenated with a string, `InnoDB` treats the result of such an operation as `NULL`.
See Also index, primary key, SQL.

O

.OPT file
A file containing database configuration information. Files with this extension are included in backups produced by the `mysqlbackup` command of the **MySQL Enterprise Backup** product.
See Also MySQL Enterprise Backup, mysqlbackup command.

off-page column
A column containing variable-length data (such as `BLOB` and `VARCHAR`) that is too long to fit on a **B-tree** page. The data is stored in **overflow pages**. The **DYNAMIC** row format is more efficient for such storage than the older **COMPACT** row format.
See Also B-tree, compact row format, dynamic row format, overflow page.

OLTP
Acronym for "Online Transaction Processing". A database system, or a database application, that runs a workload with many **transactions**, with frequent writes as well as reads, typically affecting small amounts of data at a time. For example, an airline reservation system or an application that processes bank deposits. The data might be organized in **normalized** form for a balance between **DML** (insert/update/delete) efficiency and **query** efficiency. Contrast with **data warehouse**.

With its **row-level locking** and **transactional** capability, **InnoDB** is the ideal storage engine for MySQL tables used in OLTP applications.
See Also data warehouse, DML, InnoDB, query, row lock, transaction.

online
A type of operation that involves no downtime, blocking, or restricted operation for the database. Typically applied to **DDL**. Operations that shorten the periods of restricted operation, such as **fast index creation**, have evolved into a wider set of **online DDL** operations in MySQL 5.6.

In the context of backups, a **hot backup** is an online operation and a **warm backup** is partially an online operation.

See Also DDL, Fast Index Creation, hot backup, online DDL, warm backup.

online DDL
A feature that improves the performance, concurrency, and availability of `InnoDB` tables during **DDL** (primarily `ALTER TABLE`) operations. See Section 15.12, "InnoDB and Online DDL" for details.

The details vary according to the type of operation. In some cases, the table can be modified concurrently while the `ALTER TABLE` is in progress. The operation might be able to be performed without a table copy, or using a specially optimized type of table copy. Space usage is controlled by the `innodb_online_alter_log_max_size` configuration option.

This feature is an enhancement of the **Fast Index Creation** feature in MySQL 5.5.
See Also DDL, Fast Index Creation, online.

optimistic
A methodology that guides low-level implementation decisions for a relational database system. The requirements of performance and **concurrency** in a relational database mean that operations must be started or dispatched quickly. The requirements of consistency and **referential integrity** mean that any operation could fail: a transaction might be rolled back, a **DML** operation could violate a constraint, a request for a lock could cause a deadlock, a network error could cause a timeout. An optimistic strategy is one that assumes most requests or attempts will succeed, so that relatively little work is done to prepare for the failure case. When this assumption is true, the database does little unnecessary work; when requests do fail, extra work must be done to clean up and undo changes.

`InnoDB` uses optimistic strategies for operations such as **locking** and **commits**. For example, data changed by a transaction can be written to the data files before the commit occurs, making the commit itself very fast, but requiring more work to undo the changes if the transaction is rolled back.

The opposite of an optimistic strategy is a **pessimistic** one, where a system is optimized to deal with operations that are unreliable and frequently unsuccessful. This methodology is rare in a database system, because so much care goes into choosing reliable hardware, networks, and algorithms.
See Also commit, concurrency, DML, locking, pessimistic, referential integrity.

optimizer
The MySQL component that determines the best **indexes** and **join** order to use for a **query**, based on characteristics and data distribution of the relevant **tables**.
See Also index, join, query, table.

option
A configuration parameter for MySQL, either stored in the **option file** or passed on the command line.

For the **options** that apply to **InnoDB** tables, each option name starts with the prefix `innodb_`.
See Also InnoDB, option, option file.

option file
The file that holds the configuration **options** for the MySQL instance. Traditionally, on Linux and Unix this file is named `my.cnf`, and on Windows it is named `my.ini`.
See Also configuration file, my.cnf, my.ini, option.

overflow page
Separately allocated disk **pages** that hold variable-length columns (such as `BLOB` and `VARCHAR`) that are too long to fit on a **B-tree** page. The associated columns are known as **off-page columns**.
See Also B-tree, off-page column, page.

P

.par file
A file containing partition definitions. Files with this extension are included in backups produced by the `mysqlbackup` command of the **MySQL Enterprise Backup** product.

With the introduction of native partitioning support for `InnoDB` tables in MySQL 5.7.6, `.par` files are no longer created for partitioned `InnoDB` tables. Partitioned `MyISAM` tables continue to use `.par` files in MySQL 5.7. In MySQL 8.0, partitioning support is only provided by the `InnoDB` storage engine. As such, `.par` files are no longer used as of MySQL 8.0.
See Also MySQL Enterprise Backup, mysqlbackup command.

page
A unit representing how much data `InnoDB` transfers at any one time between disk (the **data files**) and memory (the **buffer pool**). A page can contain one or more **rows**, depending on how much data is in each row. If a row does not fit entirely into a single page, `InnoDB` sets up additional pointer-style data structures so that the information about the row can be stored in one page.

One way to fit more data in each page is to use **compressed row format**. For tables that use BLOBs or large text fields, **compact row format** allows those large columns to be stored separately from the rest of the row, reducing I/O overhead and memory usage for queries that do not reference those columns.

When `InnoDB` reads or writes sets of pages as a batch to increase I/O throughput, it reads or writes an **extent** at a time.

All the `InnoDB` disk data structures within a MySQL instance share the same **page size**.
See Also buffer pool, compact row format, compressed row format, data files, extent, page size, row.

page cleaner
An `InnoDB` background **thread** that **flushes dirty pages** from the **buffer pool**. Prior to MySQL 5.6, this activity was performed by the **master thread**. The number of page cleaner threads is controlled by the `innodb_page_cleaners` configuration option, introduced in MySQL 5.7.4.
See Also buffer pool, dirty page, flush, master thread, thread.

page size
For releases up to and including MySQL 5.5, the size of each `InnoDB` **page** is fixed at 16 kilobytes. This value represents a balance: large enough to hold the data for most rows, yet small enough to minimize the performance overhead of transferring unneeded data to memory. Other values are not tested or supported.

Starting in MySQL 5.6, the page size for an `InnoDB` **instance** can be either 4KB, 8KB, or 16KB, controlled by the `innodb_page_size` configuration option. As of MySQL 5.7.6, `InnoDB` also supports 32KB and 64KB page sizes. For 32KB and 64KB page sizes, `ROW_FORMAT=COMPRESSED` is not supported and the maximum record size is 16KB.

Page size is set when creating the MySQL instance, and it remains constant afterward. The same page size applies to all `InnoDB` **tablespaces**, including the **system tablespace**, **file-per-table** tablespaces, and **general tablespaces**.

Smaller page sizes can help performance with storage devices that use small block sizes, particularly for **SSD** devices in **disk-bound** workloads, such as for **OLTP** applications. As individual rows are updated, less data is copied into memory, written to disk, reorganized, locked, and so on.
See Also disk-bound, file-per-table, general tablespace, instance, OLTP, page, SSD, system tablespace, tablespace.

parent table
The table in a **foreign key** relationship that holds the initial column values pointed to from the **child table**. The consequences of deleting, or updating rows in the parent table depend on the `ON UPDATE` and `ON DELETE` clauses in the foreign key definition. Rows with corresponding values in the child table could be automatically deleted or updated in turn, or those columns could be set to `NULL`, or the operation could be prevented.
See Also child table, foreign key.

partial backup
A **backup** that contains some of the **tables** in a MySQL database, or some of the databases in a MySQL instance. Contrast with **full backup**.
See Also backup, full backup, table.

partial index
An **index** that represents only part of a column value, typically the first N characters (the **prefix**) of a long `VARCHAR` value.
See Also index, index prefix.

Performance Schema
The `performance_schema` schema, in MySQL 5.5 and up, presents a set of tables that you can query to get detailed information about the performance characteristics of many internal parts of the MySQL server.
See Chapter 25, *MySQL Performance Schema*.
See Also INFORMATION_SCHEMA, latch, mutex, rw-lock.

persistent statistics
A feature in MySQL 5.6 that stores **index** statistics for `InnoDB` **tables** on disk, providing better **plan stability** for **queries**. For more information, see Section 15.6.11.1, "Configuring Persistent Optimizer Statistics Parameters".
See Also index, optimizer, plan stability, query, table.

pessimistic
A methodology that sacrifices performance or concurrency in favor of safety. It is appropriate if a high proportion of requests or attempts might fail, or if the consequences of a failed request are severe. `InnoDB` uses what is known as a pessimistic **locking** strategy, to minimize the chance of **deadlocks**. At the application level, you might avoid deadlocks by using a pessimistic strategy of acquiring all locks needed by a transaction at the very beginning.

Many built-in database mechanisms use the opposite **optimistic** methodology.
See Also deadlock, locking, optimistic.

phantom
A row that appears in the result set of a query, but not in the result set of an earlier query. For example, if a query is run twice within a **transaction**, and in the meantime, another transaction commits after inserting a new row or updating a row so that it matches the `WHERE` clause of the query.

This occurrence is known as a phantom read. It is harder to guard against than a **non-repeatable read**, because locking all the rows from the first query result set does not prevent the changes that cause the phantom to appear.

Among different **isolation levels**, phantom reads are prevented by the **serializable read** level, and allowed by the **repeatable read**, **consistent read**, and **read uncommitted** levels.
See Also consistent read, isolation level, non-repeatable read, READ UNCOMMITTED, REPEATABLE READ, SERIALIZABLE, transaction.

physical
A type of operation that involves hardware-related aspects such as disk blocks, memory pages, files, bits, disk reads, and so on. Typically, physical aspects are important during expert-level performance tuning and problem diagnosis. Contrast with **logical**.
See Also logical, physical backup.

physical backup
A **backup** that copies the actual data files. For example, the **`mysqlbackup`** command of the **MySQL Enterprise Backup** product produces a physical backup, because its output contains data files that can be used directly by the `mysqld` server, resulting in a faster **restore** operation. Contrast with **logical backup**.
See Also backup, logical backup, MySQL Enterprise Backup, restore.

PITR
Acronym for **point-in-time recovery**.
See Also point-in-time recovery.

plan stability
A property of a **query execution plan**, where the optimizer makes the same choices each time for a given **query**, so that performance is consistent and predictable.

See Also query, query execution plan.

point-in-time recovery
The process of restoring a **backup** to recreate the state of the database at a specific date and time. Commonly abbreviated “PITR”. Because it is unlikely that the specified time corresponds exactly to the time of a backup, this technique usually requires a combination of a **physical backup** and a **logical backup**. For example, with the **MySQL Enterprise Backup** product, you restore the last backup that you took before the specified point in time, then replay changes from the **binary log** between the time of the backup and the PITR time.
See Also backup, binary log, logical backup, MySQL Enterprise Backup, physical backup.

prefix
See index prefix.

prepared backup
A set of backup files, produced by the **MySQL Enterprise Backup** product, after all the stages of applying **binary logs** and **incremental backups** are finished. The resulting files are ready to be **restored**. Prior to the apply steps, the files are known as a **raw backup**.
See Also binary log, hot backup, incremental backup, MySQL Enterprise Backup, raw backup, restore.

primary key
A set of columns—and by implication, the index based on this set of columns—that can uniquely identify every row in a table. As such, it must be a unique index that does not contain any `NULL` values.

`InnoDB` requires that every table has such an index (also called the **clustered index** or **cluster index**), and organizes the table storage based on the column values of the primary key.

When choosing primary key values, consider using arbitrary values (a **synthetic key**) rather than relying on values derived from some other source (a **natural key**).
See Also clustered index, index, natural key, synthetic key.

process
An instance of an executing program. The operating system switches between multiple running processes, allowing for a certain degree of **concurrency**. On most operating systems, processes can contain multiple **threads** of execution that share resources. Context-switching between threads is faster than the equivalent switching between processes.
See Also concurrency, thread.

pseudo-record
An artificial record in an index, used for **locking** key values or ranges that do not currently exist.
See Also infimum record, locking, supremum record.

Pthreads
The POSIX threads standard, which defines an API for threading and locking operations on Unix and Linux systems. On Unix and Linux systems, `InnoDB` uses this implementation for **mutexes**.
See Also mutex.

purge
A type of garbage collection performed by one or more separate background threads (controlled by `innodb_purge_threads`) that runs on a periodic schedule. Purge parses and processes **undo log** pages from the **history list** for the purpose of removing clustered and secondary index records that were marked for deletion (by previous `DELETE` statements) and are no longer required for **MVCC** or **rollback**. Purge frees undo log pages from the history list after processing them.
See Also history list, MVCC, rollback, undo log.

purge buffering
The technique of storing changes to secondary index pages, resulting from `DELETE` operations, in the **change buffer** rather than writing the changes immediately, so that the physical writes can be performed to minimize random I/O. (Because delete operations are a two-step process, this operation buffers the write that

normally purges an index record that was previously marked for deletion.) It is one of the types of **change buffering**; the others are **insert buffering** and **delete buffering**.
See Also change buffer, change buffering, delete buffering, insert buffer, insert buffering.

purge lag
Another name for the `InnoDB` **history list**. Related to the `innodb_max_purge_lag` configuration option.
See Also history list, purge.

purge thread
A **thread** within the `InnoDB` process that is dedicated to performing the periodic **purge** operation. In MySQL 5.6 and higher, multiple purge threads are enabled by the `innodb_purge_threads` configuration option.
See Also purge, thread.

Q

query
In **SQL**, an operation that reads information from one or more **tables**. Depending on the organization of data and the parameters of the query, the lookup might be optimized by consulting an **index**. If multiple tables are involved, the query is known as a **join**.

For historical reasons, sometimes discussions of internal processing for statements use “query” in a broader sense, including other types of MySQL statements such as **DDL** and **DML** statements.
See Also DDL, DML, index, join, SQL, table.

query execution plan
The set of decisions made by the optimizer about how to perform a **query** most efficiently, including which **index** or indexes to use, and the order in which to **join** tables. **Plan stability** involves the same choices being made consistently for a given query.
See Also index, join, plan stability, query.

query log
See general query log.

quiesce
To reduce the amount of database activity, often in preparation for an operation such as an `ALTER TABLE`, a **backup**, or a **shutdown**. Might or might not involve doing as much **flushing** as possible, so that **InnoDB** does not continue doing background I/O.

In MySQL 5.6 and higher, the syntax `FLUSH TABLES ... FOR EXPORT` writes some data to disk for `InnoDB` tables that make it simpler to back up those tables by copying the data files.
See Also backup, flush, InnoDB, shutdown.

R

R-tree
A tree data structure used for spatial indexing of multi-dimensional data such as geographical coordinates, rectangles or polygons.
See Also B-tree.

RAID
Acronym for “Redundant Array of Inexpensive Drives”. Spreading I/O operations across multiple drives enables greater **concurrency** at the hardware level, and improves the efficiency of low-level write operations that otherwise would be performed in sequence.
See Also concurrency.

random dive
A technique for quickly estimating the number of different values in a column (the column's **cardinality**). `InnoDB` samples pages at random from the index and uses that data to estimate the number of different values.

See Also cardinality.

raw backup
The initial set of backup files produced by the **MySQL Enterprise Backup** product, before the changes reflected in the **binary log** and any **incremental backups** are applied. At this stage, the files are not ready to **restore**. After these changes are applied, the files are known as a **prepared backup**.
See Also binary log, hot backup, ibbackup_logfile, incremental backup, MySQL Enterprise Backup, prepared backup, restore.

READ COMMITTED
An **isolation level** that uses a **locking** strategy that relaxes some of the protection between **transactions**, in the interest of performance. Transactions cannot see uncommitted data from other transactions, but they can see data that is committed by another transaction after the current transaction started. Thus, a transaction never sees any bad data, but the data that it does see may depend to some extent on the timing of other transactions.

When a transaction with this isolation level performs `UPDATE ... WHERE` or `DELETE ... WHERE` operations, other transactions might have to wait. The transaction can perform `SELECT ... FOR UPDATE`, and `LOCK IN SHARE MODE` operations without making other transactions wait.

`SELECT ... FOR SHARE` replaces `SELECT ... LOCK IN SHARE MODE` in MySQL 8.0.1, but `LOCK IN SHARE MODE` remains available for backward compatibility.
See Also ACID, isolation level, locking, REPEATABLE READ, SERIALIZABLE, transaction.

read phenomena
Phenomena such as **dirty reads**, **non-repeatable reads**, and **phantom** reads which can occur when a transaction reads data that another transaction has modified.
See Also dirty read, non-repeatable read, phantom.

READ UNCOMMITTED
The **isolation level** that provides the least amount of protection between transactions. Queries employ a **locking** strategy that allows them to proceed in situations where they would normally wait for another transaction. However, this extra performance comes at the cost of less reliable results, including data that has been changed by other transactions and not committed yet (known as **dirty read**). Use this isolation level with great caution, and be aware that the results might not be consistent or reproducible, depending on what other transactions are doing at the same time. Typically, transactions with this isolation level only do queries, not insert, update, or delete operations.
See Also ACID, dirty read, isolation level, locking, transaction.

read view
An internal snapshot used by the **MVCC** mechanism of `InnoDB`. Certain **transactions**, depending on their **isolation level**, see the data values as they were at the time the transaction (or in some cases, the statement) started. Isolation levels that use a read view are **REPEATABLE READ**, **READ COMMITTED**, and **READ UNCOMMITTED**.
See Also isolation level, MVCC, READ COMMITTED, READ UNCOMMITTED, REPEATABLE READ, transaction.

read-ahead
A type of I/O request that prefetches a group of **pages** (an entire **extent**) into the **buffer pool** asynchronously, in anticipation that these pages will be needed soon. The linear read-ahead technique prefetches all the pages of one extent based on access patterns for pages in the preceding extent. The random read-ahead technique prefetches all the pages for an extent once a certain number of pages from the same extent are in the buffer pool. Random read-ahead is not part of MySQL 5.5, but is re-introduced in MySQL 5.6 under the control of the `innodb_random_read_ahead` configuration option.
See Also buffer pool, extent, page.

read-only transaction
A type of **transaction** that can be optimized for `InnoDB` tables by eliminating some of the bookkeeping involved with creating a **read view** for each transaction. Can only perform **non-locking read** queries. It can

be started explicitly with the syntax `START TRANSACTION READ ONLY`, or automatically under certain conditions. See Section 8.5.3, “Optimizing InnoDB Read-Only Transactions” for details.
See Also non-locking read, read view, transaction.

record lock
A lock on an index record. For example, `SELECT c1 FROM t WHERE c1 = 10 FOR UPDATE;` prevents any other transaction from inserting, updating, or deleting rows where the value of `t.c1` is 10. Contrast with **gap lock** and **next-key lock**.
See Also gap lock, lock, next-key lock.

redo
The data, in units of records, recorded in the **redo log** when DML statements make changes to `InnoDB` tables. It is used during **crash recovery** to correct data written by incomplete **transactions**. The ever-increasing **LSN** value represents the cumulative amount of redo data that has passed through the redo log.
See Also crash recovery, DML, LSN, redo log, transaction.

redo log
A disk-based data structure used during **crash recovery**, to correct data written by incomplete **transactions**. During normal operation, it encodes requests to change `InnoDB` table data, which result from SQL statements or low-level API calls through NoSQL interfaces. Modifications that did not finish updating the **data files** before an unexpected **shutdown** are replayed automatically.

The redo log is physically represented as a set of files, typically named `ib_logfile0` and `ib_logfile1`. The data in the redo log is encoded in terms of records affected; this data is collectively referred to as **redo**. The passage of data through the redo logs is represented by the ever-increasing **LSN** value. The original 4GB limit on maximum size for the redo log is raised to 512GB in MySQL 5.6.3.

The disk layout of the redo log is influenced by the configuration options `innodb_log_file_size`, `innodb_log_group_home_dir`, and (rarely) `innodb_log_files_in_group`. The performance of redo log operations is also affected by the **log buffer**, which is controlled by the `innodb_log_buffer_size` configuration option.
See Also crash recovery, data files, ib_logfile, log buffer, LSN, redo, shutdown, transaction.

redundant row format
The oldest `InnoDB` **row format**. Prior to MySQL 5.0.3, it was the only row format available in `InnoDB`. From MySQL 5.0.3 to MySQL 5.7.8, the default row format is **COMPACT**. As of MySQL 5.7.9, the default row format is defined by the `innodb_default_row_format` configuration option, which has a default setting of **DYNAMIC**. You can still specify the **REDUNDANT** row format for compatibility with older `InnoDB` tables.

For more information, see Section 15.10.4, “COMPACT and REDUNDANT Row Formats”.
See Also compact row format, dynamic row format, row format.

referential integrity
The technique of maintaining data always in a consistent format, part of the **ACID** philosophy. In particular, data in different tables is kept consistent through the use of **foreign key constraints**, which can prevent changes from happening or automatically propagate those changes to all related tables. Related mechanisms include the **unique constraint**, which prevents duplicate values from being inserted by mistake, and the **NOT NULL constraint**, which prevents blank values from being inserted by mistake.
See Also ACID, FOREIGN KEY constraint, NOT NULL constraint, unique constraint.

relational
An important aspect of modern database systems. The database server encodes and enforces relationships such as one-to-one, one-to-many, many-to-one, and uniqueness. For example, a person might have zero, one, or many phone numbers in an address database; a single phone number might be associated with several family members. In a financial database, a person might be required to have exactly one taxpayer ID, and any taxpayer ID could only be associated with one person.

The database server can use these relationships to prevent bad data from being inserted, and to find efficient ways to look up information. For example, if a value is declared to be unique, the server can stop searching as soon as the first match is found, and it can reject attempts to insert a second copy of the same value.

At the database level, these relationships are expressed through SQL features such as **columns** within a table, unique and `NOT NULL` **constraints**, **foreign keys**, and different kinds of join operations. Complex relationships typically involve data split between more than one table. Often, the data is **normalized**, so that duplicate values in one-to-many relationships are stored only once.

In a mathematical context, the relations within a database are derived from set theory. For example, the `OR` and `AND` operators of a `WHERE` clause represent the notions of union and intersection.
See Also ACID, column, constraint, foreign key, normalized.

relevance
In the **full-text search** feature, a number signifying the similarity between the search string and the data in the **FULLTEXT index**. For example, when you search for a single word, that word is typically more relevant for a row where it occurs several times in the text than a row where it appears only once.
See Also full-text search, FULLTEXT index.

REPEATABLE READ
The default **isolation level** for `InnoDB`. It prevents any rows that are queried from being changed by other **transactions**, thus blocking **non-repeatable reads** but not **phantom** reads. It uses a moderately strict **locking** strategy so that all queries within a transaction see data from the same snapshot, that is, the data as it was at the time the transaction started.

When a transaction with this isolation level performs `UPDATE ... WHERE`, `DELETE ... WHERE`, `SELECT ... FOR UPDATE`, and `LOCK IN SHARE MODE` operations, other transactions might have to wait.

`SELECT ... FOR SHARE` replaces `SELECT ... LOCK IN SHARE MODE` in MySQL 8.0.1, but `LOCK IN SHARE MODE` remains available for backward compatibility.
See Also ACID, consistent read, isolation level, locking, phantom, transaction.

repertoire
Repertoire is a term applied to character sets. A character set repertoire is the collection of characters in the set. See Section 10.2.1, “Character Set Repertoire”.

replication
The practice of sending changes from a **master database**, to one or more **slave databases**, so that all databases have the same data. This technique has a wide range of uses, such as load-balancing for better scalability, disaster recovery, and testing software upgrades and configuration changes. The changes can be sent between the database by methods called **row-based replication** and **statement-based replication**.
See Also master server, row-based replication, slave server, statement-based replication.

restore
The process of putting a set of backup files from the **MySQL Enterprise Backup** product in place for use by MySQL. This operation can be performed to fix a corrupted database, to return to some earlier point in time, or (in a **replication** context) to set up a new **slave database**. In the **MySQL Enterprise Backup** product, this operation is performed by the `copy-back` option of the `mysqlbackup` command.
See Also hot backup, MySQL Enterprise Backup, mysqlbackup command, prepared backup, replication, slave server.

rollback
A **SQL** statement that ends a **transaction**, undoing any changes made by the transaction. It is the opposite of **commit**, which makes permanent any changes made in the transaction.

By default, MySQL uses the **autocommit** setting, which automatically issues a commit following each SQL statement. You must change this setting before you can use the rollback technique.
See Also ACID, autocommit, commit, SQL, transaction.

rollback segment
The storage area containing the **undo log**. Rollback segments have traditionally resided in the **system tablespace**. As of MySQL 5.6, rollback segments can reside in **undo tablespaces**. As of MySQL 5.7, rollback segments are also allocated to the *temporary tablespace*.

See Also system tablespace, temporary tablespace, undo log, undo tablespace.

row
The logical data structure defined by a set of **columns**. A set of rows makes up a **table**. Within `InnoDB` **data files**, each **page** can contain one or more rows.

Although `InnoDB` uses the term **row format** for consistency with MySQL syntax, the row format is a property of each table and applies to all rows in that table.
See Also column, data files, page, row format, table.

row format
The disk storage format for **rows** of an `InnoDB` **table**. As `InnoDB` gains new capabilities such as **compression**, new row formats are introduced to support the resulting improvements in storage efficiency and performance.

The row format of an `InnoDB` table is specified by the `ROW_FORMAT` option or by the `innodb_default_row_format` configuration option (introduced in MySQL 5.7.9). Row formats include `REDUNDANT`, `COMPACT`, `COMPRESSED`, and `DYNAMIC`. To view the row format of an `InnoDB` table, issue the `SHOW TABLE STATUS` statement or query `InnoDB` table metadata in the `INFORMATION_SCHEMA`.
See Also compact row format, compressed row format, compression, dynamic row format, redundant row format, row, table.

row lock
A **lock** that prevents a row from being accessed in an incompatible way by another **transaction**. Other rows in the same table can be freely written to by other transactions. This is the type of **locking** done by **DML** operations on **InnoDB** tables.

Contrast with **table locks** used by `MyISAM`, or during **DDL** operations on `InnoDB` tables that cannot be done with **online DDL**; those locks block concurrent access to the table.
See Also DDL, DML, InnoDB, lock, locking, online DDL, table lock, transaction.

row-based replication
A form of **replication** where events are propagated from the **master server** specifying how to change individual rows on the **slave server**. It is safe to use for all settings of the `innodb_autoinc_lock_mode` option.
See Also auto-increment locking, innodb_autoinc_lock_mode, master server, replication, slave server, statement-based replication.

row-level locking
The **locking** mechanism used for **InnoDB** tables, relying on **row locks** rather than **table locks**. Multiple **transactions** can modify the same table concurrently. Only if two transactions try to modify the same row does one of the transactions wait for the other to complete (and release its row locks).
See Also InnoDB, locking, row lock, table lock, transaction.

rw-lock
The low-level object that `InnoDB` uses to represent and enforce shared-access **locks** to internal in-memory data structures following certain rules. Contrast with **mutexes**, which `InnoDB` uses to represent and enforce exclusive access to internal in-memory data structures. Mutexes and rw-locks are known collectively as **latches**.

`rw-lock` types include `s-locks` (shared locks), `x-locks` (exclusive locks), and `sx-locks` (shared-exclusive locks).

- An `s-lock` provides read access to a common resource.
- An `x-lock` provides write access to a common resource while not permitting inconsistent reads by other threads.
- An `sx-lock` provides write access to a common resource while permitting inconsistent reads by other threads. `sx-locks` were introduced in MySQL 5.7 to optimize concurrency and improve scalability for read-write workloads.

The following matrix summarizes rw-lock type compatibility.

	S	*SX*	*X*
S	Compatible	Compatible	Conflict
SX	Compatible	Conflict	Conflict
X	Conflict	Conflict	Conflict

See Also latch, lock, mutex, Performance Schema.

S

savepoint
: Savepoints help to implement nested **transactions**. They can be used to provide scope to operations on tables that are part of a larger transaction. For example, scheduling a trip in a reservation system might involve booking several different flights; if a desired flight is unavailable, you might **roll back** the changes involved in booking that one leg, without rolling back the earlier flights that were successfully booked.
See Also rollback, transaction.

scalability
: The ability to add more work and issue more simultaneous requests to a system, without a sudden drop in performance due to exceeding the limits of system capacity. Software architecture, hardware configuration, application coding, and type of workload all play a part in scalability. When the system reaches its maximum capacity, popular techniques for increasing scalability are **scale up** (increasing the capacity of existing hardware or software) and **scale out** (adding new servers and more instances of MySQL). Often paired with **availability** as critical aspects of a large-scale deployment.
See Also availability, scale out, scale up.

scale out
: A technique for increasing **scalability** by adding new servers and more instances of MySQL. For example, setting up replication, NDB Cluster, connection pooling, or other features that spread work across a group of servers. Contrast with **scale up**.
See Also scalability, scale up.

scale up
: A technique for increasing **scalability** by increasing the capacity of existing hardware or software. For example, increasing the memory on a server and adjusting memory-related parameters such as `innodb_buffer_pool_size` and `innodb_buffer_pool_instances`. Contrast with **scale out**.
See Also scalability, scale out.

schema
: Conceptually, a schema is a set of interrelated database objects, such as tables, table columns, data types of the columns, indexes, foreign keys, and so on. These objects are connected through SQL syntax, because the columns make up the tables, the foreign keys refer to tables and columns, and so on. Ideally, they are also connected logically, working together as part of a unified application or flexible framework. For example, the **INFORMATION_SCHEMA** and **performance_schema** databases use “schema” in their names to emphasize the close relationships between the tables and columns they contain.

  In MySQL, physically, a **schema** is synonymous with a **database**. You can substitute the keyword `SCHEMA` instead of `DATABASE` in MySQL SQL syntax, for example using `CREATE SCHEMA` instead of `CREATE DATABASE`.

  Some other database products draw a distinction. For example, in the Oracle Database product, a **schema** represents only a part of a database: the tables and other objects owned by a single user.
  See Also database, INFORMATION_SCHEMA, Performance Schema.

SDI
: Acronym for “serialized dictionary information”.
See Also Serialized Dictionary Information (SDI).

search index

In MySQL, **full-text search** queries use a special kind of index, the **FULLTEXT index**. In MySQL 5.6.4 and up, `InnoDB` and `MyISAM` tables both support `FULLTEXT` indexes; formerly, these indexes were only available for `MyISAM` tables.
See Also full-text search, FULLTEXT index.

secondary index

A type of `InnoDB` **index** that represents a subset of table columns. An `InnoDB` table can have zero, one, or many secondary indexes. (Contrast with the **clustered index**, which is required for each `InnoDB` table, and stores the data for all the table columns.)

A secondary index can be used to satisfy queries that only require values from the indexed columns. For more complex queries, it can be used to identify the relevant rows in the table, which are then retrieved through lookups using the clustered index.

Creating and dropping secondary indexes has traditionally involved significant overhead from copying all the data in the `InnoDB` table. The **fast index creation** feature makes both `CREATE INDEX` and `DROP INDEX` statements much faster for `InnoDB` secondary indexes.
See Also clustered index, Fast Index Creation, index.

segment

A division within an `InnoDB` **tablespace**. If a tablespace is analogous to a directory, the segments are analogous to files within that directory. A segment can grow. New segments can be created.

For example, within a **file-per-table** tablespace, table data is in one segment and each associated index is in its own segment. The **system tablespace** contains many different segments, because it can hold many tables and their associated indexes. Prior to MySQL 8.0, the system tablespace also includes one or more **rollback segments** used for **undo logs**.

Segments grow and shrink as data is inserted and deleted. When a segment needs more room, it is extended by one **extent** (1 megabyte) at a time. Similarly, a segment releases one extent's worth of space when all the data in that extent is no longer needed.
See Also extent, file-per-table, rollback segment, system tablespace, tablespace, undo log.

selectivity

A property of data distribution, the number of distinct values in a column (its **cardinality**) divided by the number of records in the table. High selectivity means that the column values are relatively unique, and can retrieved efficiently through an index. If you (or the query optimizer) can predict that a test in a `WHERE` clause only matches a small number (or proportion) of rows in a table, the overall **query** tends to be efficient if it evaluates that test first, using an index.
See Also cardinality, query.

semi-consistent read

A type of read operation used for `UPDATE` statements, that is a combination of **READ COMMITTED** and **consistent read**. When an `UPDATE` statement examines a row that is already locked, `InnoDB` returns the latest committed version to MySQL so that MySQL can determine whether the row matches the `WHERE` condition of the `UPDATE`. If the row matches (must be updated), MySQL reads the row again, and this time `InnoDB` either locks it or waits for a lock on it. This type of read operation can only happen when the transaction has the READ COMMITTED **isolation level**, or when the `innodb_locks_unsafe_for_binlog` option is enabled. `innodb_locks_unsafe_for_binlog` was removed in MySQL 8.0.
See Also consistent read, isolation level, READ COMMITTED.

SERIALIZABLE

The **isolation level** that uses the most conservative locking strategy, to prevent any other **transactions** from inserting or changing data that was read by this transaction, until it is finished. This way, the same query can be run over and over within a transaction, and be certain to retrieve the same set of results each time. Any attempt to change data that was committed by another transaction since the start of the current transaction, cause the current transaction to wait.

This is the default isolation level specified by the SQL standard. In practice, this degree of strictness is rarely needed, so the default isolation level for `InnoDB` is the next most strict, **REPEATABLE READ**.
See Also ACID, consistent read, isolation level, locking, REPEATABLE READ, transaction.

Serialized Dictionary Information (SDI)
Dictionary object metadata in serialized form. SDI is stored in `JSON` format.

As of MySQL 8.0.3, SDI is present in all `InnoDB` tablespace files except for temporary tablespace and undo tablespace files. The presence of SDI in tablespace files provides metadata redundancy. For example, dictionary object metadata can be extracted from tablespace files using the `ibd2sdi` utility if the data dictionary becomes unavailable.

For a `MyISAM` table, SDI is stored in a `.sdi` metadata file in the schema directory. An SDI metadata file is required to perform an `IMPORT TABLE` operation.
See Also file-per-table, general tablespace, system tablespace, tablespace.

server
A type of program that runs continuously, waiting to receive and act upon requests from another program (the **client**). Because often an entire computer is dedicated to running one or more server programs (such as a database server, a web server, an application server, or some combination of these), the term **server** can also refer to the computer that runs the server software.
See Also client, mysqld.

shared lock
A kind of **lock** that allows other **transactions** to read the locked object, and to also acquire other shared locks on it, but not to write to it. The opposite of **exclusive lock**.
See Also exclusive lock, lock, transaction.

shared tablespace
Another way of referring to the **system tablespace** or to a **general tablespace**. General tablespaces were introduced in MySQL 5.7
See Also general tablespace, system tablespace.

sharp checkpoint
The process of **flushing** to disk all **dirty** buffer pool pages whose redo entries are contained in certain portion of the **redo log**. Occurs before `InnoDB` reuses a portion of a log file; the log files are used in a circular fashion. Typically occurs with write-intensive **workloads**.
See Also dirty page, flush, redo log, workload.

shutdown
The process of stopping the MySQL server. By default, this process cleans up operations for **InnoDB** tables, so `InnoDB` can be **slow** to shut down, but fast to start up later. If you skip the cleanup operations, it is **fast** to shut down but the cleanup must be performed during the next restart.

The shutdown mode for `InnoDB` is controlled by the `innodb_fast_shutdown` option.
See Also fast shutdown, InnoDB, slow shutdown, startup.

slave server
Frequently shortened to “slave”. A database **server** machine in a **replication** scenario that receives changes from another server (the **master**) and applies those same changes. Thus it maintains the same contents as the master, although it might lag somewhat behind.

In MySQL, slave servers are commonly used in disaster recovery, to take the place of a master servers that fails. They are also commonly used for testing software upgrades and new settings, to ensure that database configuration changes do not cause problems with performance or reliability.

Slave servers typically have high workloads, because they process all the **DML** (write) operations relayed from the master, as well as user queries. To ensure that slave servers can apply changes from the master fast enough, they frequently have fast I/O devices and sufficient CPU and memory to run multiple database instances on the same slave server. For example, the master server might use hard drive storage while the slave servers use **SSD**s.

See Also DML, master server, replication, server, SSD.

slow query log
: A type of **log** used for performance tuning of SQL statements processed by the MySQL server. The log information is stored in a file. You must enable this feature to use it. You control which categories of "slow" SQL statements are logged. For more information, see Section 5.4.5, "The Slow Query Log".
See Also general query log, log.

slow shutdown
: A type of **shutdown** that does additional `InnoDB` flushing operations before completing. Also known as a **clean shutdown**. Specified by the configuration parameter `innodb_fast_shutdown=0` or the command `SET GLOBAL innodb_fast_shutdown=0;`. Although the shutdown itself can take longer, that time will be saved on the subsequent startup.
See Also clean shutdown, fast shutdown, shutdown.

snapshot
: A representation of data at a particular time, which remains the same even as changes are **committed** by other **transactions**. Used by certain **isolation levels** to allow **consistent reads**.
See Also commit, consistent read, isolation level, transaction.

sort buffer
: The buffer used for sorting data during creation of an `InnoDB` index. Sort buffer size is configured using the `innodb_sort_buffer_size` configuration option.

space ID
: An identifier used to uniquely identify an `InnoDB` **tablespace** within a MySQL instance. The space ID for the **system tablespace** is always zero; this same ID applies to all tables within the system tablespace or within a general tablespace. Each **file-per-table** tablespace and **general tablespace** has its own space ID.

  Prior to MySQL 5.6, this hardcoded value presented difficulties in moving `InnoDB` tablespace files between MySQL instances. Starting in MySQL 5.6, you can copy tablespace files between instances by using the **transportable tablespace** feature involving the statements `FLUSH TABLES ... FOR EXPORT`, `ALTER TABLE ... DISCARD TABLESPACE`, and `ALTER TABLE ... IMPORT TABLESPACE`. The information needed to adjust the space ID is conveyed in the **.cfg file** which you copy along with the tablespace. See Section 15.7.6, "Copying File-Per-Table Tablespaces to Another Instance" for details.
  See Also .cfg file, file-per-table, general tablespace, .ibd file, system tablespace, tablespace, transportable tablespace.

sparse file
: A type of file that uses file system space more efficiently by writing metadata representing empty blocks to disk instead of writing the actual empty space. The `InnoDB` **transparent page compression** feature relies on sparse file support. For more information, see Section 15.9.2, "InnoDB Page Compression".
See Also hole punching, transparent page compression.

spin
: A type of **wait** operation that continuously tests whether a resource becomes available. This technique is used for resources that are typically held only for brief periods, where it is more efficient to wait in a "busy loop" than to put the thread to sleep and perform a context switch. If the resource does not become available within a short time, the spin loop ceases and another wait technique is used.
See Also latch, lock, mutex, wait.

SQL
: The Structured Query Language that is standard for performing database operations. Often divided into the categories **DDL**, **DML**, and **queries**. MySQL includes some additional statement categories such as **replication**. See Chapter 9, *Language Structure* for the building blocks of SQL syntax, Chapter 11, *Data Types* for the data types to use for MySQL table columns, Chapter 13, *SQL Statement Syntax* for details about SQL statements and their associated categories, and Chapter 12, *Functions and Operators* for standard and MySQL-specific functions to use in queries.
See Also DDL, DML, query, replication.

SSD

Acronym for “solid-state drive”. A type of storage device with different performance characteristics than a traditional hard disk drive (**HDD**): smaller storage capacity, faster for random reads, no moving parts, and with a number of considerations affecting write performance. Its performance characteristics can influence the throughput of a **disk-bound** workload.
See Also disk-bound, HDD.

startup

The process of starting the MySQL server. Typically done by one of the programs listed in Section 4.3, “MySQL Server and Server-Startup Programs”. The opposite of **shutdown**.
See Also shutdown.

statement-based replication

A form of **replication** where SQL statements are sent from the **master server** and replayed on the **slave server**. It requires some care with the setting for the `innodb_autoinc_lock_mode` option, to avoid potential timing problems with **auto-increment locking**.
See Also auto-increment locking, innodb_autoinc_lock_mode, master server, replication, row-based replication, slave server.

statistics

Estimated values relating to each `InnoDB` **table** and **index**, used to construct an efficient **query execution plan**. The main values are the **cardinality** (number of distinct values) and the total number of table rows or index entries. The statistics for the table represent the data in its **primary key** index. The statistics for a **secondary index** represent the rows covered by that index.

The values are estimated rather than counted precisely because at any moment, different **transactions** can be inserting and deleting rows from the same table. To keep the values from being recalculated frequently, you can enable **persistent statistics**, where the values are stored in `InnoDB` system tables, and refreshed only when you issue an `ANALYZE TABLE` statement.

You can control how **NULL** values are treated when calculating statistics through the `innodb_stats_method` configuration option.

Other types of statistics are available for database objects and database activity through the **INFORMATION_SCHEMA** and **PERFORMANCE_SCHEMA** tables.
See Also cardinality, index, INFORMATION_SCHEMA, NULL, Performance Schema, persistent statistics, primary key, query execution plan, secondary index, table, transaction.

stemming

The ability to search for different variations of a word based on a common root word, such as singular and plural, or past, present, and future verb tense. This feature is currently supported in `MyISAM` **full-text search** feature but not in **FULLTEXT indexes** for `InnoDB` tables.
See Also full-text search, FULLTEXT index.

stopword

In a **FULLTEXT index**, a word that is considered common or trivial enough that it is omitted from the **search index** and ignored in search queries. Different configuration settings control stopword processing for `InnoDB` and `MyISAM` tables. See Section 12.9.4, “Full-Text Stopwords” for details.
See Also FULLTEXT index, search index.

storage engine

A component of the MySQL database that performs the low-level work of storing, updating, and querying data. In MySQL 5.5 and higher, **InnoDB** is the default storage engine for new tables, superceding `MyISAM`. Different storage engines are designed with different tradeoffs between factors such as memory usage versus disk usage, read speed versus write speed, and speed versus robustness. Each storage engine manages specific tables, so we refer to `InnoDB` tables, `MyISAM` tables, and so on.

The **MySQL Enterprise Backup** product is optimized for backing up `InnoDB` tables. It can also back up tables handled by `MyISAM` and other storage engines.

See Also InnoDB, MySQL Enterprise Backup, table type.

stored generated column
A column whose values are computed from an expression included in the column definition. Column values are evaluated and stored when rows are inserted or updated. A stored generated column requires storage space and can be indexed.

Contrast with **virtual generated column**.
See Also base column, generated column, virtual generated column.

strict mode
The general name for the setting controlled by the `innodb_strict_mode` option. Turning on this setting causes certain conditions that are normally treated as warnings, to be considered errors. For example, certain invalid combinations of options related to **file format** and **row format**, that normally produce a warning and continue with default values, now cause the `CREATE TABLE` operation to fail. `innodb_strict_mode` is enabled by default in MySQL 5.7.

MySQL also has something called strict mode. See Section 5.1.10, “Server SQL Modes”.
See Also file format, innodb_strict_mode, row format.

sublist
Within the list structure that represents the **buffer pool**, pages that are relatively old and relatively new are represented by different portions of the **list**. A set of parameters control the size of these portions and the dividing point between the new and old pages.
See Also buffer pool, eviction, list, LRU.

supremum record
A **pseudo-record** in an index, representing the **gap** above the largest value in that index. If a transaction has a statement such as `SELECT ... FROM ... WHERE col > 10 FOR UPDATE;`, and the largest value in the column is 20, it is a lock on the supremum record that prevents other transactions from inserting even larger values such as 50, 100, and so on.
See Also gap, infimum record, pseudo-record.

surrogate key
Synonym name for **synthetic key**.
See Also synthetic key.

synthetic key
An indexed column, typically a **primary key**, where the values are assigned arbitrarily. Often done using an **auto-increment** column. By treating the value as completely arbitrary, you can avoid overly restrictive rules and faulty application assumptions. For example, a numeric sequence representing employee numbers might have a gap if an employee was approved for hiring but never actually joined. Or employee number 100 might have a later hiring date than employee number 500, if they left the company and later rejoined. Numeric values also produce shorter values of predictable length. For example, storing numeric codes meaning “Road”, “Boulevard”, “Expressway”, and so on is more space-efficient than repeating those strings over and over.

Also known as a **surrogate key**. Contrast with **natural key**.
See Also auto-increment, natural key, primary key, surrogate key.

system tablespace
One or more data files (**ibdata files**) containing the metadata for `InnoDB`-related objects, and the storage areas for the **change buffer**, and the **doublewrite buffer**. It may also contain table and index data for `InnoDB` tables if tables were created in the system tablespace instead of **file-per-table** or **general tablespaces**. The data and metadata in the system tablespace apply to all **databases** in a MySQL **instance**.

Prior to MySQL 5.6.7, the default was to keep all `InnoDB` tables and indexes inside the system tablespace, often causing this file to become very large. Because the system tablespace never shrinks, storage problems could arise if large amounts of temporary data were loaded and then deleted. In MySQL 8.0, the default is **file-per-table** mode, where each table and its associated indexes are stored in a separate **.ibd file**. This

default makes it easier to use InnoDB features that rely on DYNAMIC and COMPRESSED row formats, such as table **compression**, efficient storage of **off-page columns**, and large index key prefixes.

Keeping all table data in the system tablespace or in separate .ibd files has implications for storage management in general. The **MySQL Enterprise Backup** product might back up a small set of large files, or many smaller files. On systems with thousands of tables, the file system operations to process thousands of .ibd files can cause bottlenecks.

InnoDB introduced general tablespaces in MySQL 5.7.6, which are also represented by .ibd files. General tablespaces are shared tablespaces created using CREATE TABLESPACE syntax. They can be created outside of the MySQL data directory, are capable of holding multiple tables, and support tables of all row formats.
See Also change buffer, compression, data dictionary, database, doublewrite buffer, dynamic row format, file-per-table, general tablespace, .ibd file, ibdata file, innodb_file_per_table, instance, MySQL Enterprise Backup, off-page column, tablespace, undo log.

T

table
Each MySQL table is associated with a particular **storage engine**. **InnoDB** tables have particular **physical** and **logical** characteristics that affect performance, **scalability**, **backup**, administration, and application development.

In terms of file storage, an InnoDB table belongs to one of the following tablespace types:

- The shared InnoDB **system tablespace**, which is comprised of one or more **ibdata files**.
- A **file-per-table** tablespace, comprised of an individual **.ibd file**.
- A shared **general tablespace**, comprised of an individual .ibd file. General tablespaces were introduced in MySQL 5.7.6.

.ibd data files contain both table and **index** data.

InnoDB tables created in file-per-table tablespaces can use **DYNAMIC** or **COMPRESSED** row format. These row formats enable InnoDB features such as **compression**, efficient storage of **off-page columns**, and large index key prefixes. General tablespaces support all row formats.

The system tablespace supports tables that use **REDUNDANT**, **COMPACT**, and **DYNAMIC** row formats. System tablespace support for the **DYNAMIC** row format was added in MySQL 5.7.6.

The **rows** of an InnoDB table are organized into an index structure known as the **clustered index**, with entries sorted based on the **primary key** columns of the table. Data access is optimized for queries that filter and sort on the primary key columns, and each index contains a copy of the associated primary key columns for each entry. Modifying values for any of the primary key columns is an expensive operation. Thus an important aspect of InnoDB table design is choosing a primary key with columns that are used in the most important queries, and keeping the primary key short, with rarely changing values.
See Also backup, clustered index, compact row format, compressed row format, compression, dynamic row format, Fast Index Creation, file-per-table, .ibd file, index, off-page column, primary key, redundant row format, row, system tablespace, tablespace.

table lock
A lock that prevents any other **transaction** from accessing a table. InnoDB makes considerable effort to make such locks unnecessary, by using techniques such as **online DDL**, **row locks** and **consistent reads** for processing **DML** statements and **queries**. You can create such a lock through SQL using the LOCK TABLE statement; one of the steps in migrating from other database systems or MySQL storage engines is to remove such statements wherever practical.
See Also consistent read, DML, lock, locking, online DDL, query, row lock, table, transaction.

table scan
See full table scan.

table statistics
See statistics.

table type
Obsolete synonym for **storage engine**. We refer to `InnoDB` tables, `MyISAM` tables, and so on.
See Also InnoDB, storage engine.

tablespace
A data file that can hold data for one or more `InnoDB` **tables** and associated **indexes**.

The **system tablespace** contains the `InnoDB` **data dictionary**, and prior to MySQL 5.6 holds all other `InnoDB` tables by default.

The `innodb_file_per_table` option, enabled by default in MySQL 5.6 and higher, allows tables to be created in their own tablespaces. File-per-table tablespaces support features such as efficient storage of **off-page columns**, table compression, and transportable tablespaces. See Section 15.7.4, "InnoDB File-Per-Table Tablespaces" for details.

`InnoDB` introduced general tablespaces in MySQL 5.7.6. General tablespaces are shared tablespaces created using `CREATE TABLESPACE` syntax. They can be created outside of the MySQL data directory, are capable of holding multiple tables, and support tables of all row formats.

MySQL NDB Cluster also groups its tables into tablespaces. See NDB Cluster Disk Data Objects for details.
See Also compressed row format, data dictionary, data files, file-per-table, general tablespace, index, innodb_file_per_table, system tablespace, table.

temporary table
A **table** whose data does not need to be truly permanent. For example, temporary tables might be used as storage areas for intermediate results in complicated calculations or transformations; this intermediate data would not need to be recovered after a crash. Database products can take various shortcuts to improve the performance of operations on temporary tables, by being less scrupulous about writing data to disk and other measures to protect the data across restarts.

Sometimes, the data itself is removed automatically at a set time, such as when the transaction ends or when the session ends. With some database products, the table itself is removed automatically too.
See Also table.

temporary tablespace
The tablespace for non-compressed `InnoDB` **temporary tables** and related objects, introduced in MySQL 5.7. The `innodb_temp_data_file_path` configuration file option defines the relative path, name, size, and attributes for temporary tablespace data files. If `innodb_temp_data_file_path` is not specified, the default behavior is to create a single auto-extending 12MB data file named `ibtmp1` in the data directory. The temporary tablespace is recreated on each server start and receives a dynamically generated **space ID**. The temporary tablespace cannot reside on a raw device. Startup is refused if the temporary tablespace cannot be created.

The temporary tablespace is removed on normal shutdown or on an aborted initialization. The temporary tablespace is not removed when a crash occurs. In this case, the database administrator may remove the temporary tablespace manually or restart the server with the same configuration, which removes and recreates the temporary tablespace.
See Also ibtmp file, space ID, system tablespace, temporary table.

text collection
The set of columns included in a **FULLTEXT index**.
See Also FULLTEXT index.

thread
A unit of processing that is typically more lightweight than a **process**, allowing for greater **concurrency**.
See Also concurrency, master thread, process, Pthreads.

torn page
An error condition that can occur due to a combination of I/O device configuration and hardware failure. If data is written out in chunks smaller than the `InnoDB` **page size** (by default, 16KB), a hardware failure while writing could result in only part of a page being stored to disk. The `InnoDB` **doublewrite buffer** guards against this possibility.
See Also doublewrite buffer.

TPS
Acronym for "**transactions** per second", a unit of measurement sometimes used in benchmarks. Its value depends on the **workload** represented by a particular benchmark test, combined with factors that you control such as the hardware capacity and database configuration.
See Also transaction, workload.

transaction
Transactions are atomic units of work that can be **committed** or **rolled back**. When a transaction makes multiple changes to the database, either all the changes succeed when the transaction is committed, or all the changes are undone when the transaction is rolled back.

Database transactions, as implemented by `InnoDB`, have properties that are collectively known by the acronym **ACID**, for atomicity, consistency, isolation, and durability.
See Also ACID, commit, isolation level, lock, rollback.

transaction ID
An internal field associated with each **row**. This field is physically changed by `INSERT`, `UPDATE`, and `DELETE` operations to record which **transaction** has locked the row.
See Also implicit row lock, row, transaction.

transparent page compression
A feature added in MySQL 5.7.8 that permits page-level compression for `InnoDB` tables that reside in **file-per-table** tablespaces. Page compression is enabled by specifying the `COMPRESSION` attribute with `CREATE TABLE` or `ALTER TABLE`. For more information, see Section 15.9.2, "InnoDB Page Compression".
See Also file-per-table, hole punching, sparse file.

transportable tablespace
A feature that allows a **tablespace** to be moved from one instance to another. Traditionally, this has not been possible for `InnoDB` tablespaces because all table data was part of the **system tablespace**. In MySQL 5.6 and higher, the `FLUSH TABLES ... FOR EXPORT` syntax prepares an `InnoDB` table for copying to another server; running `ALTER TABLE ... DISCARD TABLESPACE` and `ALTER TABLE ... IMPORT TABLESPACE` on the other server brings the copied data file into the other instance. A separate **.cfg file**, copied along with the **.ibd file**, is used to update the table metadata (for example the **space ID**) as the tablespace is imported. See Section 15.7.6, "Copying File-Per-Table Tablespaces to Another Instance" for usage information.
See Also .cfg file, .ibd file, space ID, system tablespace, tablespace.

troubleshooting
The process of determining the source of a problem. Some of the resources for troubleshooting MySQL problems include:

- Section 2.9.2.1, "Troubleshooting Problems Starting the MySQL Server"
- Section 6.2.9, "Troubleshooting Problems Connecting to MySQL"
- Section B.5.3.2, "How to Reset the Root Password"
- Section B.5.2, "Common Errors When Using MySQL Programs"
- Section 15.20, "InnoDB Troubleshooting".

truncate
A **DDL** operation that removes the entire contents of a table, while leaving the table and related indexes intact. Contrast with **drop**. Although conceptually it has the same result as a `DELETE` statement with no

`WHERE` clause, it operates differently behind the scenes: `InnoDB` creates a new empty table, drops the old table, then renames the new table to take the place of the old one. Because this is a DDL operation, it cannot be **rolled back**.

If the table being truncated contains **foreign keys** that reference another table, the truncation operation uses a slower method of operation, deleting one row at a time so that corresponding rows in the referenced table can be deleted as needed by any `ON DELETE CASCADE` clause. (MySQL 5.5 and higher do not allow this slower form of truncate, and return an error instead if foreign keys are involved. In this case, use a `DELETE` statement instead.
See Also DDL, drop, foreign key, rollback.

tuple
A technical term designating an ordered set of elements. It is an abstract notion, used in formal discussions of database theory. In the database field, tuples are usually represented by the columns of a table row. They could also be represented by the result sets of queries, for example, queries that retrieved only some columns of a table, or columns from joined tables.
See Also cursor.

two-phase commit
An operation that is part of a distributed **transaction**, under the **XA** specification. (Sometimes abbreviated as 2PC.) When multiple databases participate in the transaction, either all databases **commit** the changes, or all databases **roll back** the changes.
See Also commit, rollback, transaction, XA.

U

undo
Data that is maintained throughout the life of a **transaction**, recording all changes so that they can be undone in case of a **rollback** operation. It is stored in the **undo log** either within the **system tablespace** or in separate **undo tablespaces**. As of MySQL 8.0, undo logs reside in undo tablespaces by default.
See Also rollback, rollback segment, system tablespace, transaction, undo log, undo tablespace.

undo buffer
See undo log.

undo log
A storage area that holds copies of data modified by active **transactions**. If another transaction needs to see the original data (as part of a **consistent read** operation), the unmodified data is retrieved from this storage area.

In MySQL 5.6 and higher, you can use the `innodb_undo_tablespaces` to create undo logs in **undo tablespaces**, optionally stored on another storage device such as an **SSD**. In MySQL 8.0, undo logs reside in undo tablespaces by default.

The undo log is split into separate portions, the **insert undo buffer** and the **update undo buffer**.
See Also consistent read, rollback segment, SSD, system tablespace, transaction, undo tablespace.

undo log segment
A collection of **undo logs**. Undo log segments exists within **rollback segments**. An undo log segment might contain undo logs from multiple transactions. An undo log segment can only be used by one transaction at a time but can be reused after it is released at transaction **commit** or **rollback**. May also be referred to as an “undo segment”.
See Also commit, rollback, rollback segment, undo log.

undo tablespace
An undo tablespace contains **undo logs**. Undo logs exist within **undo log segments**, which are contained within **rollback segments**. Rollback segments have traditionally resided in the system tablespace. As of MySQL 5.6, rollback segments can reside in undo tablespaces. The number of undo tablespaces is controlled by the `innodb_undo_tablespaces` configuration option.

For more information, see Section 15.7.8, “Configuring Undo Tablespaces”.
See Also rollback segment, system tablespace, undo log, undo log segment.

unique constraint
A kind of **constraint** that asserts that a column cannot contain any duplicate values. In terms of **relational** algebra, it is used to specify 1-to-1 relationships. For efficiency in checking whether a value can be inserted (that is, the value does not already exist in the column), a unique constraint is supported by an underlying **unique index**.
See Also constraint, relational, unique index.

unique index
An index on a column or set of columns that have a **unique constraint**. Because the index is known not to contain any duplicate values, certain kinds of lookups and count operations are more efficient than in the normal kind of index. Most of the lookups against this type of index are simply to determine if a certain value exists or not. The number of values in the index is the same as the number of rows in the table, or at least the number of rows with non-null values for the associated columns.

Change buffering optimization does not apply to unique indexes. As a workaround, you can temporarily set `unique_checks=0` while doing a bulk data load into an `InnoDB` table.
See Also cardinality, change buffering, unique constraint, unique key.

unique key
The set of columns (one or more) comprising a **unique index**. When you can define a `WHERE` condition that matches exactly one row, and the query can use an associated unique index, the lookup and error handling can be performed very efficiently.
See Also cardinality, unique constraint, unique index.

V

variable-length type
A data type of variable length. `VARCHAR`, `VARBINARY`, and `BLOB` and `TEXT` types are variable-length types.

`InnoDB` treats fixed-length fields greater than or equal to 768 bytes in length as variable-length fields, which can be stored **off-page**. For example, a `CHAR(255)` column can exceed 768 bytes if the maximum byte length of the character set is greater than 3, as it is with `utf8mb4`.
See Also off-page column, overflow page.

victim
The **transaction** that is automatically chosen to be **rolled back** when a **deadlock** is detected. `InnoDB` rolls back the transaction that has updated the fewest rows.

Deadlock detection can be disabled using the `innodb_deadlock_detect` configuration option.
See Also deadlock, deadlock detection, innodb_lock_wait_timeout, transaction.

virtual column
See virtual generated column.

virtual generated column
A column whose values are computed from an expression included in the column definition. Column values are not stored, but are evaluated when rows are read, immediately after any `BEFORE` triggers. A virtual generated column takes no storage. `InnoDB` supports secondary indexes on virtual generated columns.

Contrast with **stored generated column**.
See Also base column, generated column, stored generated column.

virtual index
A virtual index is a **secondary index** on one or more **virtual generated columns** or on a combination of virtual generated columns and regular columns or stored generated columns. For more information, see Section 13.1.18.9, “Secondary Indexes and Generated Columns”.
See Also secondary index, stored generated column, virtual generated column.

W

wait
: When an operation, such as acquiring a **lock**, **mutex**, or **latch**, cannot be completed immediately, `InnoDB` pauses and tries again. The mechanism for pausing is elaborate enough that this operation has its own name, the **wait**. Individual threads are paused using a combination of internal `InnoDB` scheduling, operating system `wait()` calls, and short-duration **spin** loops.

  On systems with heavy load and many transactions, you might use the output from the `SHOW INNODB STATUS` command or **Performance Schema** to determine whether threads are spending too much time waiting, and if so, how you can improve **concurrency**.
  See Also concurrency, latch, lock, mutex, Performance Schema, spin.

warm backup
: A **backup** taken while the database is running, but that restricts some database operations during the backup process. For example, tables might become read-only. For busy applications and websites, you might prefer a **hot backup**.
  See Also backup, cold backup, hot backup.

warm up
: To run a system under a typical **workload** for some time after startup, so that the **buffer pool** and other memory regions are filled as they would be under normal conditions. This process happens naturally over time when a MySQL server is restarted or subjected to a new workload.

  Typically, you run a workload for some time to warm up the buffer pool before running performance tests, to ensure consistent results across multiple runs; otherwise, performance might be artificially low during the first run.

  In MySQL 5.6, you can speed up the warmup process by enabling the `innodb_buffer_pool_dump_at_shutdown` and `innodb_buffer_pool_load_at_startup` configuration options, to bring the contents of the buffer pool back into memory after a restart. These options are enabled by default in MySQL 5.7. See Section 15.6.3.8, “Saving and Restoring the Buffer Pool State”.
  See Also buffer pool, workload.

workload
: The combination and volume of **SQL** and other database operations, performed by a database application during typical or peak usage. You can subject the database to a particular workload during performance testing to identify **bottlenecks**, or during capacity planning.
  See Also bottleneck, CPU-bound, disk-bound, SQL.

write combining
: An optimization technique that reduces write operations when **dirty pages** are **flushed** from the `InnoDB` **buffer pool**. If a row in a page is updated multiple times, or multiple rows on the same page are updated, all of those changes are stored to the data files in a single write operation rather than one write for each change.
  See Also buffer pool, dirty page, flush.

X

XA
: A standard interface for coordinating distributed **transactions**, allowing multiple databases to participate in a transaction while maintaining **ACID** compliance. For full details, see Section 13.3.8, “XA Transactions”.

  XA Distributed Transaction support is enabled by default. If you are not using this feature, you can disable the `innodb_support_xa` configuration option, avoiding the performance overhead of an extra fsync for each transaction.

  As of MySQL 5.7.10, disabling `innodb_support_xa` is not permitted as it makes replication unsafe and prevents performance gains associated with **binary log** group commit. The `innodb_support_xa` configuration option is removed in MySQL 8.0.

See Also ACID, binary log, commit, transaction, two-phase commit.

Y

young
: A characteristic of a **page** in the `InnoDB` **buffer pool** meaning it has been accessed recently, and so is moved within the buffer pool data structure, so that it will not be **flushed** soon by the **LRU** algorithm. This term is used in some **INFORMATION_SCHEMA** column names of tables related to the buffer pool.
See Also buffer pool, flush, INFORMATION_SCHEMA, LRU, page.
